### Why the Magazine of Mysteries is Successful

Became it Inspires Hope, Courage and New Lafe: Its ditor and the Mystic Adepts who help him are all cheerful, happy, healthy and prosperous

We all love humanity in the broadest sense, and our love makes us workers on the universal plane.

We are optimistic and see the good in the world rath than the bad. We know that the goal of each soul is the same; that

some time and somewhere man will realize his oneness with the Great One-God- and he then eternally joyful.

We try to impress the minds of our readers with the truth that they can ell have peace and happiness here and now. We know that the Great Father is all Love, all geotle-

ners, all kindness and ell tender mercy, ever ready to take us gently by the hand end lead ue in the path of Light and Truth, if we but open our minds and our hearts to Him We know that the blessed angels are ever near, trying to

reach out to us and help us, and this is what we persistently and patiently tell all of our readers. We lurther know that these very angels are constantly

helping us with their messages in making this Magazine a beacon of light to the sad and sorrowful; its every page vibrates with the truth of this statement,

No use can read this Megasine of Mysteries without feeling the high vibrations of our couls and also the vibrations of thuse souls who have passed on to the Brighter Spheres who still, through their tremendous lose for hus manity, choose to work through us as mediums

We thrill our readers with vibrations of joy and happiness, and each issue inspires thousands of readers to live nobler and grander lives

Most of our readers are delighted to spread broadcast this higher thought, and to that end send as many subscribers, A COLLEGE AND SEMINARY FOR WOMEN so that with the January issue, to fill all the demands of OXFORD, OHIO. newsdealers and subscribers, there were printed an one

Think of it ? 30,000 copies at the end of nine months ? Was there ever such a success in the history of a maga sine published along these lines?

Surely this is the Soulful Age ! This is the Age when souls are seeking as never before

for the true Psychic Light. This is the Twentieth-Century Magazine. Ten years ago the greet success we have achieved would

not have been possible. LEILA S. McKEE, Ph.D., President Our tremendous success clearly shows that a greet spiritual wave is eweeping over the planet, and that et last souls are reaching out into the great Unknown world, for Truth

it further demonstrates that the age of bigotry and intolerance has gone; that under the hiase of the Higher Thought man is no longer to be a slave to fear, doubt and

The brotherhood of man and the Fatherhood of God are he realized under the new order of things.

The success of this Magazine speaks volumes to the thinking and observing ones who desire peace and harmony

in this world. Buy a copy of the January issue on the news-stands. Read It and see if you are not filled with enthusiasm and

hope. If your newsdealer does not keep it send to centa e copy, or 25 cents for three months subscription to the Magazine of Mysteries, 22 North William Street, New York. It will be a treat to you, Thoughtful people all over the world are interested in

our Magazine. On the 20th of December yearly subscriptions were received from England (e), Germany (1), India (1) and New South Wales (3).

## THE QUESTION OF EXPENSE

Has never influenced the makers of the "Standard Dictionary," Originally costing over \$1,000,000, it all fields of thought. These men have brought all their faculities to bear upon the presents the highest them, and consequently their work stands, not as the scattered effort of a few men engaged upon a multitude of subjects, but the concise, specialized thought of authorities in their own field.

The "Standard" was not built for a year, for a decade—it will last for generations. Its information is brought down to the present time. You may now secure

## THE STANDARD \$2.00 DICTIONARY FOR

the remainder in easy payments. This is our offer made in last week's DIGEST and which we now repeat. Fill out the square coupon in right-hand corner of page and mail it to us; we will then enroll you as a member of the Washington Educational League. When we have secured a sufficient number of subscribers to assure us of the success of the offer, we will notify you; at which time you may forward \$2.000, and the two-volume full Russia 2010. Century Edition will be sent you at once-transpain prepaid by us. The remainder (\$20.00) may be paid in small monthly instalments of \$2.00 each—about 7 cents per day. In no case will you be required to send any money before January 20, 1902.

This offer extends to February 22, 1902 (Washington's Birthday).

#### TOPICS OF THE DAY.

#### PANAMA OR NICARAGUA?

NEW aspect has been given to the isthmian canal situation by the meeting of the Panama Canal stockholders in Paris at which, it is reported, the opinion prevailed that the United States should be invited to buy the canal at any price in order to save some of the money invested. A resolution was adopted by an "almost unanimous vote" declaring that "we are prepared to set aside the valuations which have been considered as the price asked and have been judged unacceptable, and offer to take as a basis and point of departure of the discussion we solicit, the figures and declarations contained in the conclusions of the (United States) Isthmian commission's report." Our commission, it will be recalled, thought that the completed work, rights, etc., of the Panama company were worth about \$40,000,000. President Hutin, of the Panama company, thought they were worth \$109,000,000, a figure that our commission considered "so unreasonable that its acceptance can not be recommended." The price, indeed, seemed to be the principal reason advanced by the commission, in its report, for recommending the Nicaragua ronte, and now that the Panama company has forced M. Hntin's resignation and shows a disposition to sell at any reasonable figure, a number of influential American newspapers are urging that the question of route be reopened and the Panama claims be given another hearing. Other papers of considerable weight think that we have had too much delay now, that the Panama negotlators have sinned away their day of grace, and that Congress should pass one of the Nicaragua Canal bills now before it, and the work be started at once. Says the Philadelphia Proce .

"The American people want a canal uniting the Atlantic and Pacific oceans. They have patiently waited while investiga-

tions have icen made and the question discussed in all its bearings. They now want action. If the Panama scheme is the better one and it can be carried out as cheaply as the Nicaragas scheme, they will approve its adoption. If not, not. But one thing they do not want and will not have, and that is more deally. It is action prompt and effective that se demanded. He world war should end and the work of building a canal begin without unnecessary delay.

"The trouble is, the Panama people are saying all this too late," declares the Pittsburg Gazette, and the New York Mail and Express agrees that "the time has gone by for dealing with them," and "they should not be permitted to interpose new hinthrances at Washington." "Their case would receive little consideration," thinks the San Francisco Chronicle, "were not the transcontinental railroads behind them." a suspicion that occurs also to the Washington Star, which declares that "the whole play is for delay, for a postponement to another session, in the hope that perhaps next year some greater project may intervene to prevent action. Advocacy of the acceptance of the Panama offer at this stage of the case can only be interpreted as a blow at all canal construction," The San Diego Union says: "The entire Panama scheme has been tainted with failure and fraud for many years The recent exposé of the methods followed by M. Hutin in his dickerings at Washington have made the project more obnoxious than ever to the people of this country. An isthmian canal is needed, and will be huilt; but it is not necessary, in order to accomplish that end, to buy a fiasco encumbered with all sorts of international complications." On the other side. The News and Courier, of Charleston, S. C., a port where a keen interest is taken in the canal project, declares that "the only proper place for the canal is at Panama," a view shared by the Chicago Record-Herald, which says: "From a purely engineering point of view it seems like a piece of consummate folly to dig a canal 190 miles long, utilizing a lake whose sand bottom is shifting and uncertain, when another route only 46 miles long, in which 40 per cent, of the excavation has been done, is offered upon terms that will insure this Government absolute ownership and control of the water-way and at a price which will keep the total cost within the estimated cost of the longer route." "Happily," says the New York Evening Post, "it is not too late for sober reconsideration,"and it seems to the Boston Herald that matters have not gone so far as to prevent the acceptance of a good proposition. The Pittsburg Dispatch suspects that "some interest especially to be benefited by the Nicaraguan project" is behind the opposition to the l'anama offer. The Baltimore Sun says:

"There is no need of hurry; the commerce of the country will not suffer because of a short delay in the construction of an Interoceanic waterway. It is essential to the success of the project that the shortest and most practicable route should be selected. If the French shareholders in the Panama company are willing to sell their property on reasonable terms, their proposition ought to be carefully investigated. A little care and discretion before the United States is committed irrevocably to any route may save this Government many millions of dollars."

The respective advantages of the two routes are reviewed as follows by the Chicago News;

"Owing to its greater length, the nature of the channel, and the cost of maintaining locks, the annual expense of the Nicaragua route is estimated at from \$1,350,000 to \$2,000,000 a year greater than that of the Panama waterway.

"Length: Nicaragua route, 190 niles; Panama route, 47 miles. Deducting the 59 miles across Lake Nicaragua where vessels may travel at full speed, the Nicaragua channel is 13 miles long, a difference of 84 miles in favor of the Panama route.

"The Nicaragua route is alout 500 miles the shorter for vessels sailing from Atlantic to North American Pacific ports. From the Pacific ports of South America to the Atlantic ports thereof the Panama route is about 400 miles the shorter. The Nicaragua route is two or three days' sailing nearer the United States for steam vessels. For sailing vessels the Nicaragua route is from four to fourteen days nearer to Sau Francisco.

"Time of construction: An estimated advantage of two years in favor of Nicaragna.

"Health and climate: Nicaragua slightly cooler and climate somewhat more salubrious.

"There are fair harbors at both ends of the Panama route. Construction of Nicaragua harbors would be necessary, but that is already included in the estimate of cost.

"Several short curves on the Nicaragua route will impede navigation and give an advantage estimated to be worth \$2,000,000 in favor of the Panama route.

"It will be seen that something is to be said on both sides. Arthur P. Davis, the chief hydrographer of the isthmian canal commission, making an estimate based upon a computation not only of cost but of the cash value of relative advantages to commerce, has figured an advantage of \$35,400,000 in favor of the Panama route. The commission report just returned, however, avers that these advantages are offset by the superior facilities of the Nicaragua waterway for American shipping. Moreover, the commission estimated the cost of construction at only \$189,-000,000 in the case of Nicaragna and \$253,000,000 in the case of Panama, basing this estimate on the ground that the Panama work already done, for which the French company now claims \$109,000,000, is actually worth only \$40,000,000. Doubtless if the French company had been content to ask a lower price the Panama channel would have much better chauces of consideration than it has at present."

An Exclusively American Exposition in London.—According to an advertisement that appeared a few works ago, an exposition, exclusively American, is to be held at the Crystal Palace in London from May 1 to November 1, 1992. The projectors of the enterprise say:

"It is intended to demonstrate the immense commercial development which has taken place in the United States during recent years, and will be the largest and most important exposition of exclusively American exhibits ever assembled outside this country.

"It will afford a unique opportunity to American manufacturers seeking to further their export business, as coronation year will draw to the British metropolis the greatest number of pro vincial and foreign visitors ever before known.

"The exhibition will be held under the auspices of the American Society of Loudon, which is composed of the most prominent American residents in England. The advisory committee includes the Lord Mayor of London. Sir Thomas Lipton, Sir Dudley Baines Forwood, and Sir Douglas Fox.

A correspondent writing from the London office of The Iron Age (New York) says:

"It is yet early to prophesy which section of American trade will be most prominent, but, judging by the number of contrast for space taken out by American metal-working firms, there can be little doubt that the iron and setel trades of America, both heavy and light, will be well represented. The value of these exhibitions naturally depends upon the number of exhibitors. In this instance the exhibition is absolutely unique, for it is to be a substantial of the substantial of the substantial of the best in London. The period over which the exhibition will extend is admirably chosen, for it clashes with no other of any impertance. "The decision to hold the exhibition in the grounds of the Crystal Palace is, on the whole, a wise one. The directors of this beautiful edifice have for some time past been steadily cultivating exhibitions of one sort and another; cycles, shoe and leather, naval and military, and other interests and trades have during the past two years found temporary lodgment under the glass dome of the Crystal Palace. The building alone covers to acres, well lighted, heated, and ventitated, while it is surrounded by ornamental grounds extending over zoo acres. During the summer months about 2,000, zoo people visit the Crystal Palace with the Crystal Palace was built to house the great laternational Exhibition of 1851, so that in most respects, at any rate, the Crystal Palace was built to brupes."

### SUGAR AND TOBACCO JOURNALS ON COLONIAL TARIFFS.

THE tobacco interests seem to be much less alarmed over the prospect of reciprocity or free trade with Cuba and the Philippines than are the sugar interests. The New Orleans Times-Democrat, published in the Louisiana cane-sugar region, says: "Let Cuban sugar pay the duty it has been paying. If it could do so under the oppressive government of Spain, when taxation was so heavy, it can do so to-day, and even if the sugar trust does not get its Chban sugar in free, it is safe to say that it will not lose money. There is no reason in the world why any American industry should be sacrificed either to Cuba or the sugar trust." The New Orleans Sugar Planters' Journal says similarly:

"There has been displayed, we regret to say, a tack of sufficient aggressiveness on the part of the sugar planters of this State as regards opposing the netarious attempt of the sugar trust to grant Chat free admittance of sugars to this country and so tend to ruin the domestic sugar industry. This is the time for action. A number of planters have suggested that as there is a surplus in the treasury of the Louisiana Sugar Planters' Association, it is could be put to no better use than to spend it in the sending on to Washington of some of our representative sugar planters, members of both parties, and keeping them there until the deathknell has been sounded over the trust's aspirations to foist free Cuban sugar on us."

The tobacco papers look at the situation with more equanimity. The Washington correspondent of The United States Tobacco Journal (New York) calls attention to the new tariff bill for the Philippines, in which the full Dingley rates are set up between those islands and the States, and remarks that "with this fact in mind, the annexation free-trade Cubau bugaboo will lose its terrors in the mind of every sensible business man throughout the country." Tobacco (New York), however, calls to mind rather the case of Porto Rico, whose products are now admitted duty free, and counsels acquiescence in reciprocity or lower tariff rates in the hope that such conciliatory measures will make the Cubans contented with independence and stop the agritation for annexation. "The cigar manufacturers," it avers, "would rather bear the ills' of a lower tariff on Cuban cigars and tobacco than do anything that might hasten the day when Cuban products would come into this country free, like those from Porto Rico." The Danville (Va.) Tobacco Journal says that tobacco can be raised much cheaper in the United States than in Cuba, and that "even with a fifty-per-cent, reduction in the specific duty and the abolishing of the ad value on duty, American cigars would have an advantage of \$23 a thousand over Cuban eigars." The Southern Tobacconist, of Richmond, Va., says:

"We are told by those who should know best whereof they speak that all the Havana tobacco made in Cuba coming free into this country would not materially reduce the profits of the increasing home product or factories, but would on the contrary rather enhance both in value, because the more Havana at cheaper prices the more blending with our domestic tobacco, and the the latter and cheaper eigens would find greater demand and causer better business; if this is relatively so as regards Cuba and United States tobacco, it holds all the better to the good, so to say, as relates to China, Japan, and the East generally, where they have just begun really to appreciate and to use our tobacco."

Says the Manila American :

"The possibilities of the tebacco business in the Philippine allalands is very great. Probably not more than one-fourth of land that is adapted to the profitable raising of tobacco is under cultivation. And the tobacco land that is now cultivated, because of the wasteful and primitive methods of cultivation employed, does not produce nearly so much as it might.

"The demand for Manila cigars and Philippine tobaceo in the United States is steadily increasing. And free trade between these islands and the United States would eventually put milliens of dollars into the pockets of present and prospective tobacco planters. Nowhere in the world can tobacco be grown under more favorable conditions than in parts of the Philippines.

#### IS THE SCHLEY CONTROVERSY CLOSED?

THE President's rebuke to General Miles for discussing the report of the Schley court, his dismissal of Maclay, and his reported intentien to veto any action by Congress that would tend to keep alive the Schley controversy are taken to indicate that he wants the dispute dropped. In this he is supported by the pro-Sampson papers, by the papers that have taken a neural position, and by a large part of the pro-Schley press. This result seems to be due to the divided opinion of the court, which gives each side some ground for claiming a victory. A considerable number of the Schley papers, however, continue to ask for an investigation by Congress, while others, willing to let the case of Admiral Schley rest where it is, are calling for an investigation of the Navy Department.

"Schley has substantially won his case before the tribunal of last resort, the American people," declares the St. Paul Pioneer Press, "and he should be content with that." The Chicago Journal says, too, that Admiral Dewey's view "is the country's view," and "must be history's view, for it is the eternal and unalterable truth," and it thinks, therefore, that "there is no need for investigation on the part of Congress," since "the Schley controversy has been settled, and settled right." Similar opinions are expressed by the Indianapolis News, the Minnaapolis Journal, the Kansas City Nar, the Hartford Timet, the Baltimore Herald, the Salt Lake Herald, the Columbus Citizen, and the Sacrameton News of Joins.

The papers that have not been bitterly partition on either side are practically unanimous in urging that the affair be considered closed. They argue that since no decision in favor of either side will be accepted by the other, further investigation and agitation are useless. Some of the papers that take this stand are the Philadelphila Record and Press, the New York Tribma and Mail and Express, the Boston Herald, the Chicago Record-Herald, the Washington Nore, the Kansan City Journal, the Nashville American and Banner, the Louisville Pest, and the Seattle Pest-Intelligence.

Many of the Schley papers, however, object strongly against letting the matter rest without a further effort to vindicate the admirtal. "If the officials do succeed in closing the controversy now," declares the Chrcago News," it must be admitted that the conclusion of the case is not one that is calculated to secure public confidence in the management of the naval and military affairs of the nation." The vertice of the court is "a gross perversion of justice and must be repudiated," declares the Memphis Commercial-Appeal, and it seems to the Philadelphia Times that there is "only one way" to put an end to this naval scandal, "and that is by doing issuite." Several papers call part of its Sentiacl, the Richmond Diplatch, the New Orleans Productions Sentiacl, the Richmond Diplatch, the New Orleans Pacific Sentiacly Union. The last named paper says:

"The good name of the soldier is his dearest earthly possession, and the people should not forget that Admiral Schley is new technically under the ban as guilty of remissness in the discharge of his duty and neglect of orders. History must take note of the verdict of the court-martial, and none who write the books for schools will dare go, behind the returns—thus it will come about that American youth will be taught that Schley is unworthy of reverence or regard—if the matter be dropped where it has been left. Such a punishment would be enough to break

HISTORIAN MACLAY'S VINDICATION.

— The Philadelphia North American

the pride of any man, and the general support and approval of the present generation, who know the facts, will be small consolation, when history has been written by another generation.

"It is in the light of this reflection that we must take Mr. Rayner's advice that the admiral appeal his case and beg that Congress take it up as a last resort. We hope Congress will do so without delay, and await no request from the admiral; the desire to do simple justice in a matter so important should be incentive enough."

The Navy Department "ring," which many of the Schley papers think is at the bottom of the whole "persecution" of the admiral, comes in for its share of attention, "What the people want to know," says the Indianapolis News, "is not simply whether Admiral Schley has been mistreated, but whether their Navy Department is in the control of a clique, and organized to punish those who refuse to do homage to the dominaut influences. What is needed is an investigation of the Navy Department from top to bottom. In this way we can, if not right present wrongs, at least prevent other wrongs in the future." Other Schley papers, that are willing to drop the case of the admiral, but want to take up that of the Secretary, are the Chicago Chronicle, the Atlanta Constitution, the Pittsburg Dispatch and Leader, and the Detroit Free Press.

The New York Sun, the Boston Transcript and Journal, the Providence /qurna/, and other friends of Admiral Samuson do not express any wish for further hearings or investigations of . the matter.

#### GOVERNOR SHAW FOR SECRETARY OF THE TREASURY.

ITTLE criticism of a hostile sort greets the choice of Governor Leslie M. Shaw, of Iowa, to succeed Mr. Gage as Secretary of the Treasury. The Hartford Times (Ind. Dem.) regards Mr. Shaw's acceptance as the end of his Presidential

WHO WILL DROP NEXT?

"In addition to being a lawyer and m The Brookley Fants politician, Govern-

or Shaw is a country banker, being president of institutious at Denison and Manilla, Ia., towns of 2,700 and 700 population, respectively. Ordinarily, even long experience with the monetary problems of such communities as these would hardly be considered adequate training for such a position as the Secretaryship of the Treasury. But since Payne, the corporation politician, was chosen for the Postmaster-Generalship, the public is somewhat prepared for surprises from the President, and less inclined than heretofore to look for careful selections on account of special fitness. In Payne's case it was obviously the politician and the friend of large corporate interests that the President wanted. In Shaw's case it may be the politician and the governor of a granger State, who seems to be particularly popular with the agricultural element, while enjoying a wide degree of general public confidence."

Governor Shaw distinguished himself in 1806 by his frank advocacy of the gold standard when the politicians of the Middle West were treating

that topic in a very gingerly manner. The next year he was elected Governor, and was reelected two years later with double his original plurality. In 1508 he was chairman of the Indianapolis Monetary Convention, Governor Shaw is one of the most distinguished Methodist laymen in the Mississippi valley, and has represented the Des Moines conference four times in the quadrennial general conference

of that denomina-

GOV. LESLIE M. SHAW, OF JOWA To be Secretary of the Treasury.

tion. The Chicago Tribune (Rep.) thinks that it is not a matter for regret that a Secretary has been chosen who "is and always has been far removed from the influences of Wall Street," and who "is as free from trust alliances and entanglements as he is from association with great financial institutions." Several papers note the increasing influence that Iowa is acquiring in national affairs. She will now have two places in the Cabinet, the Secretaryships of Agriculture and the Treasury, and the Speakership of the House of Representatives. Senator Allison, of Iowa, is also regarded as one of the leaders of the Schate

A New York view of this Western appointment may be seen in the following comment by The Evening Post, a paper that is in sympathetic touch with the financial circles of the metropolis:

"Governor Shaw has grown in his office, and has steadily impressed himself upon the nation. He was a great figure at the Indianapolis convention for the promotion of currency reform, four years ago, and his speech on that occasion was one of the ablest expositions of sound doctrine that the long controversy over the gold standard developed. He is the sort of man who masters fundamental principles, and then knows how to set them forth in a way to impress and convince people who are not studeuts of financial problems. A Secretary of this class can be trusted, not only to go right himself, but also to know how to keep in touch with the country as he advances.

"The nation is now, for the first time, to have a Secretary of the Treasury who lives in a country town in the Western part of a great agricultural State which lies beyond the Mississippi River. We are glad that the new head of the Department comes from such an environment in the heart of the country. It is not true, as New Yorkers are apt to think, that only a great financier from New York or Chicago or some other large city is qualified for the place. We have great respect for the country banker who has carefully studied broad questions and worked out sound conclusions, and who often understands, far better than the citybred man, the feelings of the people and the best way of commanding their approval. The nation is to be congratulated that a President may look to a small town like Daiton in Massachimesetts, with only 3,041 milabilitants, or Demison in lowa, with but 3,646, for a man worthy to succeed the Chicago banker who is about to retire from public service at Washington. It is also cause for rejoicing that the President seeks to honor such excellent representatives of American manhood as the two unpretending Governors whom he has invited to enter his Cabinet during the past week,"

## SOCIALIST OPINION OF THE NEW ARBITRATION COMMISSION.

A S the success of the new capital-labor arbitration commisson (discussed in these columns last week) will depend
largely upon what the capitalists and laborers think of it, it
would be interesting if a frank expression of opinion could be
had from large numbers on both sides. The labor union journals (many of which appear monthly) may afford an idea of
unionist estimate of the commission; in the mean time the Socialist weeklies are very outspoken on the topic. The Socialist
papers profess to speak for the workingman, altho their party
polls only about 19,000 votes, a very small fraction of the workingmen's vote (Herbert N. Casson, in his new book on American labor, estimates that there are 5,000000 wage-workers in the
large factory cities alone.) According to the Socialist view, any
truce or opportunities of the socialist view of the socialist view of the socialist view of the socialist view
of the socialist view of the s

The Chicago Workers' Call terms the whole affair a "farce." and the National Civic Federation, which started the movement, a "conglomeration of exploiters, reformers, and dupes." The labor leaders who took part in the conference it calls "fakirs," and declares that they are "all well-tried tools of capitalism, all fawning and eringing before the great men who graciously express their willingness to consider both sides of the question impartially." The Seattle Socialist thinks that the labor leaders show "folly " and "idiocy," because "they can not or will not see that the conflict between labor and capital MUST continue as long as employer and employee remain," for "to maintain the latter means to maintain the wage system, and the perpetuation of the wage system means the perpetuation of injustice, of exploitation, and of the robbery of the workers," The prominent part taken by Senator Hanna excites the decision of the two papers just quoted, and The Missouri Socialist (St. Louis) does not doubt that "Hanna's anxiety in the present case, his desire to bring about a 'friendly relation between labor and capital,' is the result of his desiro to continue the power of the capitalist class, which he knows can not be done unless something is done in the 'friendly relation' direction; that is, unless they hoodwink the working class into the continued belief that their interests are identical with the interests of capital," The New York Worker says:

"This industrial peace conference will not settle the labor

question, will not put an end to the war between labor and cappical, any more than the famous international peace conference held at The Hague port an end to the war between nations. Since The Hague conference, the United States has gone night on with its war in the Philippines; within a few months England inaugurated a war of aggression in South Africa; then came the Chinese war, with many minor conflicts. In fact, ever since the delegates of the various nations assembled in that conference promised to work for international peace, the world has been convolsed with war.

"The reason is plain. The Hague conference did not even try to REMOVE THE CAUSE OF WAR—the rivalry of capitalists in the world market. Leaving that cause in full operation, it was impossible that any peace pledges the nations might make should bind them when occasion for war arose.

"In exactly the same way, this industrial peace conference has not tried to remove the cause of strikes, lockouts, boycotts, black-lists, and injunctions. That cause is the exploitation of the working class by the capitalist class, setting the interests of the two classes in direct opposition. That cause remaining in full operation, the pledges made by Hanna and Schwab on the one hand, or by Gompers and Mitchell on the other, however honeastly made, NEITHER WILL NOR CAN BIND THEIR RESPECTIVE PARTIES TO INDUSTRIAL PEACE WHEN THE OCCASION FOR INDUSTRIAL PEACE WHEN THE OCCASION FOR INDUSTRIAL WAR ARRISES."

The Cleveland Citizen gives its idea of what would happen if a great strike were referred to the new commission. It says:

"Not the least important phase of this movement is the prospective lining up of the gentlemen named above when a crucial test is made. We will say, for example, that next spring the iron and steel workers will attempt to recover lost ground or that the miners will demand some concession. The trouble is finally referred to the committee of thirty-sis for adjudication. The whole country, we will be assured by the newspapers, will expect a decision that will be accepted as final by both sides.

"Despite their sweet-sounding planses, the capitalist brethren will stand up for the employers and the labor brethren will stand by the workers. But does any same man believe Grover Cleveland, Arebbishop Ireland, MacVeagh, Eckels, Milbura, and the rest will take the side of the employees? The very thought of such a situation is sufficient to awaken the risibilities of a brass monkey.

"Cleveland and his colleagues will protect the dear publicaaltho the public is constituted almost wholly of the working cleas—by taking sides with Hanna and Schwab on all important questions, and they will show how unjust Re D. Labor is in making demands of Bro. Capitalist, how prices would be raised 'arbitarily' by forcing wages apparad, how industry would be injured, how capital would be driven away, and similar guash that have a majority and use it to cast odium upon the unions, arouse the prejudices of the ignorant, and sow the seeds of dissension. They have done it before.

"We can not see that any good can come in union officials hobnobbing with those who have mercilessly attacked labor upon every occasion, and such speeches as those made by Sargent and Phillips will cause many workingmen to believe and charge that

LABOR: "Ain't this sort of sudden, Mark?" - The Denter Actus.

THE PASSING OF THE MIDDLEMAN.

- The Philadelphia North American.

they sold out. Unionism will be enervated and robbed of the spirit of class-consciousness and aggression and damaged in other ways.

"We believe that we express the sentiments of a strong, militant, growing minority of the trade-union movement when we declare that there is no compromise, no identity of interests, between those who live on wages and those who thrive on problem will only be solved when the Rockfellers and Schwabs, the Hannas and Clevelands, get of labor's back when when the profit-mongering system of capitalism is abolished and Socialism is instituted."

#### COMPARATIVE COMMERCE OF THIRTY LEADING COUNTRIES.

HE fact that the United States leads the world in the excess of its exports over its imports is noted in a recent bulletin of the United States Bureau of Statistics. Many economists look upon a nation's import trade as the measure of its dependence upon other countries, and look upon its expert trade as a measure of the dependence of other countries upon it. If that be true, it is remarked, the world is more dependent upon the United States than upon any other country, for our export trade is the largest, while the United States stands fourth in imports, the measure of its dependence upon others; and the excess of our exports over our imports amounts to \$40,000,000 a month, a figure that is not even approached by any other nation on earth. The United Kingdom, Germany, and France, which are considered our closest commercial rivals, show decided balances the other way, that of the United Kingdom amounting to more than \$00,000,000 a month. In fact, the Treasury bulletin shows that in two-thirds of the countries listed the imports exceed the exports. The bulletin says:

"The countries which show an excess of imports over exports are Belgium, Canada, Cape of Good Hope, China, Cuba, Denmark, Egypt, France, Germany, Greece, Italy, Japan, Holland, Norway, the Philippine Islands, Portugal, Spain, Switzerland, Turkey, and the United Kingdom.

"The table which follows shows the average monthly imports and exports of the ten countries in which the exports exceed the imports in that part of the current fiscal year for which figures are now available:

#### AVERAGE PER MONTH PURING 1901.

Country.	Imports	Exports.
United States	\$71,8 (0,018	\$112,864,852
British India	115,500,111	31,565,179

The New York Evening Post says:

"The countries which have a balance in their favor, or, as the protectionist might put it, ' produce more than they consume,' are chiefly the South American republics and the United States. On the continent, only Austria and European Russia occupy a similar position, all the other countries importing more than they export. Among the importing countries must also be reckoned England. The showing thus made is, of course, exactly what might have been expected in view of what has been going on during the past few months, and no doubt will be taken by the Europeans who have been talking about the 'American peril' as a striking corroboration of their fears. It is true that the growth of American manufacturing and of our exports of capital has been coincident with more sedulous exclusion of European goods by higher duties on our side of the ocean, but the main reason for the unfavorable conditions on the Continent must be found in the general depression in manufacturing which has prevailed there, and in the growth of industrial combinations in tariff-protected countries. How these trusts, by their attempt to raise prices, have really opened the market for increased imports of American goods may be seen in the cases of coal and manuface, tures of iron and steel. The remedy for these industrial evils hes in freer conditions of trade, and not in the higher duties recommended as a palliative,

### JOAQUIN MILLER'S PLEA FOR CHINESE IMMIGRATION.

T may surprise those who favor Chinese exclusion for the sake of the Pacific-coast interests to hear that the Pacific-coast people want the Chinese, and are hoping that the exclusion bars will be let down. Joaquin Miller, who has lived on the Pacific coast for fifty years, and has visited almost every county in the coast States, declares in an article in The North American Review that all the people of that region, except the labor unions of the cities, are a unit in favor of Chinese immigration; and the city laborers, he declares, are in a very small minority. The "silent men at the front, of the forest and the field," he says, "outnumber the noisy city 'laborer,' so called, ten to one, altho you would think the figures exactly reversed, to hear the city man and read his noisy resolutions." "I am a laboring man," he continues; "I have never aspired or attained to much beyond hard work. I have built miles of stone wall here, planted thousands and thousands of trees, worked alongside of all sorts of hands' right here, as all know, for the past fifteen years, all the time when not at work elsewhere, and so it is that I know what a real laboring-man is." "The so-called ' laboring-man, ' " he avers, "who is not one in ten of the real laboring-men, simply is a beggar and a bully. He does not want to work. He only wants to get something for nothing. , , , And I say that, so long as the city of San Francisco, and the State of California, and the Federal Government pander to and try to please and appease this ignorant mob of our laws, who crowd the saloons and in their drunken desperation tear to pieces honest men who want to work but refuse to associate with them, just so long will San Francisco remain a reproach, as it has been all the season past,"

The Chinaman, in contrast, appears to Mr. Miller to be a refined geutleman. The Chinese me "the best-educated people in the world," we are told, and are honest to a degree unknown in this country. As to their cleanliness, Mr. Miller says:

"The Chinese in the placer mines, where I worked alongside of them for years, always took time, at the end of a day's work, to entirely change their clothes and take a bath. I never knew a Chinese miner who did not. I never knew any other foreign miner who did. In fact, I never knew one of the other foreigners to take a bath of any kind, except by accident. The Chinese are the cleanest people in person in the world, except, perhaps, the English gentlemen who take their daily 'dip.'

"In conclusion, let me say I never saw a drunken Chinaman, I never saw a Chinese beggar. I never knew or heard of a lazy one. I sat as county judge of Grant County, Oregon, for four years, where the miners had sold out to the Chinese to such an extent that the larger half of the mining properties was Chinese. Yet in all that time there was not one criminal case involving a Chinaman, and but one civil one, and in the latter case a white man was finally indicted by his fellow citizens for perjury."

The "wild cry" against the Chinese, we are assured, is "simly sensation," due to the newspapers, "and there is nothing in this world so conscienceless and cowardly as the average American newspaper; except, perhaps, the average American politician." Mr. Miller roses on to say:

"This outery has widened and spread, until to-day there are few property-owners in San Francisco who care to have their real sentiments on the subject published. But I repeat that all the tax-paying and substantial citizens of our cities and the real laborers of our Pacific empire, from Alaska to San Diego, want and need these people with us, for, as Senator Morton said, they do 'the lowest work.' The man with a home, whether he has a little shop or a little farm, does not want his wife and growing children to cook, wash, and do chamber work, when he can get a silent and submissive little Mongolian to do it for a song. I tell you more: the real laborer on this coast is a Christian, and when he reflects that 'the little, brown man' is starving, starving for work, and that his people at home are literally starving for the dollar or two a week, which is all he asks when he first comes to us, why, this Christian man wants to open his home to him, and his heart, too, and give him work. We have, perhaps, the finest, best people in the world on this l'acific coast, the select of the republic, and we can keep this standard up, and even advance it, and do Christian good at the same time, by not only allowing but inviting the little brown men to come. For our ambitious and splendid white boy or white girl can not get on nearly so well at school if kept at home to do washing, do chamber work, and help mother to do what Senator Morton called 'the lowest work ' about the house. The foreign girl simply will not go away from the city; and even in the city, if we except the Swede, German, and the like, she must have light work and heavy wages, My work as a teacher, talker at teachers' institutes, colleges, and so on, has, in the last four years, taken me into nearly every county in Washington, Oregon, California, Arizona, New Mexico, Texas, and Louisiana, and I have nowhere heard one voice in favor of the Chinese exclusion act, but the contrary, at all times and places. The Chinese are particularly wanted in the great Southwest.

"I can count letters from women by hundreds, begging that this brutal act be not perpetuated. Our women here in this warm land are not so strong. They must have 'help,' and they can not depend on foreign white 'help,' and their daughters must go to school.

"Now a word about the 'hordes' that are to 'overrun us.' Senator Morton estimated that we had about 75,000 Chinese in

California. We may have that number now; we may have only half so many, but I think, at one time, we have had at least a quarter of a million. This was when the placer mines were open to all, and the Harvard, Yale, and Princeton graduate showled dirt in the same guide with 'John,' and found him a very quiet, cleanly little fellow, from the Oregon Siterra to the Sierra Matire. And when the graduate, the gentleman got his claim washed out, he sold it to 'John' for gold and went home; and John sold it to his newly arrived consin,' on tick, and went home also. Then the constin worked the claim to the bed-rock and went home,

"So things went on till the first Pacific railroad was built, and when the last old claim was worked out, as a rule, the Chinaman went home. The quarter million of Chinese, without any restriction at all, hall dwindled to about 75,000. Thus much for the 'hordes' that are to overrun us. How lilogical that the yellow element of the American press should be forever boasting of American press of the 'hordes' of the

#### THE BOOKS THAT ARE INDISPENSABLE.

E DMUND GOSNE, one of the foremost of living critics, has been giving some advice to readlers bewildered by the conflicting lists of "best books," with which we have been flooded during recent years. He is certainly well qualified to speak on this subject, for, as he himself confesses, he was the first to draw up a catalog of "best books,"—"an offense of sufficient enormity," remarks the Washington Post," "as it has probably been responsible for similar performances by hundreds of ambi-

EDMUND GOSSE.

tions littlerateurs and perspiring Chautauquans," He says (writing in Lippincott's Magazine, December):

"What the list of books which I enumerated as indispensable exactly was I have forgotten. But I am sure that it included Boswell's 'Life of Dr. Johnson' and Goldsmith's 'Vicar of Wakefield. Among Shakespeare's plays, certainly 'Hamlet.'. I must have named The Pilgrim's

Progress, 'Don Quixote,' and

Goethe's 'Faust' in a list that included 'Tom Jones,' I am certain, because some moralist expostulated with me afterward, As I am easy-going, I will put 'The Arabian Nights' instead of 'Tom Jones.' What of Dickens? Surely 'Pickwick.' I am inclined to say Lockhart's 'Life of Sir Walter Scott,' and to finish with 'Robinson Crusoe.' Here, then, are ten indispensable books, by familiarity with which a man may certainly hope to escape from the charge of being wholly unlettered. If he is igporant of these ten, he can not escape from it. Of course, all of these throw out side-branches and offer parallel advantages. If 'Hamlet,' we may say, why not 'Othello'? and if 'Faust,' why not 'Tartuffe'? Quite so; and the ten thus lead to tweuty, and the twenty to as many as you will. It will be observed that my little rudimentary list contains no non-dramatic poetry, no theology, no history, no philosophy, -nothing that in any degree requires or presupposes previous technical study. It merely tries to come down to the very bone of literary reading that is in an equal degree entertaining and instructive.

The scope and purport of lists of "best books" have considerably changed, observes Mr. Gosse, since he drew up this first and most tentative of them, and in many of the most whely circulated lists "a display of the crudition of the list-makers seems to have been preferred to the requirements of the people for whose use the list is made." He continues:

"What names are wanted in a handy list of obvious books me neither those of obscure Indian erudition nor of ephemeral romance nor of pure every-day utility. Pliny says that it is well to read much, but not many things; our modern vice is to read many things, and yet not much. After we have read much, that is to say, after we have grounded ourselves on the sounders culture,—we are free, if we like, to read many things, such as folk-bre and entomology and even the 'Mahathhárata. I is not necessary or wholesome that the average man should read all books. If he tries to do so, he is instantly invaded by mental bewilderment. But there are certain books which, if he has not read, he is at a constant disadvantage in moving among educated persons. He fails to perceive the line of thought, he does not understand the humor, of his friends. He masses the cut reme pleasure of following the continuity of the intellect of manicular ways and the result of the continuity of the intellect of manicular ways and the present of the play they are they are the play they are the play they are the play they are they are the play they are they are the play they are they are they are they are the play they are the play they are the play are they are the pla

"If so, we ought, surely, to beware of weighing down these lists with pedantry on the one hand or with triviality on the other. Such a man as I have just described does not want to be recommended to read 'Ben Hur'; he probably knows it from cover to cover. He does not want to be urged to plunge into the Bhagayadgitá, ' for he certainly would be drowned in it at once. But he does want to be led gently to Walter Scott and to Dickens, to Milton and to Shakespeare. He who should carefully read these four writers alone, even if he should look at nothing else, might become a man of high and distinguished cultivation. He who has not read these four, no matter what else he may have read, is imperfectly equipped as a student in the rudiments of English. It is not a question of whether these are or are not the best English authors, but these are unquestionably the writers in whom the genius of the nation has expressed itself with the most lasting popularity, those who have stored the national memory fullest with figures and sayings, and those without whose companionship the mental adventures of a modern Anglo-Saxon are left most featureless."

"I should say that each individual is bound to have a certain familiarity with Gray's' Elegy," adds Mr. Gosse, "and a noding acquaintance with the "Essays of Bacon" I insist upon. He will find Izaak Walton's 'Lives' delightful reading, but it is not essential; on the other hand, he must have read Boswell's 'Dr. Johnson,' or he knows nothing." The writer concludes:

"At the present time, when the production of books is so excessively enlarged, there is a danger that the modest reader may despair at the threshold, and never have the courage to enter the library at all. He knows not where to start among the endless myriads of volumes, and he may easily perish of perpetual thirst in the very fountain of literary waters. But, fortunately, the chaos is not so pathless as it seems, and for some reason or other which defies analysis there are a few works among these millions which have contrived, preeminently, to attract and to hold the attention of Englishmen, generation aftergeneration. There are not very many of these; a considerable proportion of them are exceedingly short, and there is no reason why the busiest of men, if his notice is definitely drawn to them, should not be able to master them all, with no special effort or expenditure of time. If he does so, he is equipped for private reading; he has the threads in his own hand, and has but to follow them in whatever direction he wishes them to lead him. But he is almost sure to make mistakes and lose his time if he has not a guide to the greatest names at the outset, and to supply this guide is, in my opinion, the proper aim and the only excuse for the existence of tabulated lists of 'The Best Books.'

Emperor William as an Art Patron.—Not content with his multitudinous activities in other fields, the Kaiser has blossomed out as an art patron and critic. Some time ago he conceived the idea of creating a "Sieges Alber,"—an avenue bordered by henvic statuary representing the great victors of the German race—and he entrasted its execution to the accomplished sculptor. Prof. Reinhold Begas. The plan having been successfully carried to completion, Emperor William gave a dinner in the royal palace to the collaborating artists, and took advantage of the occasion to ventilate his views on art. Comparing himself to the art patrons of the Renaissance, he expressed the belief that he, like them, had encouraged the formation of a distinctive school of art. He said that Germany could proudly point to many artistic productions almost equaling in excellence those of the classical era, and be hoped that German art would remain

true to the antique traditions. "Art," he said, "should educate the people and offer ideals to the lower classes after a hard day's toil. The cultivation of the ideal is the highest mission of civilization, and if we are to be and remain a model for other nations in this respect, the whole people must work in unison, . . . In all lands there is the deepest respect for German sculpture. May this be maintained."

Commenting on the Kaiser's utterance, the New York Evening Post declares that the standing reproach against modern German sculpture is its "dull, pseudo-

classical quality," and that the Emperor seems to wish to emphasize this commonplaceness. It continues :

"Of course, as things go to-day, the views of potentates on matters of general esthetics are seldom important enough to be interesting, or grotesque enough to be amuing, and right here lies the distinction of the Kaiser. Where King Edward, on such an occasion, would have confined himself to safe platitudes, and our own President would probably have spoken under advice from some competent person, the Kaiser trusts naively to the inspiration of the postpraudial moment. Is there another monarch of our times who has never learned the fear of seeming ridiculous?"

#### OPENING OF THE GRAND OP-ERA SEASON IN NEW YORK.

HE ninth season of grand opera under the direction of Maurice Grau began on December 23 in the Metropolitan Opera House, New York. Contrary to the usual custom, a Wagner opera - "Tristan und Isolde" - was presented on the opening night. Mr. Walter Damrosch conducted, and the leading rôles were taken by Ternina and Van Dyck. In the same week were presented Gounod's "Romeo et Iuliette" and "Faust," and Donizetti's "Don Pasquale," the east including Albert Reiss, Maurice Declery, Lnigi Tavecchia, and several other new singers. The honors of the opening performance, declares the New York Tribune, "went to Fraülein Ternina, who was marvelously eloquent in voice, pose, gesture, and facial expression." "Tho the numerous audience might have been more demonstrative in its expression of approval, considering the excellence of the representation," continues the same paper, "it paid the beautiful tribute of rapt and earnest attention." The New York Evening Post comments with some surprise on the choice of "Tristan und Isolde" as the opening opera, remarking that "the times have changed indeed." "Where are the proph-

ets who predicted in 1886 that the production of 'Tristan' in New York was the beginning of the end of the Wagner craze?" it asks: "what has become of those to whom it was 'unsinvable." 'a monstrosity,' 'higher cat-music,' and so on?" The New York Times says, in similar vein:

"There is a general public to be reckoned with in the Opera House, and half a dozen years ago its tastes would have made the opening of a season with ' Tristan und Isolde ' a hazardous

experiment. That Mr. Grau was not afraid of the attitude of this general public last night is the really significant fact in this matter. To be sure, there is not the least reason in the world why Gounod's ' Romeo et Juliette ' should not be presented with the same spirit of artistic devotion on the part of both performers and public as that which we find in the performances of Wagner's later dramas at the Metropolitan, but we have not yet reached that state of blessedness, nor are we likely to do so while the singer and not the work is the center of interest. The public

PROMINENT FIGURES IN THIS SEASON'S GRAND OPERA.

while it is satisfied to accept 'Tristan und Isolde' in the light of a dramatic function and to assume toward it at least an outward aspect of seriousness. With this in view, the filling of the house last night, the opening night of the season, when the externals of an opera season, rather than its substance, might be expected to make the most natural appeal, had a meaning not to be disregarded. With all our frivolity in art affairs, we have made perceptible advances. If at some happy period in the impenetrable future we shall come to take all our opera as earnestly as we now

take 'Tristan und'Isolde,' the problem of a permanent lyric institution in New York will be close to solution."

The New York Commercial Advertiser says:

"The superb acting and effective declamation of Van Dyck. the satisfaction that is ever found in Bispham's picturesque Kurvenal and Ternina's beautiful delivery of the 'Liebestod' were sufficient to raise it far above the commonplace. No man, since Niemann, has been able to invest the death of Tristan with such poignant tragedy as Van Dyck does. An accomplished actor. he not only knows thoroughly the routine, but he has moments of genuine inspiration. A master of pose, gesture, and facial expression, he drives home his points with a surety and an effectiveness that spell absolute conviction. His personality seems entirely to be submerged in the part, and he gives himself to it generously and without restraint. And, unlike in the second act, the music hampers him but very little. It is practically straight declamation. His phrasing throughout is that of an artist, and his lapses from pitch, very few as compared with those in lyric passages, are of small account. His third net of ' Tristan and Isolde' must be placed by the side of his Loge in 'Das Rheingold' and his Sigmund in the second act of 'Die Walkilre. Of Ternina's Isolde from beginning to end, there is nothing to add to what has been said in this column time and again. It is one of the most completely beautiful impersonations of the operatic stage, and the better one becomes acquainted with it, the more it appeals to him. A royal princess she is with all the pride and arrogance of her rank; yet she is a fond, loving, guilty woman. The psychological blending of these two elements is so fine that it all but defeats analysis.

#### THE HENLEY-STEVENSON CONTROVERSY.

7 OT for many years has a storm of controversy been aroused in literary circles equaling in bitterness and intensity that precipitated by Mr. W. E. Henley's derogatory article on Robert Louis Stevenson in the December Pall Mall Magazine (see THE LITERARY DIGEST, December 14). The overwhelming consensus of opinion, as voiced in the literary journals both of England and of this country, is one of condemuntion of Mr. Henley,-a condemnation that at times becomes scathing denunciation. For example, the London Saturday Review (November 30), under the title "Literary Leprosy," declares that "this attack on Stevenson would have been unpleasant and unworthy enough if published in his lifetime when Stevenson could answer. but published long after his death, it becomes, in plain words, the only words that fit the offense, cowardly and malignant." The article, which is written throughout in this tone, concludes with the following paragraph:

"This last instance of the fragility of literary friendship sets one thinking what it is in the pursuit of letters as a profession that so often, if not usually, in one way or another corrupts the manhood of literary men. And we speak of real men of letters in this instance; we do not refer to the miserable crowd of spurious imitators, who dub themselves 'literary men.' It is a painfel phenomenon observed many centuries ago. Men of letters know it themselves. The title of this article is a phrase taught us by one of the best and best-known English men of letters now living: one who has lived amongst the cream of them all his life. Leigh Hunt was not the first nor the last literary leper. It is a pity they can not be isolated and outlawed as are lepers in the flesh. We should be glad if we could say that this paltry exhibition of envy, jealousy, and spite was without parullel. Unfortunately the past makes any such statement impossible, and we are not sanguine of the future justifying it any the more. Still, it is too bad a case to ignore. If the world lets this pass, there is an end of all confidence and of any real friendship amongst authors and meu of letters."

The London Academy (November 23), in its characterization of Mr. Henley as "The Candid Friend," is less severe in some of its judgments, but comes to the same general conclusion. It says:

"If Mr. Henley's article is a specimen of the 'new biography' from the pen of the friend who knows, then give us the official

Life. We have already said what we thought of Mr. Balfour's colorless but conscientions Life; but that, in conjunction with the Letters and Mr. Colvin's biographical chapters, gives, we believe, the true picture of the man. Mr. Henley's pages, with their trivial accusations of frailty, add nothing, prove nothing.

"Stevenson is beyond the reach of praise or blanne. He was either whole saint nor whole sinner, but, like most of us, something of both. He was a man of infinite variety. In early life his many sided nature, his letterly fancy, his eagerses for experience rau him hither and thither: later it settled into a broad, deep stream. He could always be kind, and just, and sympathetic in his estimate of others. That his paper on Bruns should. He knew how little we understand one another, how 'greatly dark' a man we have known even for thirteen pears may be."

In the opinion of William L. Alden, London correspondent of the New York Times Saturday Review, Mr. Henley's article was "a mistake from beginning to end." "Nearly every one will feel sorry that it was ever written," he says, "but the sorrow will be more for Mr. Henley than for Stevenson," Julian Hawthorne, writing in the Philadelphia North American Book Subplement (December 14), executates Mr. Henley in burning words. "The rascality of his achievement," he says, "is equaled by its cowardice and impudence only. . . Literary felon he is and also assassin of friendship, defiler of the dead, and betrayer of every relation of fellowship and moral obligation," The New York Times Saturday Review (November 30), reviewing the whole subject in much more moderate vein, concedes that there is a certain amount of truth in Mr. Healey's point of view. Out of an "official biography," it says, a true portrait can not possibly come, because in such a biography "there must be no shadows either in the figure or in the background." It continues:

"Mr. Henley may, and probably does, expect un outbreak of wrath for his candor. And undeed he does not help matters much, for the sooty streaks wherewith he defaces the image presented by Mr. Balfour can not be taken for a likeness either, as we have said. And his work is thus not useful, except to relieve his own mind. When Carlyle was disguated with Archdeacon Hare's life of Sterling, his disgust took the rational form of maing one of his own, which remains the most artistic of his books, and the most artistic biography in the English language. So formed [Since with the property of the contents of the work by Mr. Henley has been made.—Euron Literaky Diozat], his may as well perhaps restrain his jeen."

Mr. Henley is not without vigorous defenders. A writer in London Literature (November 30) declares that "Mr. Henley did not dream that he would be suspected of advertising his own importance and of charging Stevenson with ingratitude, when he produced credentials to show that his own masculine and undraped representation of Stevenson was truer to life than the conventional, emasculate substitute for a portrait offered by in iudicious friends." A correspondent of the Loudon Academy (December 14) describes Mr. Henley's action as that of a man who, "seeing a smooth, characterless, unlike portrait of a beloved face, takes a brush full of dripping paint, lurid or black it may be, and blots it out," His action may have been unwise, but "to those of us who know and love him the one thing inconceivable is that any motive base or unworthy could have, however unconsciously, influenced the article." The St. Louis Mirror (December 19) says:

"Out upon all this maudilin sympathy with Stevenson after the 'tattack' by Henley. Henley's protest was not so much against Stevenson's self as against the false, simpering, pathetic picture others had drawn of his 'Lewis'. Henley protested against an emasculated Stevenson, and Henley did right, if ever man did, the has told the truth as he saw it. He saw Stevenson as a man, not as a god. There is no doubt in the world that Stevenson did the has told the production of the saw it. It is not the saw it is the saw it is not a saw in the saw it is a saw in the saw it is faults. When I lettley points them out, the world cries' 'sacritege.' It was no sacribege. It was a service to the memory of

sason, yes, even the it be true that Henley and Stevenson quarreled. Henley objects to an emasculated and evisce-1 Stevenson. So does everybody else-except the ladylike Ons who want to think of R. L. S. as a sort of sugar-coated who contrived a new trick of blending the minor poet in rollicking Stoic. So far as the two men are concerned, Hen-is the greater. That he is not so well known argues nothing. s, if anything, in his favor that he has not caught the fancy t has made Stevenson an idol and his life almost an idyl. venson has his value, and it is a high value. But Henley is rippy man, the man who does the heroic without posing, and withal as gentle, without wallowing in self-contemplative genness, as the author of 'Will of the Mill.' Henley is just ough of a man to be aroused to ire by the namby-namby Stemson that is becoming fixed in popular opinion, through the discriminate superficializing of some unpenetrative critics both men and books. Henley has done no harm to Stevenson, or himself. He has done a service to truth."

An attempt was made by London newspaper men to interview ftr. Hentley, but all they could get out of him was a quotation from Bishop Berkeley. "They say, What say they? Let themesay." In an "Impression of the Week, "contributed by Mr. Healvy to the London Sphere, he made, however, the following addenda to his article:

"Last week Mr. Greenwood asked me a question: Did the Late R. L. S. (I can not with the shrieks of the Bandar Log lish shrilling to the Empyrean, I dare not be more particular) look as selfash in life as he looks in his portraits? There can be used not answer: He did not. In the photographs we have of him there is nothing perfore of the brilliancy, the clor, the mobility, the impudence ('tis the sole word) which his features wore. As for the 'changeling,' let Mr. Greenwood turn to the eight-and-twenty volumes of the 'Edinburgh Edition.' If the changeling were ever anywhere at any time, he will certainly be there."

Mr. Sidney Colvin, the editor of Stevenson's "Letters," declares that he will reply to Mr. Henley in his "own time and manner." The light he can throw upon the subject will be that of "both an earlier and a later friend of Stevenson than Mr. Henley was; and one whose intimacy with him was at no time broken by misunderstanding. Meanwhile," he says, "the public will do wisely not to let the image they had previously formed of him from his books and his letters be disturbed."

#### SHOULD THE HIGHER EDUCATION OF WOM-EN BE THE SAME AS THAT OF MEN?

HE statement is made, by a woman professor in a college for women, that all intelligent and unprejudiced persons now concede that the intellectual development of women is subject to the same laws as that of men. She distinguishes, however, between the preliminary general training which has intellectual and moral development for its main object, and the specialized work which presupposes such development. She thinks there should be a difference in the education of the sexes when that grade of study is reached which is represented by the freely elective work of colleges, the graduate work of universities, and the professional work of technical departments and schools. This writer, Celestia S. Parrish (Educational Review, November), says that at first sight it would seem that college men and women who choose teaching as a profession ought to have exactly the same training; but, she observes, the main educational fields open to women are the primary and secondary departments, and this will beyond doubt cause some difference between the training of the majority of men and the majority of women who intend to teach. In professions other than teaching, still greater differences are to be found:

"It is not entirely true that men and women who are physicians have the same diseases to deal with. It is true that very many more diseases are common to both men and women than are peculiar to either sex, and that physicians must all know these commen diseases; but it is also true that women physicians

will be very seldom called upon to treat any of the diseases neculiar to men, and that they will rarely, if ever, specialize in them. It must be granted that there is no more reason in the nature of things that women should not specialize in men's diseases than that men should not specialize in diseases peculiar to women; but one cause of the growing demand for women physicians is that women, and the men who are their natural protectors, are coming more and more to believe that the attendance of a man physician upon a woman is, in some cases, unnatural, to say the least. Hence, women physicians will more and more. perhaps, specialize in diseases peculiar to women. Because of their greater sympathy with and love for little children, children's diseases will probably be more and more given over to them. The position of family physician and counselor, in which sanitary supervision and the hygiene and physico-moral instruction of children form an important part, has sought women phy-There may, and probably will, be here an increasing demand. Naturally, any difference of function will and should tend to cause a corresponding difference of training."

This writer's further opinion is that in the education of men who are to become husbands and of xomen who will become wives there should be sufficient difference." to allow each to assume different phases of the complex work which the home and the family necessitine." Slie says there are certain functions or duties in household economy. "whose proper performance piesup-poses more special knowledge tinan is needed by physicians, lawyers, teachers, or members of any other profession." These duties are now almost universally left to the wife, at least in cases where the husband must support the family. Such daties are the sanitary supervision of the home, the selection and preparation of the food, and the main social direction of the family life. Miss Parish writes:

"If I were called upon to select two types of women most unfitted for this work (I am speaking now of women who claim some education and refinement). I would select first of all the women trained after the old 'parlor boarding-school' régime : but next I would select the college woman who has specialized very narrowly in certain lines which do not bear importantly upon a single one of the functions mentioned. The latter would unquestionably have an immense advantage over the former. She could much more easily gain the knowledge she lacks, When she sets to work to do that, however, she is furnishing the most incontestable proof of my main point. She is taking the professional training which I am contending she should have. The statement that the college laboratory should not be turned into a kitchen, or the university class-room into a nursery, is only one of the epigrammatic half-truths which from time Immemorial have served to obscure truth,'

Miss Parrish glances over the course of education of "a Bryn Mawr A.B.," and comments as follows:

"By the time she reaches her Ph.D. degree, and even before, she may have attained a fairly good balance of powers, but one would hardly consider her ready without further study to regulate her own life before and after marriage so as to secure the best results for her children. Without assidnous study she would hardly know enough of physiology or hygiene to regulate the physical life of a little child; hardly enough of psychological laws to train the delicate organism, the child-mind; certainly not enough of chemistry or the hygiene of foods to prevent hopeless indigestion on the part of her household; not enough of bacterlology to guard intelligently a household against germ diseases; and not enough of the workings of social forces to be a very intelligent worker in the social regeneration which ought to be a part of the work of every influential mistress of a home. She would hardly be ready without further study to guide either her son's or her daughter's thoughts through the several life crises.

"For the reasons given, as well as for some to which the limit of this article have allowed only a passing reference. I am convinced that the we need no arbitrary action on the part of institutions, it will be very much better for the majority of women who will marry and become mothers to shape their work with some reference to that, and that, so far as this will create a difference between their education and that of men, the difference between their education and that of men, the difference between their education and that of men, the difference between their education and that of men, the difference between their education and that of men, the difference between their education and that of men, the difference between their education and that of men, the difference between their education and that of men, the difference between their education and that of men, the difference between their education and that of men, the difference between their education and that of men, the difference between their education and that of men.

#### THE RECIPIENT OF THE NOBEL LITERARY PRIZE.

THE French poet Sully-Prudhomme, now a confirmed invalid living in retirement at the Valles aux Loups, has been awarded that one of the five Nobel prizes which was to be bestowed for toot for "the higher work of literature in the sense of the ideal." These prizes are awarded without regard to nationality, and the names considered each year are by the terms of the award to be presented by the neademics or official learned societies of the different countries. All the prizes are to be awarded for services to humanity, this particular one being open to any literary man, philosopher, or writer. The Paris corre-

RENÉ F. A. SULLY-PRUDHOMME.

spondent of The Evening Post (New York) tells of the different candle dates presented last year and the votes received by them as follows -

"Ibsen and Tolstoy, whose name. it secuis, was not regularly presented, come first, with three votes each. Frederic Mistral, who has written poetry the trnest and most eachanting in his Provençal language; Sienkiewicz, with craze behind him:

Ossin-Lourié and Hauptmann, both objects of temporary fads, followed after, with two votes each. And a single vote was found for Rostand and for D' Annunzio, among the young whose fancy roves freely, and for Freitag (so it is said), the he has passed beyond the age-long discussion of the lower real and higher ideal. Echegaray, the dramatist, was named by Spain, and is thought to have had serious chances."

Dr. Wersen, perpetual secretary of the Swedish Academy, which makes the award, in official explanation of the choice made, speaks of Sulty-Prudhomme in the following way :

"Sully-Prudhomme was born March 16, 1839, and showed himself an accomplished poet from his first publication, in 1865, of 'Stanzas and Poems'; this volume was followed by several others-verses, philosophy, or esthetics. While the imagination of other poets is essential turned outward, reflecting the life and world which surround us, Sully-Prudhomme has a nature of more inward turn, as sensitive as it is delicate. His poetry rarely occupies itself for its own sake with outer images and situations, but chiefly in that measure in which they may serve as a mirror for poetic contemplation. His soul's love, its doubts, and tronble, which nothing earthly can dispel-these are the ordinary subjects of his composition, which in finished form and sculprural beauty suffers no useless word. His poetry is not exuberant in color, and it is only by exception that it takes on the character of melodious music; but it is all the more plastic in the creation of forms and to express sentiments and ideas. Noble, deeply pensive, and inclined to sadness, his soul betrays itself in poetry which is tender without falling into sentimentality; and its sorrowful analysis inspires the reader with metanchoty sympathy. By the charm of exquisite diction and consummate art. Sully-Prudhomme is one of the first poets of our time; and there are poems of itis which are pearls of undying worth. It is not the didactic or abstract poems which have most attracted the nttention of the Swedish Academy, but lyric compositions of less extent, full of feeling, contemplative, charming by their nobility and dignity, and by the extremely rare union of refinement of reflection and wealth of heart.

"Yet another feature of the work of Sully-Prudhomme should be brought out in relief. It reveals a seeking and observing mind that finds not repose in things which pass, and which, since it seems impossible to know that which is beyond, finds in the moral domain, in the voice of coascience, and in the lofty and unquestionable behests of duty, a witness of the supernatural destiny of man. From this point of view Sully-Prudhomme better than most represents what the founder of the prize called Idealism in literature; and the Academy thus believes it is acting in the spirit of the will when, for the first time it has to award the prize, it gives its votes, among so many names illustrious in letters, to that of Sully-Prudhomme,

Commenting upon the absence of votes for any candidate from an English-speaking country, the Paris correspondent of The Evening Post, referring to the words quoted in the paragraph above, remarks:

It is only fair to acknowledge that such words could not be applied with any show of justification to any living English or American writer. Perhaps all our idealism, which flourished during the first half of the century now closed, has been drowned in the waves of material prosperity. Perhaps, too, here lies the reason why our literature in its present representatives is so little known among the peoples of the Continent and exerts so little influence. In France Chauning has been known since 1848, and Emerson has more recently been the object of a light fad; but Edgar Allan Poe alone among our authors seems to have risen to the rank of a universal classic, in part from the literary merits of his translator, Bandelaire. But it remains certain that the English language, at the new century's beginning, has no candidate for the Nobel prize in the literature of the ideal. . . .

"Sully-Prudhomme has, indeed, more than fulfilled the first ideal of the average French youth, of whom it has been said that, before he lies down like a sheep in some decorous profession, he must needs bleat like a kid in verse. He is a Parisian of Paris. the son of a merchant of honorable position, for whose commerce he had little taste. He kept on at the university in law, and then attempted the special mathematics. All these influences are shown in his life-work, but he has been through all the poet and philosopher."

#### NOTES.

THE Danish Government recently granted an annuity of 1,000 kronen (about \$1,900) to the eminent critic. Dr. George Brandes, in recognition of his services to literature. Dr. Brandes, is now fifty-nine years old, and he is, without doubt, the most conspicuous figure in the literary life of Den-

ANOTHER experiment in handicraftsmanship inspired by William Morris and his friends has been inaugurated at Eastwood, pear Syracuse, N. Y., where an association of cabinet-makers and metal- and leather-workers has been established, under the direction of Mr. Gustave Stickley. This guild styles itself "The United Crafts," and its purpose is to produce artistic household furnishings. It also issues a monthly journal, The Craftsman, three numbers of which have been issued.

THE opening of the dramatic and musical season in Vienna has been marked by several notable events, among them the production at the Burg Theater of a new play by Hermann Bakr, entitled "The Apostle." Vienna correspondent of The Commercial Advertiser (New York) writes that the most noteworthy feature in "The Aposite," the first play of the author, who is a well-known Vienna journals) and author, it is vivid reproduction of a seasion of porlimment, with photographic exactness in all the details connected therewith. The scenes that dispraced the Austrian parliament a few years ago are presented with startling realism. thal takes the part of the leading character of the play, a cabinet minister, whose fall is brought about by the thoughtless improvidence of his wife. "As a triumph of stage management," says the writer, "the play is retarkable, and all Vienna will probably be running for weeks to see this stage presentment of political life."

THE deaths of Edward Onslow Ford and Sir Joseph Noël Patous few days ago remove two interesting art personalities from contemporary British life. Mr. Ford was among the most famous of British sculptors. and his statues of Sir Rowland Hill, W. E. Gladstone, Sir Henry frying, and General Gordon areas notable as anything of their kind that has been altempted during recent years. Probably his most poetical conception was embodied in the "Shelley Memorial" at the University College, Oxford; and one of his last works was a bust portrait of his friend Edwin A-Abbey, which is now on exhibition in the Carnegie Justitute, Pittaburg. Sir Noël Paton was an entirely different type of artist, and his fame rests chiefly on his religious paintings which bear soch titles as "The Good Shepherd" and "The Man with the Muck-Rake." Many critics, however, think that his best work was done in his filestration of Coleridge's "Ancient Mariner," Kingsley's "Water Babies," and other books. It is said that Sir Noel was Queen Victoria's favorite artist. He was knighted in 1867, soon after his appointment as "Queen's Limner" for Scotland. The late Queen bought several of his most important pictures,

#### SCIENCE AND INVENTION.

#### A PHOTOGRAPHIC CURIOSITY.

"T RICK photography" has become an interesting branch of the art. One of the most curious photographic tricks is that by which one person may be made to figure in the same picture in different capacities. We may thus have a photograph of a man looking or fencing with himself, playing chess with himself, or figuring as each separate individual in a large group, all in different attitudes. A correspondent of Naturer (Paris, December 7), signing himself "G. M.," tells us how these pictures are produced. Ils writes:

"Generally these effects are obtained by using a black background. In these conditions nothing is easier, since the background makes no impression, or a very slight one, on the sensi-

A GROUP CONSISTING OF A SINGLE 19 RSON PHOTOGRAPHED FOUR TIMES.

tive plate. The subject can therefore occupy successively different positions, provided the shutter be closed after each pose, while he is changing place. Very curious effects may thus be obtained, especially if the scale on which the subject is represented be reduced. Thus a man may be shown holding on his outstretched hand his own figure reduced to the size of a statuette. But it has been recognized that the use of the black background is monotonous and does not enable us to give the picture thus presented the desired appearance of reality. There is another method, which has been in use for some time and which has already been utilized for composite photographs; it is the employment of screens analogous to those used for the so-called Russian backgrounds. For this kind of photographs there is placed inside the camera, between the objective and the ground glass, n card with a hole in it, and thus the action of the light on the sensitive plate is prevented all around the bust to be taken. For composite photography we must substitute for the pierced card a simple rectangular leaf that occupies only one side of the camera, so as to mask about one-half of the sensitive plate. As this screen is at considerable distance it does not give a clear separation, but a blur that mingles with that produced by the second pose. The effect to be produced may be arranged by examining the image on the ground glass. When it is desired to pose a person only twice-on each side of a table, for instancethis is the best method to use. But when we wish to increase the number of poses, and to complicate the picture as in the one reproduced herewith, . . . where the same person is represented four times, it is better to put the screen outside. It is necessary to select the spots to be screened on the ground-glass, and if the screens are inside, this can not be done. The following arrangement is adopted. . . . One or two blocks of wood are taken, in which have been made cuts with a saw so that they can hold pieces of cardboard. These pieces are cut to the desired size and interposed between the subject and the lens. Thus portions of the sensitive plate, as numerous as desired, are held in reserve. Of course the positions of these must be carefully noted on the ground-glass so that the extra exposures may be properly made.

Thus was obtained the photograph represented in our illustration. Pirst the extreme right-hand part was taken, making with a screen the whole left-hand part; then the extreme left was taken in like manner. After this the middle of the plate, on which no impression had yet been nude, was utilized for the other two poses by masking the desired portions of the plate with two separate screens. There is no danger that the points of union of these various petures will be too much in evidence; the edges of the screens give a penumbra which unites with that produced in the same spot in the following poses. When needed, a slight retouching of the negative will efface all trace of the process.—Tp neutation made, for Tix Litzraxy Dicaxy.

#### MARCONI'S LATEST FEAT.

THE attitude of the scientific world regarding Marconi's belief that he has recognized signals transmitted across the Atlantic by wireless telegraphy (see Tile, Literary Diezxt, last week) seems to be that of suspended judgment. No one questions Signor Marconi's high character and scientific attainments, yet it is felt that such results as he asserts that he has ntained, although the most impossible, or perhaps even improbable, certainly need confirmation. The experiments have not yet been repeated owing to the hostile attitude of the Anglo-American Cable Company, which controls Newfoundland for cable purposes until the year toys. Electricity, which makes no editorial comment, prints the following dispatches (December 18):

"Signor Marconi, tho satisfied of the genuineness of the signals and that he had succeeded in this attempts to establish comnumication across the Atlantic without the use of wires, emphasizes the fact that the system is yet only in an embryonic stage. He says, however, that the possibility of its ultimate development is demonstrated by the success of the present experiments with incomplete and imperfect apparatus, as the signals can only be received by the most sensitively adjusted apparatus, and he is working under great difficulties owing to the conditions prevailing there. The Cornwall coast is 1,200 miles from 81. John's.

"In view of the success attending those trials, Signor Marcout will for the present disregant the matter of communicating with transatianic steamers. He will return to England this week, and will conduct the experiments from Dollud. He explains that the greater electrical power there will enable him to send more effective signals. He will undertake this work himself, leaving assistants at St. John's to creet a mast and receive the signals as he forwards them. It is not possible to send return signals from St. John's until a powerful electric battery shall have been installed.

"Signor Marconi intends to build a large, fully equipped experimental station near St. John's, besides the Lupd station at Cape Race. The former will have the same equipment as the Poldbu station, and will play the same part on this side of the Atlantic as Poldbu does on the other side. It is expected that the St. John's station will communicate with New York on one side, and Cornwall on the other, being midway between the two, tended to perform the same work as a modern cable station.

"Signor Marconi announces that he will remain in England until after the coronation of King Edward next summer, and that he hopes to send the news of that event across the Atlantic by the wireless method, so as to prove the capability of the system for such purposes."

Marconi's statements are frankly accepted by The Electrical Review (December 21). Says this paper:

"From a certain point of view there is no reason for accepting this statement with a spirit of incredulity or permitting it to be made the foundation of any sensational rumor; the reason is that this aclievement was to have been expected, and that records of recent successes with long-distance transmission of signals by this particular variety of apparatus should have prepared the public mind for the reception of this further intelligence. But, nowithstanding any preparation which might have been made, the news that the Atlantic has been bridged with another method of electrical signaling is sone that can not fail profoundly to impress popular thought and to register itself as one of the significant milestones that mark the progress of engineering.

"It is not becoming at this time, with the meager information at hand, to discuss at any length the immediate possibilities of transatlantic signaling by electrical waves. If this achievement is as real as it appears to be, it is indubitable that sooner or later practical and commercial use will be found for a system with such possibilities. In the mean time such an astonishing performance may well enlist the admiration of the scientific and technical word:

The most immediate consequence that seems to be promised from these experiments is the possibility of keeping constantly in touch with ships on the transatlantic passage. If the possibilities of the new system are limited to this result alone, then it will have accomplished something that the mercantile and shipping world has long desired and that can not fail to prove of the utmost value and importance to the public at large, If, several years ago, when the steamship Umbria broke her shaft in mid-Atlantic and limped into port more than three weeks overdue, some word could have been sent of her condition and position, it would have relieved an intense anxiety that was felt in at least two countries. The value of such a system in war is practically incalculable and will doubtless lead to a revision of naval codes of strategy. Notwithstanding the object-lesson of wireless telegraphy, which has been before the public for some time, it is still too early to discern the practical value of such an extension as is indicated by Mr. Marconi's experiments,"

Engineering News, while accepting the success of the tests as published, is not quite so sanguine regarding immediate results. Says this paper:

"Whether the new system of transmission is likely to superscede he submarine cable is a question that no one is yet wise enough to answer. That wireless telegraphy can be made a commercial success over moderate distances is now well estalished; but it does not follow necessarily that over such great be made so reliable, free from interruption and from unanthorized interference that there will be no business left for the cable companies. In fact, the competition of the new method may prove just the stumius needed by the cable companies to improve their methods, increase their speed of communication, and reduce their rates so as to make their lines more generally available.

"Meanwhile the new system promises to have a field of great usefulness all its own in communicating to or between moving vessels, and thus removing, or at least mitigating, some of the danger which now attends the movement of ships at sea in time of for or storm."

Many of the technical papers, especially the electrical ones, have not commented upon Mr. Marconi's announcement, and some have not mentioned it in any way.

Discoveries from the Spectrum of Lightning.—
If we are to credit dispatches published in the daily press, Prof. E. C. Pickering, director of the Harvard Observatory, has made a discovery that, as he Is reported to have said, "opens up possibilities of a very great future and bids fair to revolutionise all clemical and physical theories of the final composition of mater." From a study of the spectrum of a lightning flash, photographed last July, it appears probable that the chemical elements are so-called compounds, even possibly hydrogen itself seeming to be of composite nature. Says the New York Times:

"Other photographs made at about the same time show the curious fact that the spectrum of lightning is not always the same. Some of the photographs show a doubling of the bright lines. Professor Pickering was at first inclined to believe that this was a sort of composite photograph, but he now concludes that the doubling looks as tho hydrogen, the only element studied in the lightning spectrum, and hitherto believed to be least likely ever to be proved a compound body, is made up of at least three components. This conclusion be bases upon the fact that there were thirty lines in the hydrogest spectrum on one photograph, there in another, and one in the third, the different flashes having been photographed under different ticrumstances. Annother remarkable circumstance in connection with the study of the Pickering spectra of lighthus and the pickering spectra of lighthus that they are similar to that of the second new star in the constellation Perseus, known as Nova Persel, No. 2, which were taken on March 23, 1001.

#### THE PRESSURE OF LIGHT.

THAT light rays exert pressure is known to very few. yet scientific men who accept Maxwell's theory of the electromagnetic nature of light have accepted this as a fact, although the smallness of the effect has long prevented its practical demonstration. Professor Maxwell showed theoretically in 1873 that all radiant energy exerts a pressure in the direction of its path. The electromagnetic wave nature of light has now been demonstrated to the satisfaction of most students of the subject, but until quite recently uo one has been able to verify the existence of this pressure. Says The Electrical World and Engineer, in an editorial on the subject:

"The push of the sun's radiant heat and light only amounts to ... about 0.7 milligram weight per square meter of normally exposed surface. In other words, a sheet of perfectly black material the meter [3 feet 1; inches] square, and supported perpendicular to the sun's moonday rays, would only receive a pressure of about 0.4 of a milligram [0.006 grain] at the earth's surface underneath the atmospheric ocean, while immediately above the surface of the atmospheric ocean it might be about 0.7 of a milligram [0.018 atmospheric ocean it might be about 0.7 o

"There would be no difficulty in measuring repulsive forces of this order of magnitude on a torsion balance, but as soon as a vame is supported on a torsion balance and exposed to radiation, either in air or in a lingbly exhausted chamber, the repulsion which is observed is very much greater than that now considered, and is observed is very much greater than that now considered, and is abalanced thermal conditions. . . . It is, therefore, necessary to remove the large Crookes effect from the apparatus before the feeble Maxwellian pressure component can be made apparent."

Two papers on the experimental investigation of this subject have recently appeared, one from Moscow by Lebedew, in the Annalon der Physik, and the other by Nichols and Ifull from Dartmouth College, in The Physical Review. Both conclude that after removing, as far as possible, the large Crookes effect, there is an observable residual pressure of the order of magnitude conforming with the Maxwellian law. Lebedew employed very high vacua and used an arc lamp to throw the radiant energy upon his suspended vanes. The difficulties are said to have been considerable, and to call for considerable experimental skill, so that still closer and more reliable results are to be hoped for; but there seems to be no doubt that the pressure of light has at last been practically demonstrated. The editorial from which we have already outsel continues as follows:

"The total luminous pressure of the sun upon the carth is about 100,000 tons, on the basis of Maxwell's repulsion law; but this is only about the 1-40,000,000,0000,000th part of the gravitational attraction, so that the astronomical influence of the radiant pressure becomes insignificant, in the case of the earth. If, however, we consider matter as separated out into a very thin layer of small spheres, each having a density equal to the earth's mean density, then the smaller the spheres the greater will be the ratio of the radiant repulsion of the sun's light to the gravitational attraction of the sun's mass, because the repulsion varies as the square of the radius of the particle, while the attraction varies as the cube. At any considerable distance from the sun, the attraction and repulsion become theoretically equal upon a spherical particle of matter . . . having a diameter about equal to the wave length of violet light. Segregated particles smaller than this would be pushed from the sun, while particles larger than this would be pulled toward it, if it is safe to assume

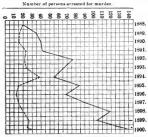

that particles can absorb energy and cast shadows from radiant waves whose lengths are large in comparison with their own dimensions."

The bearing of this on the observed repulsion excited by the sun on the tenuous matter composing the tails of comets is quite apparent, and an astronomical mystery of long standing may have thus been satisfactorily solved.

#### IS JUVENILE CRIMINALITY INCREASING?

A CCORDING to Dr. Paul Garnier, an official of the Paris
Prefecture of Police, statistics demonstrate that juvenile
criminality is on the increase as compared with adult criminality. He attributes this state of affairs to alcoholic heredity. In
Annata's d'Hygiene he sums up the question as follows:

"During the last thirty years, examples of precocity in crime have been so numerous that we are not surprised to see in the criminal courts, among murderers, a large proportion of young

people, almost children. The causes of this social phenomenon are numerous, yet it is evident that alcohol is the chief agent.

"In criminology, when we sum up the social offenses directly artirolated be alcohol, we are only mentioning a small fraction of the harm that it does. To the direct action of alcohol should be added its indirect effects through heredily. In Paris we have seen alcoholic insanity progressing with astonishing rapidity but excessive precocity in crime fills us with wonder. Totally the great criminal, the 'hero of the assizes,' as a rule is a mericalid. One fact is now admitted alcoholism is the most formidable agent of degeneracy, and as such is the direct cause of insanity and crime. If we take into consideration that drinders become the parents of epileptics and idiots, we ought not to be surprised to find criminals among children.

"In infancy the future hero of the assizes does not differ very much from the ordinary child. His criminal instincts appear only at the age of puberty."

In the opinion of Dr. Garnier, such a child should be removed from his surroundings; the state should provide for him an asylum in which he would be properly educated. Considering murder only in its relation to age, Dr. Garnier furnishes the following chart, which shows the proportion of murderers among young people (sixteen to twenty years old) and men (thirty-one to thirty-five years old).

In conclusion Dr. Garnier states that "the adolescent criminal is as a rule burn of alcoholic parents, and that his criminal in stincts are the result of a want of intellectual development." Hence his contention that asylums of a special kind, not necessarily jails or hospitals, should be provided by the state to educate young people born from alcoholic parents.—Translation made for The Laterskay Dioest.

#### DOES SALT CAUSE CANCER?

I F a man were to abstain from all alimentary substances that have leen supposed at one time or another to promote cancer, he would be very likely to starve. Salt is the latest sufferer from this suspicion. In an article in The Lancet (December 7), I james Hraithwaite, of Leeds, suggests that cancer results from the use of an excess of salt in the diet. Says The Hospital in discussing his article.

"It may be that several causes cooperate in the production of the disease; it may be that there is an over-nonrished condition of the body resulting from eating too much, and especially too much meat; or a loading of the body with effete non-oxidized matters, as among those who lead indolent and indoor lives; or, again, that some local irritant or stimulant may determine the place at which cancer shall develop; but whatever may be the part played by these conditions, Dr. Braithwaite holds that the one factor which will be found to be operative in all cases is an excess of salt in the diet. In supporting his suggestion he points to the asserted rarity of cancer among the lews, who do not eatpork; to the fact brought out by a recent research into the distribution of cancer in Buffalo, that the increase in the prevalence of cancer which has taken place there has fallen specially upon the foreign-born population, and particularly on the Germans, who eat much salted food; and to the generally asserted relation existing between prevalence of cancer and the consumption of large quantities of meat, which, he says, connotes large quantities of salt. At first sight what he says about the Jews might seem to incriminate the pig. But he points out that the pig is just the one domestic animal in which no case of cancer has yet been met with. Hence, if cancer occurs among those who feed on bacon, it is the salt and not the pig that does the mischief. Salt is a powerful stimulant to cell metabolism, as every watering-place physician knows. Such stimulation, however, according to Dr. Braithwaite, may be overdone. The farmer who over-manures his fields with artificial fertilizers finds weeds as well as cropsgrow up luxuriantly. So with the salt eater, in whose overstimulated cells small provocations, which otherwise would have passed by without effect, set up infective overgrowths. It is an interesting speculation, which, however, seems to us to remain at present in the regions of pure hypothesis."

In a later number of The Lancet (December 14), the writer of an editorial note on the subject says:

Of Dr. Braithwaite's assertion that cancer is rare among Hebrews, the writer says:

Baldness and Breathing.—Of the making of theories as to the causation of baldness there seems to be no end, says The British Medical Journal (November 30). Some of these theories are: Heredity (which only throws the difficulty back a generation or two): the hard-rimmed hat; the ubiquitions microbe, gaslight, and the wearing of beards which by derivative action

are supposed to take unto themselves the nourishment intended by nature for the scalp. Still another theory is thus described:

"A remarkable theory has recently been put forward by an American physician. His notion is that expired air contains organic matter which, if retained in the lungs and absorbed, blights the growth of the hair. He knows so much of this poison as to be able to give it a name, 'trichotoxicon.' . . . He has made experiments with it on animals and demonstrated its toxicity to his own satisfaction. The fact that men are much more liable to baldness than women finds a ready, if not altogether convincing, explanation in the ' fact' that men being abdominal breathers, they do not empty their apical air-cells; while, on the other hand, it is triumphantly pointed out that women, whose resuiration is costal, develop little trichotoxicon, and hence have luxuriant hair. Consumptive patients, in whose consolidated cells the poisoned air can not stagnate, are said to be markedly free from baldness, whilst in adults of both sexes, as fixation of the ribs comes on with advancing age, the tendency to baldness increases in direct proportion. If this theory is accepted, it is clear that the best means of preventing baldness would be the adoption of a good style of breathing. Now that this act, which used to be thought natural, has developed into a fine art, an appropriate system of 'exercises' could doubtless easily be devised. It would be an interesting spectacle to see a number of gentlemeu, whose heads are beginning to show the depredations of trichotoxicon, panting and blowing in the effort to expel from their lungs the 'subtle thief' of hair.'

Sensitiveness of a Telescope Lens.—Some years ago a contributor to The Iouth's Complantion paid a visit to Alvan Clark at Cambridgeport to witness the testing of the hage lens for the famous Lick telescope. After the usual tests for imperfections, Mr. Clark proceeded to show the wonderfal sensitiveness of the lens to outside influences, such as the heat of the human body. The contributor narrates as follows what happened:

"He [Mr. Clark] walked down to the lens and held his hand under it about two feet away. Instantaneously a marvelous spectacle burst into view. It seemed as if the great glass disk had become a living volcano, spurting forth jets of flame.

"The display was dazzling. Waving, leaping, dancing, the countless tongues of light gleamed and vibrated; then, fitfully, reluctantly, they died away, leaving the lens reflecting only a pure, untroubled light.

"What is it? How do you account for the wonder?' were the eager questions,

"It is only the radiation of heat alternately expanding and contracting the glass. If I had put my hand upon the lens itself, the phenomenon would have been even more violent."

"To a person ignorant of lenses the almost supernatural sensitiveness of a mass of glass weighing several hundred pounds was actonishing, but to the scientist it is an every-day matter, for he has instruments that will register with unfaltering nicety the approach of a berson fifty or a hundred feet away."

Changes in the Blood at Great Altitudes,-No satisfactory explanation has yet been made, says the Revue Scientifique (December 7), of the changes that take place in the blood at high altitudes. "The most commonly received hypotheses are that the acceleration of the pulse is due to the diminution of the atmospheric pressure, or that a greater number of red corpuscles is necessary to furnish the quantity of oxygen required by the tissues when the quantity furnished by the atmosphere diminishes. In a paper read before the Deuver meeting of the American Association by John Weinzerl, of Albuquerque, N. M., he shows that there are serious objections to both these hypotheses. In the first place, the absorption of oxygen by the hemoglobin of the red cells is a chemical phenomenon independent of the partial pressure of the oxygen. In the second place, it is not at all evident that the increase of the number of red cells is necessary to furnish a determinate quantity of oxygen, for Father Bert has shown that the quantity of oxygen consumed by an animal remains constant whether the amount furnished is diminished by half or whether the oxygen is furnished pure. An experiment made with white rabbits accidentally brought to light the fact that extreme changes become an experiment product the same effects as report brights. It seems, then, that cold may be sided as a factor of importance in the explanation of the changes undergone by the blood at great altitudes. The author does not assurt, however, that it is the sole factor,"—Translation made for The Latracay Duest.

Ventilation through Walls .- Since the experiments made in 1878 by Flugge on the quantity of air that passes through the walls of a room and produces what has been called spontaneous ventilation," it has been believed, says the Revue Scientifique (December 7), "that for small rooms with reasonably tight walls, the air is renewed in the proportion of 0.077 of the volume per hour and per degree [Centigrade] of difference between the inside and outside temperatures. For instance, for a difference of 14° C. [25] F.] the entire air would be renewed in one hour. Experiments to verify the exactness of these figares have been made by H. Wolpert, who has determined hour by hour the proportion of carbonic-acid gas contained in the atmosphere of an empty room, the measured diminution enabling him to show the activity of the air-movement inward. The Bulletin des Ingenieurs Civils (August, 1801) gives the following results: For rooms with a capacity of 65 cubic meters [about 2,000 cubic feetl, with masonry walls covered with paper, the hourly coefficient of renewal was 0.025 per degree of difference of temperature, the actual difference being 12.6' C. [22.7' F.]. For rooms with walls covered with oil paint the coefficient fell to 0.017, and it rose to 0.053 for ordinary whitewashed walls."-Translation made for THE LITERARY DIGEST.

#### SCIENCE BREVITIES.

Prants may contract dewase, according to M. S. Joerdain, a French investigator, who thus gives the sanction of science to the popular takes of "sick" pearls. Such diseases, says Crimer, are "modifications that cause the gens to lose the qualities that give them their value. Some consist of the pearls of the prants of the pearls of the pearls of the pearls of all ends by districting the brilliancy and, sheen of the pearl, it is may not end by districting the brilliancy and, sheen of the pearl, it is may also be the pearls of th

"A UNIQUE story comes from Pennsylvania," says The Electrical Review A certain Bohemien truck fermer had been extraordinerily successful in the early marketing and in the quality of the vegetables which he produced, and had in this way cansed his neighbors to become envious the same time the officials of the trolley company whose wires passed his field began to notice that an extraordinerily large amount of electricity wes consumed in the operation of its cars and lighting business. names had to be worked overtime. By a strange coincidence, it is said that the greater the troubles of the trolley company the greater was the pros perity of the producer of vegetables. At last the affairs of the trolley company reached such a slate that men of science were summoned to solve the problem. Oue of these men eccidentally heard of the mervelously five crops reised by the farmer. He made an investigation and found, it is elleged, that the trolley feed wire had been tapped ingeniously and that a fine network of wires ran through the soil of the truck farm, which solved the mystery. It is said that the trolley company has now brought suit against the farmer for damages for taking electricity. How many kilowatts are required to ripen a turnip is not stated.

WHY PROPER SEE APPARITIONS. - In an interesting paper on "Feirles, Apparitions, Visions, and Hallucinstions" read by Sir Lauder Brunton recently lu England, the author directs attention to the fact that there is considerable variation in the acuteness of the sense of different people and that apparitions are probably due to an abnormal condition of certain sense organs. Nature thus reports the conclusions of the writer: "Some persons perceive blue flames in the fire in winter and some persons hear the shricks of bats, whilst others are sensible of neither. In the same way there are people who feel things which others do not feel. Apparitions are probably due to abnormal conditions of the apparetus required for the reception of external impressions. The ressets inside the brain may be ca pable of contraction, like those outside, and in that case there would be auemia of parts of the brain and consequently affections of vision, hearing, smell, and taste. Epilepsy is connected in the minds of psychologists, with migraine. In many people migraine is preceded by a vision of sigrags. rather like a procession. A troop of spirits in this form appears in Dore's Daute end Doré suffered from headache of this kind. Stories of fairies might partly be referred to visious as well as to the aboriginal race meutioned by Prof. Rhys. Speaking of Mohammed, Sir Lander Bruuton de scribed his visions, trembling fits, and convulsions, and said it was curious to energlate how different might have been the course of the world's his tory if the prophet had been thoroughly dosed with bromide of potassium.

#### THE RELIGIOUS WORLD.

## WHAT PERCENTAGE OF YOUNG MEN GO TO CHURCH?

A N investigation into the attitude of young men toward religion and the church was recently undertaken by secretaries of the Young Men's Christian Association in cooperation with the Federal Census Bureau. Representative cities, towns, and country districts were selected in different parts of the United States, and in individual cities representative wards were selected and average blocks in these wards were visited in a house-to-house canvass. A number of questions were framed, and a blank containing them was med with each young man, between the ages of sixteen and thirty-five, who was questioned. The results of the inquiry are thus summarized in Association Men (New York, Novemberr):

"In the country, one in two young men go to church regularly; one in three occasionally, and one in fourteen not at all. In the city, one in four regularly; one in two occasionally, and one in seven not at all.

"In families where the father and mother belong to the same church, seventy-eight per cent, of the young men are church members. In families where the father and mother are church members, but do not belong to the same church, only fifty-five per cent, of the young men are church members. In families where but one of the parents is a church member, only fifty per cent, of the young men are members of churches. Where the father and mother are both Catholics, only eight per cent. of the young men are not church members. Where the father and mother are both Protestants, thirty-two per cent. of the young men are not church members. Where one of the parents is a Catholic and the other a Protestant, sixty-six per cent, of the young men do not belong to a church. Where the parents are members of Protestant churches, but do not belong to the same church, fifty per cent, of the young men of these families are not church members. Where one of the parents is a Catholic, fortyfour per cent. of the young men do not belong to church. Where one of the parents is a Protestant, fifty-one per cent, do not belong to church.

"In the blank the following question was asked. 'Why are you not a church member?' To quote a few of the reasons given in the order of their frequency: 'Indifference.' 'No reason.' 'Can be as good a Christian out of church as in.' 'No time because of work.' 'Hadn't thought much about it.' 'Dun't see the need.' It is interesting to notice that a very small per cent. of the men avow acrositions."

"Another question was asked of the men who were not going to church, why they did not attend. Among the answers were: 'Sunday work.' 'Indifference.' 'Not a Christian.' 'More pleasure other places.'

"Here again only two or three out of all those answering this question spoke about being agnostic."

The Interior (Presb.) declares that "for this reconnoissance of a field where the forces of evil drive their attack more keenly than anywhere else, all Christians owe a debt of thanks to the Association secretaries," and continues:

"The tradition has been that in the average city at least threefourths of the young men never heard a sermon. This new enmeration indicates that the proportion of utter indifference is not more than one-fifth that great. One in twenty young men, we are accustomed to say, belong to church in the cities, but here are facts seeming to mean that we have guessed at only about one-fourth the actual ratio. All in all, the hold of Christianisty upon young men is so much better than it has been our custom to think that every Christian laborer ought to take new heart and good cheef from these statistics."

#### The Watchman (Bapt.) says:

"A large proportion of young men do not profess to be Chrissans, yet believe in the reality of the Christian life. Their reasons for not becoming Christians are independent of their mental convictions, and are founded on a reluctance to assume the obligations, moral and religious, of the Christian life. This agrees with the common observations of Christian workers among young men. Infidelity of the Tom Paine type has become rare. The attitude of college men and of public men toward Christianity has completely changed in the last fifteen years. There is no longer any cause for a young man to be ashamed to be known as a Christian. It has become respectable and even commendable in the eyes of the secular world.

### THE ROMAN CATHOLIC EXODUS FROM FRANCE,

In Elizabethan times, laws against the Roman Catholics were made so severe that the Roman Catholic orders were compelled to seek refuge in France and other continctal countries. Now, in the reign of Edward VII., the tide is flowing the other way, and the members of Roman Catholic orders and institutions in France are returning to English soil in large numbers. Not England only, but Spain and other European countries, and even Canadáa and the United States, are being sought by Jesniss and by monks and nuns from the monasteries of France. Says a writer in Harper's Weekly (New York):

"The reason for this second pilgrimage of the friars to Bagland is that France recently passed a measure, known as the 'association act,' which requires every religious body within its confines to make public the source and disposal of all its funds, and to publish the rules governing these bodies. There were in that country 16,46 establishments of a religious character which were subject to the terms of this act. Of this number only 5,144 have applied for the registration provided for. This leaves a balance of 11,22, which, by their apparent unwillingness to become registeries, would make well as the rather than comtractions, and the state of the state of the state of the with regard to their finances, they will leave the country which has been their home for so many years."

Mr. Wiftranc Hubbard, writing on "The French Association Law" in The Nitetenth Century and After (November), thinks that the Roman Catabolic orders in France are responsible for their own troubles, and maintains that the recently enacted law was but the logical culmination of a long struggle between the civil government of France and religious orders that not only refused to acknowledge its authority, but in some cases actually conspired against it. He says

"The sedition that lurked underground and never came out into the open, that spent its time and its forces in unwearying efforts to undermine and subvert the authority to which it vowed no allegiance, that never lost an opportunity of fomenting troubles and stealthily encouraging conspiracy against that authority, how could it be dealt with? The question had to be solved, for every day increased the danger which rose from its neglect, Already wealthy, these communities were rapidly amassing more wealth, and the large means at their disposal were almost openly used for the furtherance of political ends. Entrusted with the education of the children of the most influential classes of France, they abused that trust by instilling principles of disloyalty to the state which their pupils might some day be called upon to serve. Wherever trouble arose, or any conflict in which the constituted authority of the state was concerned, they or their emissaries were to be found somewhere in the background watching to see if profit might be drawn for themselves by helping to defeat or thwart the side that the Government seemed to espouse. It mattered nothing what was the nature of the case or the justice of the cause, whether it was a strike of workmen or the barbarous sacrifice of a French soldier to save the credit of his chiefs; their restless hands were always plucking at the strings, their husy brains were always scheming with ever the same end in view-the defeat, the discredit, the ultimate downfall of the regime under which they lived,"

The Government had to act, declares the writer, and it took the only course which could have been dictated by moderation and common sense. It passed a law limiting and regularizing the right of association. The Catholic party, while always insistent upon the most stringent regulations for political and social associations, would be satisfied with nothing less than complete exemption for the religious orders, ignoring the fact that the present law was but an honest attempt to deal with lay and religious bothes alike. Mr. Hubbard continues.

"It is well to remember these facts when one is moved to a sympathetic pity for the dispersed communities. For the Jesuits, Assumptionists, and some of the Passionist communities, pity in any case is unealled for; they provoked the storm, and have only suffered a just retribution. . . But it is impossible mot to sympathie with others. How many bevildered, helpides women, one wonders, are now wandering about Europe seeking seletter and being detied? Why slioudl these poor women, whose life spent in devotion to others has utterly unfitted them to take care of themselves, be sacrificed and turned out into the world, when it needed but one word from the headquarters in mission to seek authorization was withheld in their case, in order to give a touch of pathos to the exodus, and make the action of the French Government appear odious."

A very different view of the religious problem in France is taken by Richard Davey, a writer in *The For Inightly Review* (December). "To my mind," he says, "and I should think to that of every liberal minded Englishman who has examined the question impartially, the associations bill is a very unjust and sillberal measure, for surely in a country which boasts of its freedom, and in an age when men can openly express their opinions, be they ever so eccentric and even dangerous, it is almost incredible that a certain class of respectable citizens should be treated as pariash because they elect to live in community, wear a distinctive habit, and pass their lives in study, prayer, and works of charity." He says further:

"The associations bill, which has been in preparation for fully wently years—being merely a development of M. Ferry's famous decrees—has a twofold object, the suppression of the religions orders and obligatory secularization of education. When the historian of the future comes to chronicle the age in which we live, and deals frankly with matters that we sow handle with kild gloves, undoubtedly his most interesting chapter will be the one describing the process of dechristianization now in progress throughout Europe. Living in the midst of it, we do not perceive its insidious encroachment and are loath to believe that the aim of so-called anti-chericalism in Latin Europe really means the supplanting of Christianity by a form of nebuous atheism.

"As to the Jesuits, they, of course, will be dispersed, leaving, as we are assured, teachers well trained in their methods to continue their work in those colleges where they have been sufficiently successful to excite the jealousy of the Government. With respect to the alleged conspiracies against the republic, in which the Jesuits and other associations are said to have been implicated. I think that one good public state trial which resulted in conviction would do the accused far more harn than the associations bill. I can, however, well believe that they do not like the present Government, for the reason that it has done nothing but harsas and worry them since it came into existence, and I am inclined to think that if the republic had given then the same liberty which they enjoy in England and America, they would long ago have become us stanchest supporters and friends."

Mr. Davey states it as his conviction that the associations bill will prove "a very Pandora's box, overwhelming with confusion and vexation of spirit all who have meddled with it." He continues

"In the long run the orders will have the best of 11, and years hence will be back in their old homes as fourishing as ever. I am certain that not one single penny of their money will benefit any one single Socialistic or other scheme, but that, on the contrary, the only people who will receive any profit by the proposed spolitation will be the lawyers on both sides, for the bill is so ill-conceived and so badly expressed, so at least I am assured by a leading French jurist, that unless a draconian edict is passed expelling all the religious can masse its execution will lead to endless lawwiits between the congregations and the state. I am equally certain that the departure of some of the orders, the Benedictines from the abbeys of Lyguet and Society.

teams, for instance, will give rise to a great deal of suffering among their poorer neighbors, for the abbots of these and other large monasteries, who have left Prance, had, of course, to dismiss many thousands of workmen at the very worst season of the year. The 150,000 unfortunate people who are cared for by the monks and nuns—the halt, the lame, and the blind—may also find themselves one fine morning turned out into the street, their old friends and hosts being no longer able to support them. The Government will also have to count with the Holy See, which may, if provoked, transfer the guardianship of Catholic interests in the East from France to Germany and Italy, both of which nations are eager to make very handsome concessions to the papacy in exchange for so conspicuous a favor."

#### MODERN CRITICAL THEOLOGY AND THE PERSON OF CHRIST.

A LTHO throughout the nineteenth century the person of Jesus has been the center of "progressive theology," this has never been so much the case as at present. The problem has been intensified by that much-discussed proposition in Harnach's "Wesen des Christentunis," in which he declares that the Father only, and not the Son, originally constituted a part of the Gospel proclamation. This has called forth an effort to determine exactly what the real relation of Christ to original Christianity was, and a discussion of this question from the pen of an advocate of the liberal theology of Harnack is found in the new work of Prof. P. Wernle, of the University of Basel, entitled "Die Auflange unserer Religion." From this representative volume we quote tile following views.

"Christianity came into existence through the actions of a layman, named Jesus of Nazareth, who began his public career with a more than common consciousness of prophetic power, and who understood how to attract men so that, notwithstanding the disgraceful form of his death, they were willing to live and to die for him. Jesus has coined new words and has scattered abroad new thoughts; but it was only his personality that gave these words and thoughts the victory which they achieved over the world. Men who make history impress their personality on its records. Jesus, however, did not speak with the consciousness of a superhuman being, and this fact furnishes the explanation for the origin of Christianity. The remarkable feature in lesus is that this consciousness of being a prophet was united with a deep humility before God. It is not altogether possible for ns to understand psychologically such a consciousness and heart. There can be no doubt that Jesus himself already felt the consciousness of being the Messiali, but the origin of this high consciousness remains a secret. The effort to trace the beginning of this conviction to the time of his baptism, as is done in the Gospels, is incorrect, as Christ himself never appeals to visions, In the life of Jesus, his baptism and his transfiguration can be stricken out, and nothing essential is lost. The main thing is not that lesus had special relations to God, but rather that these relations drove him among men. Then, too, the inadequateness of the Messianic ideas of Jesus is evident. Fortunately Jesus is something different from and greater than the Jewish Messiah. That Jesus and the Messianic idea were not intimately connected is evident from the narrative of the temptation. His activity in that capacity was a free addition to his ealling and career. His whole development was a struggle with the inadequate factors in the Messianic idea. But the end of his career was an accentance of the Messianic title and calling before his death; otherwise he would have been compelled to give up both himself and his God.

"Jesus died with full faith in his speedy return in Messianic glory. In embracing these ideals he did not only err in reference to the point of time, but the whole idea is fantastie, that a man who has died should return again in the clouds of the heavens. This notion is the product of the thought and psychology of the antique words. In this one case only the inadequate element of return is the tribute which Jesus pull to the religious creed of his times. He accepted the Messianic dear, changed it, struggled with it, but it remained a deception, and this was transferred to him. So not God and Son of Man are the terms which Jesus applies.

plies to himself; the first has been an unfortunate term because it has called forth a deluge of metaphysical and psychological appeaulations, and the latter name, taken from the Jewish apocalypses, was never understood by the Greeks. In this way the alypses, was never understood by the Greeks. In this way the names were from the beginning sources of evil for the new religtion, and called forth, in the early church, two movements of way leading to the Messiah of the apocalypse, and the other to the second Adam of Paul and the Logons of the Fourth Gospel.

"The death of Jesus was a result of his opposition to the Pharisees and the scribes. It seemed to bring with it the end of the cause which he represented. But just the opposite result took place. What faith in the living Jesus could not effect, namely, the founding of a new religious communion, the separation from Judaism, the conquest of the world, the belief that Jesus had risen again from the dead accomplished. The disciples appealed to certain appearances of Jesus as the basis of their faith but the enlightened Christian of the day hinds no difficulty in comparing the property of the control of

This critical reconstruction of the person and mission of Jesus by Harnack, Wernle, and others of the advanced school, has called forth determined defenders of the old positions. Among these is Rev. Dr. Rupprecht, in his work "Das Christentum von Adolf Harnack," in which he maintains that these new views directly antagonize the decrest experiences of true Christians. A thoroughly learned reply to Harnack is the work of Professor Walther, of Rostock, entitled "Harnuck's Weseu des Christentums." in which are used the cool but pointed weapons of modern scholarship; while the work of Schick, in his book "Wesen des Christentums," is more popular aud an appeal to Christian feeling. One of the most interesting gladiators in the arena is the Roman Catholic professor, Reinhold, of Vienna, who, in a small book also entitled "Wesen des Christentums," shows that Roman Catholic scholarship must also reject the reconstruction of the person and work of Christ by liberal Protestant theology. -Translation made for THE LITERARY DIGEST.

## IS RELIGIOUS EMOTION THE SECRET OF

A N English author, Mr. H. Fielding, has recently published a work entitled "The Hearts of Men." In it he advances the view that all faiths, in so far as they can be expressed in creeds, are equally false, while all religions, in so far as they are expressions of emotion, are alike true. This writer brings under three heads certain religious instincts, always existing, modified from time to time by circumstances and by brain development. These are: the instinct of confession, the instinct of payer, and the instinct of societies. It emaintains that "it is only to satisfy and explain these fundamental cravings that men have volved a god or gods." In this inversion of the ordinary argument lies the key to Mr. Fielding's book. A reviewer in the London Spac-tator (November 10) says:

"He [the author] would have men go behind all their theories of the supernatural to what he considers the practise of true religion, which is 'the cult of the emotions.' This cult is, he believes, the highest exercise of which the mind of man is capable, and he should pursue it with all his might. To the commonsense questioner who asks, Why? he has only one answer to give -in order that 'he may fill his heart with beauty.' Mr. Fielding's position is by no means that of the religious-minded agnostic. He does not say, 'I do not know.' He evidently believes that he does know, that he has discovered the secret of all the faiths, and found, moreover, in ' the recognition and cultivation of the more beautiful instincts and emotions," that which all men seek - 'the great peace,' . . . Is a man who studiously cultivates his religious emotions really pursuing the highest nim of which human nature is capable, and are the three emotions of which Mr. Fielding speaks, after all, the most worthy of cultivation? To the first question we would answer emphatically, ' No.' And

with regard to the second question, in so far as the instincts of confession and sacrifice are concerned, we would reply that they are not by any means the highest instincts common to man,—unless by sacrifice we mean self-sacrifice, which Mr. Faliging plainly does not mean, and which, indeed, could hardly be considered an instinct at all. With regard to prayer, we are a little doubtful what our author implies by the word, seeing that he does not derive the desire to pray from the belief in a Being who hears the jettlion. If he is recommending a conscious formulation of instinctive moral, religious, and so God-seking, aspirations, and so God-seking, aspirations, the highest exercises of which the human mind is capable. If the highest exercises of which the human mind is capable. On the other hand, he means nothing but the cultivation of monitoring the second of the control of the

Of Mr. Fielding's "instinct of confession" the reviewer says further:

"Of conscience as an elevating force very little is made in this book, except in so far as it impels men to confession. But surely if confession is to be cultivated without reference to moral improvement, it is not only not elevating, but is positively degrading. . . . It may prove as dangerous to the moral nature as perpetual poulticing to the bodily. Any one who has had anything to do with children knows how too strong insistence on confession will make children go perilously near wrongdoing for the luxury of confessing their misdoings. We do not gather that this violent advocate of emotional religion would instigate confession to the person offended. Many men, he assures us, will confess to a stranger. -he himself has been the recipient of such confessions. True, he adds, his penitents were Burmese; and one can not help wondering whether, finding what a religious respect the white man had for the disclosure of evil deeds, some of these brown sinners did not draw on their imaginations at the same time as they relieved their consciences. The Roman Catholic Church, which has, Mr. Fielding argues, assimilated and made her own almost all the instincts of the human heart, encourages and commands auricular confession; but it would be a gross libel upon the Roman Catholic Church to suggest that she asks men to confess in order to give them the pleasure of telling. or primarily even in order to unburden their hearts. She requires of her peniteuts, before she allows them to confide in her at all, that they should believe that she possesses a delegated power to forgive sin, and she then absolves them to the intent that, being relieved of the burden of the past, they may enjoy greater freedom to do better in the future. Direct confession to God as it is practised by Protestants and Mahommedans Mr. Fielding regards as merely an expedient of the proud, who feel ashamed to confess to men, and are thus obliged to cultivate their emotions in secret

When The Spectator's reviewer comes to the cult of "sacrificial" emotion, as Mr. Fielding expounds it, he becomes severe in his comment. He says:

"We are brought face to face with a very fundamental instinct indeed, and, we should be inclined to say, with a very base one. Mr. Fielding describes for our edification a religious festival amony coolies, at which a goat is sacrificed in a singularly cruel and revolting manner (a priest puts it to death with his teeth). The emotion evinced by the worshipers simply testifies, we are told, to the existence of the religious instinct, while the priests make their little scientific theology to explain and apologize for this peculiar emotion. So arose sacrifice, the author explains, out of some hidden emotion in man's heart, for 'man and his necessities are the eternal truths, and all his creeds are hut framed by himself to minister to his needs.' To people in any stage of civilization, he assures us, the sight of suffering and death is very attractive, and 'if not witnessed too often or in wrong circumstances,' such sights 'are by no means brutalizing, but quite the reverse.' Those who have little opportunity of looking upon such scenes 'seek in art the stimulus they require.

This critic finds it difficult to write coolly of such a "repulsive cult" as Mr. Fielding dignifies by the name of religion, and he closes his review by saying:

"Religious emotions which bear no fruit either in faith or benevolence are better suppressed, and belong. like the sacrificial instinct,' to the category of savage survivals. Such emotions as are not inherently barren may, as Newman says, 'condense within the soul, and change to purpose strong '; but even these should be husbanded as a force, not wallowed in as a luxury. The highest instincts of religion take birth, as we believe, not amid the whirlwinds of emotion, but in the quiet recesses of conscience. Moved, no donot, by the justinet of confession, Mr. Fielding confides to his readers that when as n young man he renounced his faith in Christianity, he was actuated not so much by obedience to the dictates of his renson as by his determination to be free-not to worship a God who interfered." fusal to bear this interference lies, we believe, the denth warrant of the true religious instinct; just as in submission to it lies the germ of faith. A determination to get quit of conscience is the destruction of the thread of communication between the divine and the human which no 'cult of the emotions' avails to reestab-

#### A PLEA FOR A COMMON PROTESTANT COMMUNION TABLE.

CANON HENSLEY HENSON, of Westminster, a prominent English Broad Churchman, proposes to draw the different branches of the Protestant Church into closer bonds of fellowship by breaking down the barrier between Episcopal and Nonconformist commentents. "The inevitable expression of Christian fraternity," he says, "is the common reception of the Lord's Supper"; and "it is not consistent with self respect to exchange compliments and congratulations with fellow Christians whom, none the lens, you repel from communion and officially regard as schismatics." He continues (in The Contemperary Review, December).

"The great English denominations have spread throughout the world, and, unless some unimaginable forces reverse the prevailing tendencies, they are destined in the future to take a paramount position in the reformed churches. English churchmen are slow to appreciate the magnitude and rapidity of their progress. Even within this island their growth has greatly exceeded that of the Church of England, and the little more than a century ago the 'dissenting interest' seemed evidently waning, it is probable that at this moment half the professing Christians in the country are Nonconformists. When, however, we look beyond the confines of Great Britain, and consider the religious state of the British Empire and the United States, the importance of non-Episcopal Christianity becomes immediately apparent, The National Church, then, does not now stand over against a few novel and henvily suspected sectaries, but has to define its nttitude toward a federation, or quasi-federation, of organized and militant churches, some of which represent a religious energy and a volume of Christian conviction far greater than its own. Numbers, it may be said, are properly irrelevant to truth-the title-deeds of a religious society can not be its success. But the 'free churches' are not only numerous and increasing societies: they are mighty evangelistic agencies; they add their full contribution to theological science: they enrich the spiritual life of Christendom with their full proportion of beneficent and saintly lives."

Why can not the communicant members of the non-Episcopal churches communicate in the Church of England? asks Canon Henson. It may be replied that there is nothing to prevent Nonconformists from communicating with Episcopalians now, since it is the custom of the Church of England to admit to the Sacrament all who present themselves, asking no questions and interposing no difficulties. But, as the Canon points out, the results of this policy have been the opposite of what might be desired. For while the "less desirable and conscientions" Nonconformists have availed themselves of the privilege, the "more religious and sensitive" have, as a rule, refrained from presenting themselves.

The two formal barriers that stand in the way of intercommunion are the clause in the Prayer-Book which declares that "there shall none be admitted to the Holy Communion, until such time as he be confirmed, or be ready and desirous to be confirmed": and the doctrine of Apostolic Succession. Canon Henson does not consider either of these obstacles insurmount. able, and urges historical justification to sustain his conclusions "The rnbric in the Prayer-Book," he maintains, "ought not to be regarded as asserting a principle of universal application, viz. the necessity of Episcopal confirmation as the preliminary to the recention of the Holy Communion, but as the domestic rule of the Church of England, to which its members must conform as the condition of being admitted to the full privileges of members." On the second point he says: "The antiquity of the Episcopal government and its great history may be subjects of legitimate satisfaction to the members of an Episcopal church. may justify a jealous retention of that order, and authorize an exceptional confidence in its practical value, but I wholly fail to see how either the one or the other can form the basis of a divine right, and require the condemnation of the non-Episcopal ministries." He concludes

"If, then, we are compelled to admit that non-Episconal ministries are not less spiritually effective than our own, that the sacraments administered by them are equally with ours the channels of those supernatural graces which crente the Christian character, that all the tokens of the Holy Ghost's presence and action are as evident in them as in us, by what right can we continue to exclude them from our frank and affectionate fellowship? By what right do we ignore them in our parishes; refuse them all access to our pulpits, urge their clergy to repudinte their orders, and facilitate their reordination? We treat them as the Roman Catholics treat us, but with even less excuse. This is the root of bitterness in our religious life, and until it be plucked up there will be no sincerity in our professions of frater-The best Nonconformists resent most justly the insult implied in exhortations to reunion, however courteously expressed, which require of them an act of spiritual apostasy."

A Swiss Passion Play.—It was to be expected that the fame of the great Passion Play in Oher-Ammergau would inspire attempts at reproduction, and several such have already been citronicled in our pages. The latest presentation of the Christ-drama is that reported from Schach, a remote and quiet little village in Northern Switzerland, as yet unspoiled by the tourist. Over three hundred and fifty actors, singers, and musicians participate in the play, all being inhabitants of the village, and fourteen performances have been given during the past summer. Says the Rev. Charles S. Macfarland (in The Congregationality and Christian World):

"In general the plan of the great model [in Ober-Ammergau] has been followed, but the detailed carrying out is original, sometimes resulting in defect, at other times in marked improvement. There is much less of dramatic work, comparatively litted dialog, with correspondingly more tableaux, music, and recitation. The rendering at Selzach is rather more oratorio than play.

"The musical and dramatic ability of these humble tillers of the soil and makers of watches, remotely situated from the finer influences of art, with only the ruder impulses that physical nature gives, is wonderful. It rises to the level of genins. The choosing and training of 350 actors, musicians, and singers for the rendition of Mozart and Mendelssohn and Wagner out of a simple mountain hantlet of , 650 untutored people seems little less than miracle. The daring of their undertaking is itself a tribute to their faith and courage."

The whole production, continues the writer, is unmistakably animated by a sincere religious feeling and purpose, and the mnnagers of the play have sought to repress any attempt to make financial gain a prominent end.

BBHOD JOHN H. UNCENT, who for he past two years has been resident in switzerland in charge of he work of the Methodis Episcopal Church in Europe, has been oppointed us a delegate to the Western conferences in England eart June. In July Hishop Vincent will issuit for the United States and spend August in his old work at Cheutauqua, with which he is still officially connected.

#### FOREIGN TOPICS.

#### WILHELMINA AND HER TROUBLES.

N O Dutch newspaper of standing has given publicity to the stories affecting the private life of the Queen of Holland. It is true that Socialist weeklies have copied the accounts printed in France, but no comment from a Dutch source is available beyond the following, which appeared in the Nieuwe Rotter-damsche Courant:

"In view of the palpably false rumors lately circulated in foreign newspapers concerning Her Majesty the Queen and His Royal Highness the Prince of the Netherlands, we are authorized to deny these tales and to state, on the highest authority, that they are absolutely without foundation."

Familiar as is the despatch in *The Daily News* (London) which purports to give a full account of the incident, it may be reproduced here:

"Prior to Queen Withelmina's illness, a slightly heated discussion took place between Her Majesty and the Prince at a dinner at the Chateau of Loo. The Queen, annoyed at some inattention on the part of her husband, used a somewhat harsh word, and the Prince, losing his temper, insulted the Queen. Lieutenant Van Tets. Her Majesty's aide-de-cause, is stated to have then intervened and to have reproached the Prince with the insurprived of his conduct. A challenge ensuel, and a duel with Tets was wounded and has since been dangerusity ill, peritonsith having supervened. Shortly afterward Prince Henry fought a duel on account of the same affair with another gentleman of the court, who sustained a slight wound."

This precipitated the sensation, and newspapers outside Holland at once took it up. The Anzeiger (Oldenburg) denied that Prince Henry was in any way responsible tor the trouble, but the Duchess of Oldeuburg is Prince Henry's sister, and she unquestionably inswired this utterance. It ran

"It is untrue that the Prince of the Netherlands gave himself up to gambling. He had no pecuniary embarrassments prior to his marriage. He is now financially independent. Besides, money matters could not affect a love match."

The Datch people love the Orange dynasty, according to the Ague Freie Presic (Vienna), and hold the belief that their national independence is bound up with its destiny. They are jealous of German influence, and hence the Prince Consort will not escape prejudice. But it is the Troups (Paris) which seems to have spoken the last word. It gives an claborate account of the trouble, vouching for its accuracy. As this reliable French newspaper has access to authoritative sources of information, its version, given below, is generally accepted

"Every one knows that Queen Wilhelmina, who, like all the Oranges, has a will of her own, married for love. Why not admit frankly that the Dutch people were somewhat disappointed by the match? The young Queen's choice was not the ideal husband dreamed of by many. But she had freely chosen him, and he was accordingly accepted by the nation, which adored its little blonde Wilhelmina. In these circumstances, the happiness of the royal family seemed assured. . . . Has that happiness been destroyed? This was the question asked of one of the most notable personalities in the political life of Holland. 'The Queen loves the Prince dearly, answered the individual referred to, 'She married him for love and this love has strengthened since. So far are they from living in discord, that the couple are models of married harmony.' It was the Flemish press and some miserable little Socialist sheets that sowed these calumnies. They went to extravagant lengths. It was alleged that at the time of his marriage the Prince was overwhelmed with debts. Yet he bought not long afterward the lordly domain of Dobbin, paying for it 1,500,000 marks. He unturally wanted to visit his own family occasionally and have a house in his native land. It has been insinuated that the Queen herself paid for this property. This lie has been exposed. The Prince's eldest brother has indulged in wild extravagance, but the Queen's husband himself has never been dunned by creditors."

A very interesting aspect of the situation is broached in this delicate and discreet manner;

"The Queen's hopes of maternity have been prematurely dissipated. For some weeks there was fear of such an outcome, and to-day the fact is certain. But what does that prove? Are not queens laidle to accidents of this sort, like ordinary mortais' I scruelty the only thing that induces these calamities? The event was wholly unsepected, a fact which explains the more of the property of the control of the co

Thus this well-informed authority, whose account, as already hinted, is accepted as the true story of Wilhelmina's sorrow. It may be well to take leave of the subject with the following observation from The Weekly Mail (Bangkok):

"If five years had passed without Queen Wilhelmian giving birth to a citild, her marriage would have been dissolved by the Dutch parliament. The constitution of Holland also provides that, if the Queen has a son, she us to abdicate in his favor when he reaches the age of eighteen."—Translations made for The LITERANY DIAST.

## A MYSTERIOUS MEMBER OF THE ROOSEVELT CABINET.

A SENSATION has been created in the press of two hemispheres by a "warning" which, according to an article in The Ninterionth Century (London), a member of President Roosevelt's Cabinet addressed, unofficially and in a triendly spirit, to England. The warning reaches the public through Isi'r Wennyas Rend, who writes the article. He was in conversation with "one of the most distinguished members of the Cabinet" at Washington. The member is not indicated by name, but he said, according to Sir Wemyss Reid, that England ought to end the Boer war at once.

"My friend went on to tell me of the almost daily appeals that were being made to the United States Government by the representatives of European Powers to take some step for ending the war. 'Of course we can do nothing. We are powerless; every-body is powerless. It is your own country alone that can solve problem. The European Powers know that, and when their ministers make representations to us here, they always declare their fovernments are backing them. Does Englanrees all cell the gravity of the situation, and the extent of danger in which this state of foreign feeling individes her?"

Astonishment was expressed throughout the European press upon the publication of these particulars. The Independence Relge (Brussels) pronounced the affair a "sensation," and credited Sir Wemyss Reid with reproducing the exact words of the mysterious member of the Cabinet. But this the Englishman does not claim. He jotted down notes of the conversation after the interview, but while it was still fresh in his memory. The Times (London) prints the following, which, in the case of a European complication of this sort, would be termed "inspired":

"Sir Wemyss Reid has misunderstood both the nature of this conversation and what was saud to him. The conversation was supposed by the minister to be private. The statements above quoted were made by Sir Wemyss Reid without authority and are misleading. In other statements in the same article Sir Wemyss Reid with missfer's mouth."

It will be observed that the London newspaper commits the blunder of referring to the mysterious unknown of the Cabinet as a "minuter" instead of as a "secretary," The Phot conjectures that it was Mr. Hay who did this talking. The only clues to the identity of the commanicative secretary afforded by Sir Wemyas Reid are first that "throughout his life he had entertained a desire that was bassloante in its intensity for the maintenance of union and good-will between Great Britain and the United States"; second (this point has already been mentioned), that he is "one of the most distinguished members of the Cabinet," and, finally, that his name, if Sir Wemyss Reid "were to give it, would add immense weight to his opiniou." Now Truth (London) says.

"On the appearance of the article in *The Nineteenth Century*, and, Smalley, the correspondent of *The Times* in America, and devoted adherent to the gospel of that paper, telegraphed over to say that Mr. Hay had informed him that he had not made any such observation to Sir Wemyss."

The "sensation" has drawn a letter from Sir Wemyss Reid to the London Trues, in which he complains that the corresponent of that paper "appears to imply that in one instance I have been guilty of a breach of confidence in my treatment of a private conversation." But not a syllable more has transpired on the subject of the identity of the communicative secretary, and this member of the Roosevelt Cabinet remains as mysterious as

## "HUNGER DUTIES" AND THE UNEMPLOYED IN GERMANY.

A TTEMPTS to explain Germany's serious position and to predict the outcome of the conflict between the impoverished landlords and the beggared working elasses are filling columns in the Burquean press. "Hunger duties" is the term appilled by the Socialist 'Iervaties' (Berlin) to the tariff on cereals
demanded by the landed aristocracy. This paper puts the number of the numelhoyed in Berlin at 80,000, but more conservative
estimates are 35,000 to 20,000. However, the tone of the German
press in dealing with the crisis is so very partiau that it may
be well to begin with the risks is so very partiau that it may
be well to begin with the crisis of a detached observer like
the London Schefator. which say

The landlords, always poor for their position, which is socially better even than in England, had been heavily hit by falling prices and a rising rate of wages, due chiefly to the swarming toward the towns and emigration, and the prospect of increased incomes proved too much for their habitual caution. They mortgaged their estates, bought shares in new industrial companies with the proceeds, and awaited the coming wealth with implicit confidence. Look, they said, how rich Englishmen are. For two or three years the confidence seemed justified, Every kind of undertaking appeared to prosper, loans were easily procurable from 'spirited 'banks, foreign commerce was brisk. and new steam lines were continually projected. The court fed the prevailing excitement, the Emperor encouraging every now development with his approval; the Government proposed new enterprises in the shape of canals, and new expenditure on the navy 'to protect our growing commerce'; and every thing and person was prosperous till the reaction came. Then it was discovered that everything had been overdone, that there were too many factories, too many mercantile companies, and, above all, too many steamships. There was an overplus of articles with nobody-to buy them. . . . The landlords could not meet their mortgages, the citizens were driven back on their small trades, and the employees were ent down or discharged by tens of thousauds. It is admitted that fifty thousand men, most of them heads of households, are out of employ."

The view thus outlined is shared by the entire British press, which is also of opinion that the Reichstug will not take the wisest measure to improve the situation because it is dominated by the great vested interests. But The Speaker (London) brings out another point thus:

"Italy, Austria, and Hungary are all preparing to denounce their commercial treaties with Germany, and to raise their own tariff against Germany if Germany raises her tariff against them, and the opinion is widely expressed in influential quarter in Budapest, Vienna, and Rome that a real political alliance is incompatible with commercial war. Altogether the situation is the Continent as well as at home is darker than it has been for many years past,"

Turning to the German press, we find a most excited state of partizan feeling. The Socialist Forwarts is force in its denuneiation of the landlords. The "homegred uties" will add about four dollars to the annual bread bill of the workingman, a burden which all parties admit to be severe, and which prompts the Socialist press to demand the exhibitshment of a penarment of

DEMANDS OF THE AGRANIANS IN GERMANY.

LEADER OF THE AGRAMANA." "Conductor, I want a better seat. The Agrarians have an undoubled right to ask that their wishes be complied with, in the interest of the whole community."

\*\*Aladderadates\* (Regular)

labor. The Vossische Zeitung (Berlin) inclines to advocacy of the commercial interests as distinguished from those of the agaraians. It is particularly alarmed at the prospect of tariff wars with Austria-Hungary, Russia, and the United States. It

"Such a development would be a catastropho fatal to Germany's well-being for a long time to come, and the severest blow to our industrial life, . . . And what is to be done in the face of the growing scarcity of work? The empire, the states, the cities, must henceforth concern themselves with this weighty question, The right to work may not be recognized, but the unemployed can not, nevertheless, he left to destitution and hunger. Even the poorest must cat to live. And must their bread, therefore, be made dearer? All branches of the Government must strive to minister to the general need by encouraging public works and general enterprise as much as possible. It must be remembered that winter increases the suffering of the poor. If the 'canal' is to be built, there could be no better time for setting about it than the present. But no period is so unfavorable for an increase of the tariff on food stuffs as one of economic depression. The chairman of the committee of Berlin metal manufacturers is energetically advocating the temporary suspension of the duty on American meat, that the food problem for workingmen's families may be easier of solution. But it must appear an inadmissible proceeding to every one in view of the reductions in wages and the wholesale discharges of wage-earners to increase the duties on the necessaries of life. No one seriously believes in the theory that the foreigner pays the tax. What are the agrarians striying for if not for a rise in the price of their products? Not one agrarian would lift a finger for a higher tariff if he did not expect higher food prices from it. But what workingman will let himself be persuaded that, in the event of dearer bread, he will have it made up to him in the shape of higher wages?'

The middle classes are also suffering severely from the depression, according to the Zeitung (Cologne). It advocates a return to that frugality which distinguished the Germans prior to the reign of commercialism. The Kreuz-Zeitung (Berlin) denounces the Socialists for trying to make party capital out of the general distress:

"The Social Democracy, in its efforts to use the problem of the

unemployed to further its own propaganda, is costing the idle work-people their prospect of relief. It is deliberately seeking to do this, and to this end has got up in Berlin a series of mass meetings of the unemployed. The result is a bitterness of feeling and a social hatred that may yet bear evil fruit. It may be well to recall the consequences of the rousing of the unemployed in the year 1802. The participants in the mass-meetings and demonstrations went from their halls into the streets and proceeded to the royal castle, singing revolutionary songs and uttering threatening cries, bringing about, in the end, bloody conflicts with the authorities. I'm warfs, it is true, tried to repudiate these 'walks Unter den Linden,' as having no connection with the propaganda of the Social-Democratic party, and as being set on foot by the 'liberty-cap' proleianat. Nevertheless, these things were the outcome of Socialist agitation against church and state, the putting into practise of Social Democratic campaign phrases.

The German press is visibly embarrassed by the fact that the Emperor is on the side of the agaratins and against the demands of the industrial population. The laws on the subject of the majorit make it difficult for the Socialist and free trade papers to speak their minds. However, that liberal and free-trade papers, the Addion Berlini, assu-

"The free traders are determined not to make the slightest additional concession to protection, whether of the agarain or the commercial kind. We in Germany suffer enough from protection as it is. Naturally, the weal or the wo of a great nation does not hang upon the possibly slight increase in a single tarriff any But it is important to make clear the direction in which we are going, to determine whether our tarriff and commercial policy shall be a progressive or a backward on. Never backward! That is the watchword of all friends of free trade in the present emergency."

This paper, however, notes regretfully that the outspoken freetraders in the Reichstag number only a quarter of the membership. After a survey of the different political groups on the floor of the Reichstag, it concludes:

"It might be possible to bring these diverse elements into a working majority even yet if a strong hand held the reins of imperial administration. But it is itself dominated by opposing interests. Manifestly it wants commercial treaties. But to earry out a tariff policy that will leave any possibility of concluding commercial treaties requires the very statesmashly which the administration lacks, but which distinguished Court Caprivis or preminently. Among the higher officers of the ship of state, no one at present seems to know where the commercial-political metacentrum is situated,"

There is a tendency to general recrimination in the German press, the various parties seeking to throw responsibility for the crisis upon all the others. The Deutsche Adelsblatt presses home the agrarian argument that it is the duty of industrial capital to take care of the unemployed:

"It lurad the masses from the country into the cities. It caused them to forget the agricultural love of rural life, so that they know now only how to live from boud to mouth. Therefore it should not leave the toliers out in the street because they are for a profit of only ten or twenty per cent, and the manipulators of other stock exchange have reached the end of their wisdom. It irrational to let the well-being or the misery of thousands depend upon such circumstances as these. It is downright madness to permit the state and society to be imperited by masses left haugry in this fashion. The 'social problem' is in this instead revery simple. A progressive dividend tax would soon create a flund out of which the unemployed could be maintained or at least kept from dire hunger until a new distribution of industrial forces could be effected."

This idea of a tax on dividends is "anussing" to the Hamburger Nachrichten, and has led to a warm controversy on every phase of the German crisis. The Nacutet Nachrichten (Berlin) says that if the workers would stop contributing to strike funds they would have something to fall back upon when employment failed. But the Deutsche Tages-Zeitung this's the capitalist should not be allowed to accumulate great mobs of workers in the towns and then abandon them to starvation when they have no further use for them. Hence it thinks a tax on dividends deserves consideration.

The threats of the Austro-Hungarian press that there will be reprisals if the German Reichstag puts up the duties are alarming the Berlin newspapers. The proposed new hop duties would be a serious matter to the dual monarchy. The Pester Logd (Budapest) mesits that measures be adopted to "get veen," It feels certain that the agrarians will ultimately gain their point even if their majority in the Reichstag is not yet in sight, and it urges Hungary and Austra to serve notice upon Germany of what she may expect.—Translations made for Tie Liebary Duest.

### THE BOER COLONEL IN THE BRITISH PARLIAMENT,

RISH newspaper opinion, from the Home Rule point of view, seems most adequately summed up in the following comment by The Freeman's fournat a Dublim on the election of Arthur Lynch as member of Parlament for Galway.

"Those who have never heard of Mr. Plunkett will hear that Galway, an Irish constituency, has elected to the British House of Commons a man whose chief claim upon it is that he defended Boer independence against unscripulous British aggression, From Madrid to

St. Petersburg the fact will be noted. Hitherto an effort has been made to discredit the hostility of the Irish members to the British policy in South Africa as unrepresentative. A cabinet minister declared upon that matter that the Connaught Rangers and the Dublin Fusiliers were better representatives of Irish oppnion than the Irish members of Parliament. That fiction is ended. Galway has proved to demoustration that now, as in the past, Ireland is on the side of the rights of human ity and the laws of civilization Nur will the fact be missed that the only constituency outside Dublin University and U1 ster that returned a quasi-Unionist at the general election has reverted to its allegiance at the call of the

United Irish Party.

ARTHUR LYSCH.

So much for the conversion of Ireland by souperistic Unionism. The Irish delegates in America will be learntened by Galeay's message. The old town has repaired the one breach in the Nationalist fortress that faction left behind it. Irish-America Harlish Australia will receive the news as the crowning proof that 'faction and feud' have, indeed, passed away, and that the

standard of the United Irish Party is the standard of United Ireland."

"If his [Lynch's] constituents should be deprived of the pleasure of reading his parliameutary speeches," says *The Irish Timets*, "they will doubtless find compensation in reading his letters from Paris in the local press. A vote more or less does not matter a rap." A very different way of looking at the affair is that of *The Cuited Irishman* (Publin):

"It is a long time since such an obvious triumph of ignorance occurred in Ireland as is made evident by the result of the Galway election. The Nationalists of Ireland who wish for the day of their country's regeneration, when a self-reliant people shall assert their manhood and their right and ability to live intelligent lives, have reason to be sadly disappointed, and if not absolutely to despair of the future of the country, to realize at all events that there are years and years of hard work still to be done before the average Irishman can be taught to use the brains God gave him for his guidance. But the saddest part of the business is to find the 'National' press eulogizing the people for their exhibition of incapacity to see beyond their noses-the press which claims to represent the brains of Irish politics, and which claims to lead the people to material, social, and political advancement. The Telegraph has the audacity at this period of National revival to claim the election of Mr. Lynch as a victory gained over the united forces of the Gaelic League, the industrial and literary movements, the policy of Cumann nan Gaedheal, and, of course, the Unionists,

Exasperation is the apparent feeling in English newspapers. 17he Standard (London) says:

"If Mr. Lynch claims to act as a member of Parliament, attention will, necessarily, be drawn to the credentials whish, ever presented on his behalf to the electorate; and if he does not repudiate the charge that he joined with the enemies of the star in waging war, he must be expelled from the House. In that case Galway will have practically disfranchised itself for a time does not course. Mr. Lynch may disavow the testImony of his backets, and sacrifice his reputation as a fightling pro-Boer to the exigencies of the parliamentary struggle. It is, indeed, believely some that his adventures in the Transvaal were not of a nature that should eaplowed him to the charge of blood-guiltineas, and that the smell of powder existed mainly in the atmosphere of an unusually animated election.

"The return of Mr. Lynch," says The Daily News (London), "is a tolerably striking object-lesson in what Nationalis Ireland thinks of the war." "The hostility of the Irish," says The Morning Pest (London), "is not to be disposed of by congested district boards, and land ests, and agricultural boards." "Gal-way is only acting up to its reputation," says the The St. James's Gazette (London), "The extraordinary result of the poll shows the remarkable strength and discipline of the Irish party," says The Speaker (London) adds.

"And with Mr. Lynch's return the solution of a difficult and delicate constitutional problem is thrust upon the British authorities. Mr. Lynch, according to the tendency of his conversation with journalistic friends in the French capital last night, consense plates appearing at St. Stephen's in due course, and apparently does not anticipate apprehension by the police or ejection by order of the Speaker. The problem is: Can Mr. Lynch be refused service in the House before conviction? The opinion of some legal pundits is that he can not be denied admission as the case stands to-day,"

Meanwhile the press of Paris, in which city "Colonel" Lynch still sojurns, is making a here of the gentlenun. The Istransiglant, whose sympathies are always revolutionary, is delighted with the episode, and makes it the occasion of severe demonstation of England. The Journal det Dibatt thinks the affair may end very seriously, and calls it "an alarming symptom." The Liberth has even interviewed the "exile" regarding a paragraph in The Daily Mail (London). This paragraph said, in effect:

"The Speaker has only to ask Mr. Lynch the question: 'Did

you fight in the ranks of the Boers?' If he answers 'Yes,' his election will be annulled. If he answers 'No,' his election will be robbed of all significance,"

The Libert' quotes Mr. Lynch as saying that the Speaker of the Commons will not ask anything of the sort. But if he did, the "Colonel" would say it was none of the Speaker's business. He—that is, the "Colonel"—intends to claim his seat in Parliament when that body assembles this month. So he said, at any rate, according to the Libert's, which avows great admiration for him. It Illustration (Paris) prints a photograph of Mr. Lynch crossing in a ferryboat with Theodore Roosevelt, the two being in confabilation, and calls this a "curious coming together."—Translations made for Tirk. Litrasay Diessr.

### GERMANY, VENEZUELA, AND THE UNITED STATES.

THE press of three nations has for some weeks been dealing with the German-Venezuelan complication, without, however, making the matter very clear. According to the Hamburger Nachrichten, the immediate crisis is due to Venezuela's toleration of outrages upon German subjects. But there appears to be an old debt to German financiers in connection with a projected Venezuelan railroad. It amounts to about \$9.0,00,000. The Refubblic (Caracas), a personal organ of President Castro's, repudiates this claim and says the Government will resist it to the utmost:

"Germany is misled if she imagines that a few men-of-war in the harbor will settle the clinins she makes. Venozuela constitutes a sovereign Power, independent of and equal to the other Powers in dignity. She will maintain that position. She wants peace. But she can make her enemies suffer and give tife for tat."

The same paper announces that if Germany's pecuniary claim represents a private debt it should be settled in the courts of law. But the German papers insist upon the satisfaction of awwings done to undividuals in cases having no connection with the railroad matter. One of these cases is thus stated by the Frankfurter Satisney:

"George Schleeter, proprietor of au ironware establishment and a respected member of the German colony, was shot and killed in the street, after an encounter, by one Luis Pelipe Lopez, Lopez was at once arrested. Upon learning of the occurrence, the German minister addressed a communication to the Government, asking what if yoposed to do and emphasizing the necessity of reparation. According to an official communication, the Venenuelan courts set Lopez free. Thereupon steps were taken to have the release of Lopez revoked and, in the event of refusal, to obtain damages for the denial of justice."

Another German demand against Venezuela had its origin, according to the \*Inamberger\* Asskrickhen, in a visit of the Kaiser's cruiser \*Vincta\* to Puerto Calsello. Two petty officers of the manot-war came to blows with the Venezuelan police. There as a pursuit, and the police, followed by a moh. boarded a German merchant vessel in quest of the fugitives. What happened is is not clearly stated. The Hamburg newspaper, however, as-

"If the Venezuelan police, while displaying no tokens of their authority, wishel to arrest the German petty officers, and if the Venezuelan officials, during the subsequent outbreak of the mob. proceeded unwarrantably against the officers and men of the German merchant vessel, which was in no way implicated in the previous affair, then the Venezuelan Government will have

The German Government has assured the United States Government of tis intention to respect the Monroo Dectrine, according to The Times (New York), and therefore we can await developments, giving Germany credit for good faith. The Index (New York) prints an article for which it vouches editorially, and from which it appears that some civileted government should step in and end present conditions in Caracas, for they are barbarous.—Transtition made for The IntraAss Dictars.

#### NOTABLE BOOKS OF THE DAY.

#### AN EMPTY TALE BY A POPULAR AUTHOR.

IN THE FOG. By Richard Harding Davis. Illustrated by Thomas Mitchell

Pierce and P. D. Steele. Floth, 51/2 in. by \$1/4 in., 155 pp. Price, \$1.50. R. H. Russell.

HERE are certain books that place the reviewer in the predicament of which Voitaire speaks: "The necessity of saying something, the perplexity of having nothing to say." These, he says, combined with a desire of being witty, " are three circumstances which alone are capable of making even the greatest writer ridiculous." In

RICHARD HARDING DAVIS.

the face of a book to be reviewed, the first two are so disheartening in themselves that they would onite check any vainglorious desire of the third. It is this that confronts one in Richard Harding Davis's new book. There is the necessity of saving something about it, because Mr Davis is too much in the public eye to allow a book of his to pass unnoticed. Had John Jones written "In the Fog." the reviewer could use the phrases usually employed for a story that is neither good nor bad, not very dull nor very badly written. Mr. Davis has, among other qualities, a knack of constructing a certain type of short story very well. This he has done in this case. One notices also his usual

taking style and the amusing bits of description; but after that, nothing. The story is as empty as a hollow shell. It makes no pretense, indeed, of being anything more than an amusing little tale.

The story opens in the Grill Club. Four men, strangers to each other, sit at supper. According to the customs of the club, they taile with each other, altho no one knows to whom he is speaking. A fifth member of the club sits reading by the fire. This is a member of parliament whose passion is for detective stories. He has just finished one, and the "man with the black pear!" mourns because he has not another story to throw in Sir Andrew's way, this being the only method of keeplng him from the house, where he will speak in favor of a bill for enlarging the navy. As Sir Andrew is about to leave, an honorary member, an American, begins a sensational story in which he himself was concerned, of the mysterious murder of a notorious Princess Tichy and an English lord. When he finishes Sir Andrew starts to go, but another member of the company begins to make an interesting addition to the story. Again Sir Andrew gets under way, but a third story-teller takes up the story and, by a chain of Ingenious evidence, goes on to fix the crime on the American attaché himself. The sequel we leave to the book to teil.

#### MORAL SCIENCE AS TAUGHT AT HARVARD.

THE PIELD OF ETHICS. By George Herbert Palmer. Cloth, 19mo, 213 pp. Price, \$1.10 net, postage extra. Houghton, Mifflin & Co.

"HIS is a compilation of the "William Belden Noble Lectures" for 1899, which were delivered by the author in his capacity of "Alfred Professor of Philosophy" in Harvard University. The work is important from the standpoint of pedagogy rather than of moral

science. It shows the extreme of the inductive method of instruction as practised at our leading universities, a method that is seriously proposed even for geometry, in which the "new instruction" would end with the axioms which Euclid postulates.

So Professor Palmor closes with the definitions that to students of Mill and Whately and McCosh will seem essential to the introduction of the subject. Such students may be advised to begin with Professor Palmer's final sentence and to read the book backward. This sentence, which is Professor Palmer's main proposition, is as follows:

"Those words of Jesus,—of which Phillips Brooks was so fond,—an-nouncing that he had come in order GEORGE MERBERT PALMER, that men might have life and have it abundantly, are the clearest state-

ment of the purposes of both morality and religion, of righteousness on earth and in heaven."

This confusion of the purpose of ethics with its effects is characteristic of what might be called the Matthew Arnold cult of culture. The American devotees of this cult, while centered at Harvard, are to be found in cloistered life everywhere. We are tempted to say that Professor Palmer's "field of ethics" is coterminous with the Harvard Campus, but the campus, in that case, must be taken to repreas Boston is said to represent, not a locality, but a "state of mind." It would be more proper, however, to apply the term restricted to the attitude of the teacher rather than to the scope that the subject assumes under his hand. While he treats of the relations of ethics to the physical sciences, to philosophy, history, law, esthetics, and religion, the lines of connection which he shows are so attenuated and subtle that to comment upon them in the presence of the great common bonds of practical concern is like noting the morning gossamers that gleam among telegraph wires, and ignoring the wires themseives. In such a comparative study as the present, the proper work of a teacher of ethics is not that of a poet or artist, but of a lineman, whose business it is to keep the connections from getting tangled. Professor Palmer seem purposely to have made a tangle of the subject in the first chapter, for the pleasure of straightening things out in the rest of the book. His filaments of relation are very prettily strung at the close, but we doubt if they will convey much of a current of ethical

#### O THOU INVISIBLE SPIRIT OF WINE!

THE TIPPLER'S Vow. By Lee Pairchild. Hinstrated with 26 dry-prints by Jean Paleologue, Holland. Paper edition, boards, uncut, 9 x 12 in. Price, \$10. Croscup & Sterling Co.

\*OMES reeling into the Symposium of the poets a new Alcibiades -the author of " The Tippler's Vow.

Lee Fairchild is a leader in the "Bohemia of the Table d'Hôte" of New York, where his wit and wisdom have won him all the honors which that realmean contribute. That he is something more, however, than a "prince of good fellows" is

proved by the present book, which s, Indeed, a masterpiece of its kind. In stanzas that while differing slightly in form produce the same esthetic effect as the quatrains of Omar, a victim of dipsomania is represented as addressing the "invisible spirit of wine" that has and needs no other name than " devil."

The moods in which his apostrophes are expressed are as many and as various as those which in noture possess the drunkard. But through all the stanzas, as through the justifications of a tipsy man, runs an undertone of confession where weak resolve and shameful surrender contend for mastery. So Alcibiades' "devil" of sensual

appetite and selfish ambition fought against the good "dæmon" that made the better part of his nature long for the pure life and noble aims of Socrates and his circle. And as his speech in Plato's "Symposium" seems to us the noblest sermon of Greek literature because of the vitality of his theme to-day, so will poems like this of Lee Fairof the harm value for generations to come when even the Omar fad, has he sheen the Aritime him to the chical inspiration of "The Tippler's Vow." shall have passed away.

In his illustrations of the book, Jean Paleelogue has united art and allegory, assually a most unhappy combination, in very harmonicous fashion. The letter-press is a triumph of American typegraphical art.

#### HOME-MADE LITERATURE.

THE GARDEN OF A COMMUTER'S WIFE. By the Gardener. cloth, 12000, 154 pp. Price, \$1.50. Macmillan Company.

HERE is really no reason at all why we should not make our own literature in this country. We are an adaptable people, and readily learn to imitate and even improve on the industries of other countries; why not on their books? Now there is the case of "Elizabeth and Her German Garden." That book was all very well in lts way, no doubt. The author had a very pretty trick of gossiping about nature and children. But since "The Garden of a Commuter's Wife "has been written, just like " Elizabeth " and nearly as good in every way, there is no longer any need of the earlier book. For, after all, books are a species of merchandise, and it is the duty of the patriotic to patronize home industries. In this country book-making is an evergrowing industry, and the anonymous author of the Commuter's Wife deserves much credit for having so promptly done into Americanese the work of Elizabeth. The book has been advertised as written by an American Elizabeth, and for once the advance book notes do not lie. We have the same sort of a lovely garden, and Barbara-that is the American name of the English Elizabeth-has the same fine love of early morning and bulbs, and has trouble with her gardeners. To be sure, there are some minor differences. Instead of three babies, Barbara has six dogs, and in her succeeding books-for of course she will

write more books; at least we hope so-she will be able to do a great deal in the animal study line. In place of an "April Baby's Book of deal in the animal study line. In place of an "April Baby's Book of Tunes," for instance, she might do a "Binff Dog Shook of Whines and Tunes," for instance, she might do a "Binff Dog Shook of Whines and one of the few things overhooked in the recent eruption of animal books. In character, Barbara and Brababeth differ a good feel. Elizabeth again improves on the original, for not only dues she crity them to the attention, to but the degree sould be eligible that the special properties of the p

#### ANOTHER TALE OF DERRING-DO.

COUNT HANNIBAL. A ROMANCE OF THE COURT OF FRANCE. By Stapley Weyman, Cloth, 7% x 5% in., 404 pp. Price, \$1.50 Longmans, Green 4 Co.

VERY novelist, except the greatest, has his formula. He may ring changes on it, but in essence each of the minor novellsts has his one and only plot. This is more than usually true of Mr.

Stanley Weyman, who had the daring to begin his career as novehst with two excellent pieces of work. "A Gentleman of France" and "Under the Red Robe." both fundamentally identical in plot. Mr. Weyman's formula is how a middle-aged man of no particularly good reputation manages to win the affections of the heroine by true deeds of derring-do. The present example of his art in large measure repeats his original formula

Count Hannibal is the middle-aged hero, -shall we call him !-- who at first is presented to us in exactly the same terms as the villain of the old melodrama. If we did not know Mr. Weyman, we should feel sure the Count's plots were destined to frus-

STANIEV WEYMAN

The situation in the present instance is a little more complitration. The situation in the present instance is a little more compil-cated than value. The theroise sengaged to be married, and what is cated than value. The theroise sengaged to be married, and what is plot consists in showing how Count Hamilaal de Tavannies shows inself polder than M. de Tigomoville, and thus wins the affection of himself polder than M. de Tigomoville, and thus wins the affection of loses somewhat of our respect in caring for such a cur as 10e Tigomoville. Still, on the whole M. Weyman makes but terpiverasions as one of his most successful productions. It must be confessed, however that it smacks of formula, and searcely strikes one as having obsessed

#### A BUNDLE OF LOVABLE ABSURDITIES.

EUGENE FIELD: A STUDY IN HEREDITY AND CONTRADUCTIONS. By Slason Thompson. 2 vols., cloth, 19400, 346 pp. With portraits, views, and facsimile Illustrations. Price, \$3. Charles Scribner's Sons

GREAT deal of a reader's interest in this book will depend upon his estimate of Eugene Field. It he be among the great number of people who love Field and esteem him one who, for the originality and perennial charm of his work, merits a high place in the literature of this country, this biography will have an absorbing interest. many portraits and facsimiles of

SLASON THOMPSON.

poems, letters, and drawings alone make it a piece of Fieldiana that lovers of Field will not wish to pass by. If, on the other hand, the reader looks on Field as a very much overrated man who made a big splash in the literary puddle, he may very well look on Mr. Slason Thompson as one of those biographers of whom Mr. Andrew Lang speaks, who use such a profusion of pointless letters and banal details that what little is worth recording is choked. But this is true only in part; for

two reasons the book should be of interest to any one, whatever view of Field he may take. One is the insight it gives into newspaper life in the West during the seventies and

eighties, and the other the charming spirit in which the book is written. It is as a study of a character and not as the record of a life that Mr. Thompson wishes his book to be considered-the study of a character that was a bundle of contradictions and lovable absurdities, at once the despair and delight of all who knew him. It is a very definite impres-sion of the author of "Little Boy Blue" that one gets in reading, although Mr. Thompson's methods are sometimes slow and cumbrous in giving this impression. The character of Engene Field is brought out by piling on detail after detail, instance after instance, often of the same kind. The reader sees this colossal farceur playing his jokes over and over again; the impecunious knight sans peur et sans monnaie, borrowing again and again; the charming friend and jovial companion, time after time, entertaining his friends. It seems as though some of these details might have been spared, some of the many instances omitted, and the portrait of Eugene Field suffer not one whit, for life is crowded and books arc many, and the reading world has grown impa-tient of what is unnecessary. The excuse of this prolixity of detail is, that Mr. Thompson was carried away by his subject. He who had seen Field's intellectual development from a brilliant paragrapher with little knowledge of books to a bibliophile and writer of lovable verse, deemed every step on the way to this development important, every detail significant. Sincerity is Mr. Thompson's only aid in writing this, in some ways remarkable, interpretation of his friend's character. There are no lightning flashes of insight, no illuminative touches to bring Field before the reader's mind; but a careful accumulation of evidence presented with all the literal truthfulness that a devoted friend and bonest man was canable of. was capable of.

This method does very well in describing Field himself, but is a notable failure in the description of his jokes and pranks.

#### HISTORICAL EVIDENCES OF CHRISTIANITY.

THE DIVINE ORIGIN OF CURISTIANITY, INDICATED BY ITS HISTORICAL RESULTS. By Richard S. Shorrs, D.D., LL.D. Ten lectures delivered before the Union Theological Seminary, New York, and the Lowell In-stitute, Boston. Cloth, 9 x 6 in., 6/x pp. The Pilgrim Press, Boston and t'hicago

HE ground covered by this book is so large that one might expect a very generalized treatment of the subject-matter. The genius of Dr. Storrs shines brightest in the discussion of these wide themes. The ability to break them into facets, points, angles, by means of sentences cast into the form of metaphor, and paragraphs comprising brilliant images, and luminous illustrations, has effected results that arc in fact both clear and concrete. After eliminating such proofs of a divine origin for Christianity as are furnished by miracles, prophecy, criticism of the New Testament, and personal experionces, the author narrows his field down to a few of the more obvious historical effects in which he sees implicated the evidence that Christianity has exhibited results not attributable to ordinary human energy, and that must therefore be accounted divine. Among these effects are the changes wrought by Christianity In man's conceptions of the personality, unity, sovereignty, and fatherhood of God; of the value of man, bis greatness, intellect, conscience, affections, freedom, and immortality; the changed ideas of worship, especially the aboli-

tion of external sacrifices; the outbreak and growth of the song spirit, including the development of bymns. and the building up of the credal liturgies; the revolution wrought in certain social and political conditions, as the treatment of children, women, and slaves, and the manner of regarding the poor; the improvement in international relations, as seen in the higher standards of fidelity to pledges, in the growth of peaceful arbitration, and in the increased humaneness of war; and the quickening of the mental and moral life of mankind, and the energetic hopes of future progress. The lectures conclude with a recapitulatory review, and are supplemented by nearly, three hundred pages of notes, and a full

RICHARD S. STORES.

index It is doubtful if this work will ever have the same effect upon the critical reader that it must have had upon the students of the Union Theo logical seminary when reenforced by the mellow and resonant oratory of Dr. Storrs. Except for a small contingent of unversed students, the notes have no considerable value in connection with the lectures. It is not required that such considerations as those offered in this book should be supported by authorities. The discussions are mostly useful as suggesting fields of evidence that, in a more detailed study, might be worked out to profit; but in themselves the arguments me far too generalized to have evidential value to the student of the profit of book should be supported by authorities. The discussions are mostly

## 10 SECURES \$480 LOT in Greater New York

Opportunity to Make Money Same Way Astors Did—Greatest Offer Ever Known in New York—Will Double in Value Upon Completion of New Bridge—Guaranteed to Increase in Value 20 Per Cent. Within One Year—Land is in New York City with City improvements-Only 35 Minutes from New York City Hall-Free Trip to New York and Return.

VERY one knows that more money has been made by the increase in value of real estate in New York City than anywhere else in America. Many of the wealthiest families have made milns simply by the natural increase in ten, twenty or

thirty years.

Manhattan Island is very much crowded, but with the circle was enlarged recently the opportunities were extended, and now there is just as good an opportunity to repeat what has been done in past years, in Greater New York; especially now that the great rivers are being bridged and tunneled-bringing Brooklyn and Kings County as close to New York City Hall as the most valuable sections of Manhattan Island.

most valuablesections of Manhattan Island; New York City property has leveraged in vice more than that Many Country of the Country of the Country of the Country of the and the growth of valuas and population is still pour or. Tities are guarenteed to us by the Title Guarantee & Trust Co., of New York City

#### LISTEN TO OUR STORY

It is our business to study conditions existing or mospible in the various cities of the United States, and we have eided in the development of as different cities. After to years' careful study in New York without purchasing, in 1898 we naw the trend ol effairs, and before the consolidation of New York and Brooklyn we bought over 1500 acres of the cholcost land in Brooklyn, and which is now in the heart of that borough. This land is only 3% miles from Brooklyn Bridge and is only 35 minutes from New York City Hall. We have over \$4,000,000 invested in this land and are making it one of the most beautiful spots of New York. The growth of the city, together with our improvements, have increased the value of the property over 25 per cent. since m year ago, and we feel so oure that the increase will continue that we think there is no risk in guaranteeiog z 20 per cent. increase for the next

#### CURRENT POETRY. Winter Trees.

By KATHARINE TYNAN. Across the sky, across the snow, The sober rooks are winging slow, Gray roses in the rush-fringed pool, And Winter trees are beautiful. The West is now a garden-close, Pink roses and a golden tose, With amber and with tender green, To let the throbbing stars between Against that world of roses stand-These are the woods of Fairyland-Poplar and oak and elm to make A gold brake and a rusy brake. Instead of silky leaves of Spring, The stars now make their garnishing For May roses and April white; The annw has lit them all the night The red sun hangs his lantern rad Hetween the black boughs overhead, The evening cluthes them with his mist Half sapphire and half amethyst.

This is usually the most difficult problem to purents. ers, professional men, and others to whom you men come for advice. Each and every one has this question to solve from time to time and is often at a loss what to do It is a rule that "he who helps another to help himself helps blus best." We are in a position to answer this problem in this way. We would be pleased to correspond with parents and others and acquaint them with our plan to help a young man to help himself. Through the generosity of the lounders of the school, and several prominent manufacturers, the Trusteen are able to offer each year a lew Free Scholarships in a Engine-ring courses to deserving, energetic and intelli-

eent young men The scholarships for sque are now available and applications will be considered from the readers of THE LIVERARY DIGEST. The course of study offers thorough LITERARY DIGASY. The course of study offers thortough instruction in home in Mechanical, Electrical, Stationary. Locomotive, Marine, and Textile Engineering, as well as Heating, Vertilation, Plumbing, and Mechanical Drawing under instructors who are graduates of the great technical schools. Much of the instruction is under regular teachers in technical school for which Boston is lamous. Write to the registrar of the American School of Correspondence, Boston, Mass., for full information, large handbook describing courses, methods, etc.

The dawn roses are scattered bete As Tweeze a rose espaller Whose happy boughs have borne for fruit

Red roses all from head to foot Even the lamn that men have set To light the way for traveling feet

Caught in the dark tree glitters bright As chrysoprase and chrysolite. Down the long road's perspective go The dark trees in a double row. Spangled with lamplight gold and cool,

And Winter trees are beautiful. -The London Speciator.

#### The City of Light.

The Pan-American Exposition By RICHARD WATSON GILDER

[The following poem contains two lines which

have an interest attached to them apart from the norm as a whole. It will be remembered that in the course of President McKinley's last speech. delivered on the day before he was shot, he quoted two lines of poetry whose authorship, at the time. puzzled many newspapers :

"These buildings," said the President, "will disappear: this creation of art, beauty, and industry will periah from sight; but their influence will remain to

Make it live beyond its too short living With praises and thanksgiving

The St. Louis Globe calls attention to the fact that Mr. Gilder's poem clears all doubt as to the lines and the poet.

What shall we name it

As is our bounden duty

This new, swilt-builded fairy city of Beauty-What name that shall not shame it, Shall make it live beyond its too short living With praises and thanksgiving?

Its name-bow shall we doubt it-We who have seen, when the blue darkness falls, Leap into lines of light its domes, and spires and walls.

Pylons, and columnsdes, and towers, All garlanded with starry flowers! Its name-what heart that did not shout it When, from afar, flamed sudden against the night The City of Light?

-Prom "Poems and Inscriptions."

#### The Subalterns.

BY THOMAS HARDY.

"Poor wanderer," said the leaden sky, "I fain would lighten thee, But there be lows in force on high Which say it must not be."

"I would not freeze that, shorn one," cried The North, "knew I but how To warm my breath, to slack my stride :

But I am ruled as thou. To-morrow I attach thee, wight." Said Stekness. "Vet 1 swent

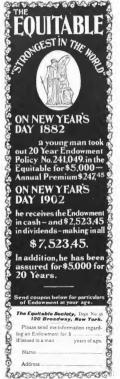

I bear thy little ark no spite, But am hid enter there

"Come hither, Son," I heard Death say ; "I did not will a grave Should end thy pilgrimage to-day.

But I, too, am a slave!" We smiled upon each other then, And life to me were less That fell contour it wore ere when

#### PERSONALS.

eccutricity of many writers, composers and artists has angrested to Dr. Reguault, of France, a very interesting article on the "Manie of Authors" published in the Revue Currentelle. By "manus" Dr. Regnault does not mean insanity, but an ungovernable desira to do certain loolish things when accomplishing their work as authors. He

"For strong men like Victor Hugo, Mistral, Ampère, Catulle Mendès, walking is often sufficient to stimulate the production of ideas which they can jot on paper while passing near their desks. Weak men like Descartes and Leibnitz, on the contrary, can produce only when they lie down. Cujas wrote lying on his stomach : Ressini found inspiration only in his bed; So did Ambroise Thomas, but not so regularly,

Chateaubriand, while dictating to his secretary. was in the habit of walking in his bare feet; Schiller and Gretry could not write unless their feet were on ice; Glück had his piano brought into the sun in the open air; Hossnet covered his head with bot cloths. The shirt-frills and ruffles of Baffon have demonstrated to as long since how great is the influence of the costume upon the writer.

To emphasize his idea concerning this influence of costume. Dr. Regnault gives a list of persons addicted to eccentric dress who were well known for their literary achievements :

"A monk's bood was necessary to Balzac Théophile Gantier had to wear a red gown and Milton a woolen cloak. Mendés only writes in his shirt-sleaves . Victorian Sandon would not think of bandling a pen if he had not previously put his black silk skull-cap on his head ; Without his scarlet vest, François Coppés could write nothing, not aven the Pater."

There is also, according to the writer, a close relation between the senses of taste and smell, and the laculty of thought :

"Lord Perby always filled his mouth with braudy-cherries; Penimore Cooper used to chew gum-drons: Byron filled his nockets with trnffles: Théophile Gautier burned mcense; Pierre Loti gets 'intoxicated with perfumes."

Other varieties of mania are as follows . Zoin needs only light; he writes, even in daytime (in which case his blinds are closed; surrounded with numerous lighted candles. For Cimarosa, Verlaine, and John Stuart Mill nothing but noise would do to stimulate their brains. Those who require absolute silence are, however, more numerous. Carolus Duran never begins to paint until he has played the violin; Morot plays the organ : Darwin always practised on his old fiddle before writing. Finally the author mentions a composer who can not arouse musical inspiration without walking in his bare feet on broken glass He often fills his shoes with broken glass and then walks for hours until he is ready to write his compositions. "When they have come to that." cently comments Dr. Blanche, the insanity evpart "it is better not to disputes with them Translation made for THE LILEBARY DIGEST.

Readers of THE LITERARY DIGEST are asked

# Heart Disease

Ninety Per Cent of it Really Caused From Poor Digestion.

Real organic heart trouble is incurable, but scarcely one case in a hundred is organic.

The action of the beart and stomach are both controlled by the same great nerves, the sympathetic and pneumogastric, and when the stomach falls to

properly digest the food and it lies in the stomach fermeeting, gases are formed which distend the organ causing pressure on the heart and lungs causing palpitation, irregularity and shortness of breath.

The danger from this condition is that the continued disturbance of the heart sconer or later may cause real organic heart trouble and in fact frequently does so.

Furthermore, poor digestion makes the blood thin and watery and deficient to red corpuscles, and this further irritates and weakens the heart. The most sensible thing to do for heart trouble is

to leaure the digestion and assimilation of the food. Th's cao be done by the regular use after meals of me safe, pleasant and effective digestive preparation, like Stuart's Dyspepsia Tablets which may be found at most drug stores and which contain the peressary digestive elements in a pleasant, convenient

Thousands of people keep well and vigorous by keeping their digestion perfect by observing the rule of taking one or two of these tablets after each meal, or at least after each hearty meal.

Stuart's Dyspensia Tablets contain U. S. P. pensin. diastase from mait and other natural digestives which act only on the ford, digesting it perfectly and preventing acidity, gases, and the many diseased conditions which accompany a weak stomach.

When Stuart's Dyspepsia Tablets are used you may know you are not taking into the system any strong medicine or powerful drug but simply the natural digestive elements which every weak stomach lacks, So widely know and popular have these tablets

become that they are now sold by every druggist in the United States, Canada'and Great Britain.

Pawn and prevent the reply of Black's P-Q 4-White baving the intention of early advancing bis KBP. Black bas, on bis second move, three good defenses, viz.: B-B 4, Kt-K B 3, and Kt-Q B 3, and Mr. Teichman dealt with the variations arising from the first two defenses. One of the most interesting illustrations he gave was that after the croves 1 P-K 4, P-K 45 # Kt-Q B 3, B-B 4; 3 P-K B 4. P-Q 3; 4 Kt-B 3, Kt-K B 3; 5 B-B 4. Kt. B3; 6 P-Q3, B-K Kt5; 7P-K R3, Bx Kt; 8QxB, Kt-Q5; 6Q-Kt3, if Black continue with 9. Kt x P ch; so K-Q sq, Kt x R, White will obtain an irresistible attack by to Q x Kt P, etc. Mr. Teichman concluded by showing what is perhaps the strongest line of play that White may have in this opening, viz : t P-K 4, P-K 4; 2 Kt-Q B 3, Kt-K B 3; 3 B-B 4, Kt-B 3; 4 P-Q 3, B-B4; 5 P-K B4, P-Q 3; 6 P-B 5!- The Baltimore American.

#### TOPICS OF THE DAY.

#### AMERICAN FEELING TOWARD GERMANY.

T has often been remarked that wars are caused, not so much by the immediate incidents that precipitate them, as by the state of mind of the two peoples involved. Hugo Münsterberg, a German who is professor of psychology in Harvard University, said in a magazine article a couple of years ago: "If Americans and Germans like each other, the whole of China will be too small to cause a conflict; but if there is antipathy between them, the tiniest rock in the ocean may suffice to bring on a war which shall set the globe ablaze." The attitude of our people toward Germany was tested in a degree last May by Senator Lodge in his speech at the opening of the Pan-American Exposition, in which he assumed a rather belligerent tone toward an unnamed nation which was generally understood to be that of the Kaiser ; and it was recorded in these columns at that time that the great majority of the newspapers deprecated the Senator's tone and expressed only the most friendly feeling for the German people and their Government.

Another opportunity is now afforded by Germany's reported intention to obtain satisfaction from Veneruela for certain alleged damages and indignities to her subjects, mentioned in our department of Foreign Topics last week, and for a debt of several million dollars in connection with a railroad enterprise, explained in the paragraphs at the end of this article. It is said that the German Government has assured our Department of State that it has no intention of violating the Monroe Doctrine by occupying permanently any portion of Veneuelan soil, and it is reported that the Emperor has given a further proof of his good will by asking Miss Alice Roosevelt, daughter of the President, to christen his new yacht, which is now being built on Shooter's Island, 'near New York City.'

Most of the American press have nothing but the most friendly words for Germany; but not all. The Washington Peri declares that "Germany will launch herself in stormy waters when she undertakes to seize the Venezuelan custom-houses and collect from the world's commerce with that republic a debt which Venezuela herself does not acknowledge and for the integrity of which we have no final voucher"; and it adde that "the real question is whether European Powers can send fleets and armies to the western hemisphere to collect debts claimed—houselfy or

dishonestly—by their subjects. Perhaps they can, but we take the liberty of persisting in the conviction that the experiment is fraught with peril." The Memphis Commercial Appleal, too, thinks that Germany's hostile demonstration toward Venezuela "can hardly be viewed with equanimity by the people of this country," and says

"Suppose Germany should seize the customs-house at La Guayra, and Castro should proclaim free trade, what will be the outcome? Will we find Germany levying a tariff on the imports of Venenuela? To allow a European power to promulgate a tariff for a South American country would be an unheard-of proposition. From whatever standpoint we look at it, the situation is both delicate and critical. Germany has at least taken to most unfortunate and sinister time to assert her claim by force of arms. If Venezuela were enjoying internal peace, the ing with grave distract the German interposition in Venezuela when that country is sectiling with discord. We can not help thinking that there is an ulterior purpose behind the German program in South America. At any rate American diplomacy would do well to keep its eyes wide open."

The Brooklyn Eag/e, however, denounces "the attempt made by certain alleged newspapers to create a belief that war is imminent between the United States and Germany over the latter's justifiable effort to protect the interests of her eitizens" as "almost too contemptible to merit attention"; and adds that "the Monroe Doctrine is not an egis for thieves, even tho they masquerade in the guise of volcanic republics." The Chicago Evening Post, too, thinks that "it seems absurd even to consider the possibility of war with Germany"; and the New York Tribune believes that "there is practically no possibility" of such a thing. "It is within the knowledge of this newspaper," says the New York Times, "that the relations between Ger many and the United States are wholly amicable, and that the belief in their continuance is based upon reasons of unusual validity." The New Orleans Picarune thinks "there is no good reason for suspecting Germany of acting in the present instance with any ulterior motive," and the Detroit Free Press brands the "reckless insinuations" to the contrary as "criminal nonsense." Similar opinions are expressed by the Indianapolis News, the Boston Journal, the New York Sun, the Philadelphia Inquirer, the Columbia State, the Atlanta Journal, the Cleveland Plain Dealer, and many other papers. These papers hold that while this country is bound to maintain the Monroe Doctrine, that doctrine ought not to be allowed to shield the South American republics from bill collectors. The Pittsburg Times

"A mistaken notion has grown up that the Monroe Doctrine is a condition laid down by this Government for the protection of other American governments than our own. The truth is that self-defense and nothing else is the motive of the Monroe Doctrine, and if Venezuela owes Germany a just debt there is no reason in the world why it should not be collected. Should Germany attempt to obtain lodgment on the sail of the New World, intent of the measure is to keep European countries from gaining an advantage of that kind on this side of the ocean. What Germany does to Venezuela from the decks of German batteships is no concern of the United States, except so far as property of American citizens is jeoporalized."

It would be a fine thing for England, thinks the Springfield

Republican, if Germany and the United States should go to war. It says:

"If England, Germany, and the United States are now and are to remain the three great commercial Powers of the coning generation, then it is clear that of the three those two will receive the severest check which allow themselves to be drawn into war, while that one will profit most by war which remains at peace. Nothing could profit Bugland more than to have Germany and the United States at war. Under the circumstances, the most cold-blooded and calculating statesmaship dicates that the United States keep its hand on the phowshare and not upon the sword. Let the two Powers that face each other across the German ocean come to blows, if they will; our business is peace."

The story of the German railroad claim in Venezuela is told as follows in the Pittsburg Post:

"The trouble grows out of the financing of a railroad by German capitalists and built by German contractors, not the Government, from Caracas to Valencic, a distance of 110 miles. It became a most expensive bit of railroad construction and financiering. The debt is admitted, and altho the country was plundered, it was under the forms of law, and Venezuela will have to pay. The road cost \$145,000 a mile, figuring up nearly \$16,-000,000. It was then managed at a cost of \$6,500 a mile, or \$700,000 per annum, and Venezuela was called on to pay the bond interest, as all the receipts had been absorbed. The German financiers were two banks under a concession by which the Venezuelan Government guaranteed 7 per cent. interest. In 1895 these banks loaned Venezuela \$10,000,000. It is alleged that the banks by various hocus-pocus processes got this loan, and Venezuela merely the shell of the oyster. The actual cost of the road fell far below the obligations incurred.

'There appears to be no doubt that Venezuela was 'done up' in a debt of many millions, but under the manipulation of acute financiers in a legal way. The equities of the German claims are preposterous. But the robberies were under the forms of When the whole matter comes to be looked into by impartial judges, the war menace of Germany appears to be nothing less than an effort to collect a big sum, partially fraudulent, at the cannon's mouth. Out of this, if Germany persists in her hostile purposes against the South American state, it is easy to see complications may arise in the United States. Venezuela has not the good opinion of the world, but when it comes to landing German troops on American soil to enforce a fraudulent claim, it will be very apt to arouse an intense feeling in this country. Germany is proceeding very cautiously, and with the evident purpose to avoid friction with the United States, but there is no telling what may happen when the South American side of the financial and war conflict impresses itself on the American people. We are naturally sensitive as to European force applied to American states. That is the basis of the Monroe Destrine."

# WILL A REVOLT FOLLOW THE CUBAN

PPREHENSION is felt by a number of American papers that the refusal of General Maso and his party to take part in the Cuban election on Tuesday of last week will be followed by an attempt to reverse the result of it by force of arms. The Masoists were the anti-American party, and withdrew from the campaign upon the ground that the American authorities in Cuba were using their influence for the election of Palma. A more potent reason, it is believed, was the probability that Maso had no chance of success anyway; but a reading of the Cuban papers seems to show that there was some basis for the Maso charge. General Wood and the other Americans in Cuba do not appear to have interfered at all in favor of either candidate, but the Cuban office-holders, according to La Lucka, a paper that has been pretty favorable to United States interests, used their influence and money very freely, and without rebuke from head. quarters, to advance Palma's campaign. The Masoists also charged that the entire board of scrutiny, which had charge of the elections, was composed of Palma partizans, and that the authorities refused to allow the Maso party a representation on the board. An extremely small vote was cast, and many papers think this indicates trouble ahead.

"Only the strongest administration," remarks the Pittsburg Dispatch, "can succeed in establishing a popular government in the face of such conditions as the deliberate non-participation of a large proportion of the voters, who thereby seek to reserve the right to make trouble for the elected officers upon any and all occasions," and it thinks that "unless Maso's strength is greatly overestimated President-to-be Palma will have a difficult if not impossible task." It seems to the Philadelphia Inquirer, too, that the Masoists may very likely express their sentiments later in "the shape of disorderly violence." "That is the regular South American practise," it says, "and it will be no more gratifying than surprising should the Cubans fail to follow it." Maso's action, thinks the Baltimore Herald, "resembles the sullen declaration of the small boy who will not play unless he can be captain," and it considers the action a "sign of extreme political weakness," and one that "follows closely along the prec-

HE MAY SITP ON BOMEBODY'S TORS.

edents set by our other Southern neighbors, in that the opposition party is always the revolutionary party and the hustings are hedges, and the most telling arguments consist of rifle-fring." The Richmond Dippth, to, to, regards it as "by no means certain that the election of Palma will be gracefully acquiesced in throughout the island," and the Hartford Courant says:

"We wish Estrada Palnia a more tranquil and happier administration than we can at present hope for him. The real test of his executive ability.

and of the capacity of the Cubans for orderly self-government under a written constitution, will not come until the withdrawal of the American troops from the island. There are indications that it will be a severe test when it comes, The malcontent ex-generals, professional agitators, and officehungry demagogs are likely to make all the trouble for him they can, It is a hard fate that drags him, at his time of life, from that peaceful home in the shadow of the Ramapo hills to the palace in Havana.

Turning to the Cuban papers, a sharp division of opinion is apparent, altho none of them goes so far as to advocate or predict a resort to arms. El Comercio (Havana) says that in all the island "there is not a place but feels and thinks with

teels and thinks with Maso," but that "the Cuban sentiment has been grievously wounded by the frozen winds from the North," and it adds: "The republic of Cuba will be founded. Certainly; but it will be similar to any ayuntamiento constituted through the pressure of the boss of the town, but not with the will and cooperation of the people themselves," La Lu, ka, da Hayanah save.

"It is a painful spectacle and causes profound regret that by fraudulent and overview measures certum high Cubun officials should cheat the wishes of the majority of the voters of the country by strangling the chances of their candidate, General Maso. These people do not understand that if by such devices and contemptible deception they succeed in defeating the candiulate of the majority they are preparing a stormy time for Cubaand that the republic, born branded with fraud, coercion, and violence, would be an unstable régime, without bearings, and uncertain and short-lived."

The Chion Expanded (Havann) says that the election shows how things are going. Americanism has invaled the social body, and all seems to conspire that Cuba shall "fall to the depths indicated by the Monroe Doctrine." The Expublica Cubana (Havana) terms the election day "one of shanne for the Cubana." The Masoists, it says, are "the last of the Cubans." And it declares that they will keep up the fight, altho it has doubts of their success. The Fetrar (Havana), however, calls

the election "an immense victory for the people," and says that if the Masonists had gone to the polls, it would have made no difference in the result. The Disassion (Havana) thinks, too, that the great majority of the Cuban people favor Palma, and it attributes the small vote and lack of enthusiasm to the certainty of his election. It foresees difficulties for the new government, however.

As in this country, the votes were cast for Presidential elec-

TOMAS ESTRADA PALMA. To be President of Cuba.

tors not for the candidates themselves. Fifty-five Palma electors were chosen and eight Maso electors. In addition there were chosen governors and conncils for the six provinces, the members of the lower house of Cougress, and the electors in each province who will toutly with the provincial councils, choose four national senators for each of the provinces. The elec toral college casts its ballots February 21 The term of the President, Vice-President, and representatives is four years. and that of the senators eight.

Señor Palma says in a newspaper in-

"The principal object of the Cuban republic should be, first of all, to secure the most friendly relations with the Amer.

ican people, who helped us in our hour of need. We will always bear in mind the work of the United States in helping us to obtain our independence from Spanish rule. At the same time, we should try to secure from the Washington Government all the advantages possible for our products by reasonable reductions of the import duties, especially on sugar and tobacco, as this is the only way for Cuba to escape the absolute ruin of these two industries, which are the bases of Cuba's actual wealth. Without this benefit the Cuban people will find themselves in great distress and subject to disturbances from lack of employment, Without this benefit all the sacrifices of the Cubans for their freedom will be set at naught, for in a starving condition they can not enjoy their independence. I am convinced that the people of the United States know very well that it is to their own interests that Cuba be in a prosperous condition and in a state of order and peace, and for that reason I am sure that a majority of the Americans will favor a commercial treaty between the countries advantageous both to the United States and Cuba."

The President-elect is characterized as follows by the Philadelphia Ledger:

"The new President of Cuba is 65 years old. He is a native of Bayanio, Cuba, and is a lawyer and planier. During the prising of 1808 he was a member of the Revolutionary Congress, and was elected President in 1875. Subsequently he was detained in Spanish castles. He vasited the United States for a buffer period, and then went to Honduras, where he became post-

master-general. Returning to this country in 1882, he established an justitute at Ceatral Valley, Orange County, N. Y. Spain offered to restore his estates to him if he would swear allegiance, but he refused to take the oath. Upon the death of Jose Marti, Palma was elected by the Cuban revolutionary clubs as the head of the Cuban movement outside the island. While the Spanish war progressed he was the leading spirit of the Cuban lunta. The prospective President owes his success partly to General Maximo Gomez, who declined to be a candidate himself, after finding that much opposition was manifested to him because he was born in Santo Domingo, Gomez visited Palma in this country last July, and persuaded him to permit the use of his name in connection with the Presidency. The business and industrial classes were favorable to Palma, and the influence of Gomez among the men who had borne arms brought most of them iuto line for Palma. . . . . .

"The election of such a man as President will be conducive to friendly relations between the United States and Cula, Palma's residence in this country, his familiarity with American politics, and his appreciation of the real sentiments of the Amerscan people toward Culia, qualify him to make an irrelligent and sagecious executive. He is neither swashincker nor alventurer, but a man of affairs, learned in the law, and one whose inclinations are for peace. The negotiations with this country part of Culia, Lact and discretion, and Unima is particularly sited to be the modesman for his native land."

# RESENTMENT IN THE ARMY OVER THE CENSURE OF GENERAL MILES.

THE military journals seem to be more deeply stirred than the daily press by the President's rebuke of General Miles (discussed in our issue for December 28) for the latter's discussion of the Schley vertict. It appears that the Lientemmt-General was not only rebuked by the letter from Secretary Root, but was publicly criticized by the President before a rounful of visitors in the White House. According to the Washington correspondents, the President indicated that General Miles should step into an adjoining room, but the General suspected that he was being "invited to the weedshelf," and mude no nove in that

A RETURNED CHRISTMAS PRESENT.

UNCLE SAM: "Say, Sania, can't you lose that down some beathen's

direction, whereupon the President administered his rebuke publicly. The Army and Navy Journal (New York) says it "greatly regress" to learn of the White House incident, and declares that the army regulations "forbid such a showing of disrespect toward even a non-commissioned officer by his superior in rank." It goes on to say:

" It is certain that military men have been left free to express

at least their complimentary opinions of others, even to the extent of publishing resolutions of approval and the presentation of various unigible tokens of esteem. If a different rale is to prevail in the future, and a more sever penalty is to be imposed than the one apparently inended, it would seem that some more appropriate method might be found for making the fact known than by the open rebuke through the public press, by a civillad

Secretary, of an officer of long and distinguished services who, by virtue of his position, represents the honor and dignity of the military service.

"By Article 898 of Regulations, punishment for light offenses is limited to the censure of the commanding officer. and a reprimand. such as has been administered to the Lieutenant - General, can only be administered on the verdict of a court-marrial, as it is a distinct and well-defined punish meat for specially

THE MAN BEHIND THE GUN,
"I guess I'm about the only Hero left."

— Harper's Weekly.

named offenses. Even a non-commissioned officer is under the protection of Article 236, which dreves officers to be cautious reproving him in the presence or hearing of private soldiers. Is it and incumbent that at least equal consideration should shown to the officer commanding in the presence of his military lateriors?

"There is a general misunderstanding by men not trained to the military service, and familiar with its system of checks and balances, as to the extent and limitation of the seemingly arisery authority of a military commander. They appear to everlook the fact that courtesy and consideration for others are the foundations of military discipline equally with justice, and that these are binding upon the highest as well as upon the lowest. That there may be no misunderstanding as to this, in the very forefront of the Regulations (Articles 2-4) these principles are declared:

"Military authority will be exercised with firmness and justice. Punishment must conform to law, and superiors are forbidden to lajure those under their authority by tyraanical or capricious conduct, or by abusive language. Courtesy among military men is indispensable to discipline."

"The smart of a public rebuke is very severe in the case of a publisher man, and the bestowal of it should be reserved as a punishment for some flagrant offeuse duly determined by the verdict of a court-martial. Experience may thicken the hides of men who, is order to obtain promotion through the suffrage, are obliged to run the garntet of unlimited criticism and abuse, but God forbid that this should ever be true of military men, or that te time should ever come when they were not ready to say:

Better to die ten thousand deaths, Than wound my honor.'"

#### The Army and Navy Register (Washington) says:

"The incident of the week in service circles has been the re-buke of Lieutenat-General Miles, the text of the correspondence being published elsewhere in this issue. The event has created much comment, the consensate of opinion being decidedly in favor of General Miles, even among those who do not share that officer's view of the Schley case, the subject to which General Miles referred in the public interview. The impression prevails that the tone of the Kool letter is unnecessarily severe, all out of present the control of t

opinion on the matter entertained by the majority of the peo-

"However much people may differ in opinion on the justice or necessity of a fierce rebuke of Milos and its publication in semi-official form, there can be no doubt on that other incident, said to have occurred at the White House, where General Miles are personally criticized by the President in the presence of other visitors. If this is so, General Miles's friends may very well find their patience exhausted. As for Miles, he is not likely to appear again in the matter; his advisers are counseling slience, an attitude which is the most discrete, regardless of the procession of the p

#### SYNDICATES WITHIN SYNDICATES.

NE feature of the "trust" movement that has received comparatively little notice from the press thus far is called to our attention in connection with an article entitled "A Glimpse of the Steel Trust's Profits" in our issue for December 7. In that article several paragraphs were quoted from the New York Journal of Commerce to the effect that checks aggregating \$25 .-000,000 had been sent "to members of the underwriting syndicate of the United States Steel Corporation," and that "the profits of the syndicate are largely in excess" of this amount, and that "these profits may equal or exceed 30 per cent., or \$60,000,000," A reader who says that he owns common and preferred stock in the great steel concern directs attention to the fact that the distribution referred to above was not made by the United States Steel Corporation to its shareholders, but was paid by "the syndicate which subscribed \$200,000,000 to protect the stock of the United States Steel Corporation on the stock exchange," and that these profits were "realized by the syndicate in its Wall Street transactions." As to the relation of this syndicate to the larger corporation he writes:

"I understand that in the case of most, if not all, large corporations formed in the present rea, inside syndicates, in the nature of a 'wheel within a wheel,' are organized for steering purposes. These organizations do excellent service in protecting the stock of the corporation on the market, and in that way serve the interests of the public who subscribe to the stock, especially those who invest when the corporation is first formed. ... During financial distribunces the bears in Wall Street operate to reduce the prices of securities. My interests are served by the syndicate stock on the street, the bears can not make an effective raid thereon. This serves to maintain the price of my investment, and to this extent even those investors who did not purchase

stock until after the syndicate had been formed receive a benefit from the protective influences of that inside circle."

In contrast with this favorable picture of the inner circles that protect the shareholders of the great "trusts," comes an account of an inside circle of magnates of the copper trust which credits them with a purpose not so benevolent. The United States Investor (Boston) says that the present depressed situation in copper "is, in our opinion, the result of a deep-settled conspiracy on the part of a handful of morally irresponsible financial adventurers to levy blackmail on the whole financial and industrial world," and it declares its belief that "the two reductions in the Amalgamated dividend rate, and the several cuts in the price of metal, were all effected with mulice prepense, as part of a deliberate and diabolical plan to effect the ruin of a large number of persons in order to advance the interests of a few innovators in the copper industry." The "inner circle" in this case. according to The Investor, formed itself into a corporation known as "The United Metals Selling Company." The Invesfor tells the story of the company as follows:

"It appears that the 'real thing' is not the Amalyamated Copper Company, but the United Metals Selling Company. As Lawson so pithily says, 'The beginning and foundation of the present "copper trust" is the United Metals Selling Company, a close corporation, controlled by the Amalgamated interests. The long and short of the matter appears to be that the Amalgamated Copper Company was organized for the express purpose of being 'milked' by the United Metals Selling Company. We have Lawson's authority for the fact that the Standard Oil people own the United Metals Selling Company. The public were solicited to step up and subscribe to the shares of the Amalgamated Company, but no one has ever heard of the public being invited to buy the shares of the United Metals Selling Company, The last-mentioned concern is unquestionably the means by which the promoters of the copper deal get their 'rake-off.' You do not find anything said about the United Metals Selling Company in any of the stock market or corporation manuals, it would probably require considerable of an effort to find out the real nature of its business, no statement of its affairs ever appears in print, and the size of its profits is entirely conjectural. The concern, in the language of the street, is regarded as a 'cinch' for the Standard Oil millionaires. There is the best of reasons for believing that the United Metals Selling Company has been earning at an enormous rate. We have recently made some attempt to ascertain the salient features of this enterprise, and tho we have not met with anything like the success that we could desire, we are nevertheless able to present a few points which may afford a pretty good inkling of the purpose and methods of

TIM: FLIES

-The Chicago Inter Ocean.

the United Metals Selling Company. In the first place, the capitalization, we find by a recent list of New Jersey companies, is \$5,000,000, of a par value of \$100. This capitalization, we are told, was all paid in in cash. There were only a select few invited to go in, prominent umong them being President Stillman, of the National City Bank, William Rockefeller, H. H. Rogers, Leonard Lewisohn, and A. C. Burrage. Altho the entire stock was, at last accounts, practically held by about a dozen men. these six were the most influential. We are also told on good authority that the stock sells for \$300 or \$400 a share, tho there are very few dealings even at these figures. We know of an offer of \$200 a share which was refused. The Metals Selling Company, so far as its dealings with outside companies are concerned, pursues a very conservative course; we understand that it is careful not to advance too large a percentage on the conper offered to it, the current reports state that, so far as the Amalgamated Copper Company is concerned, it has been more lenient. In fact, as one well-informed man says, 'it is not at all reasonable to suppose that the Standard Oil coterie will "hold the bag" for the Amalgamated Copper Company, and that whichever way the game goes the Metals Selling Company is bound to win out." And, finally, it may be added that we are informed that the United Metals Selling Company carned at least 40 per cent, last year; tint is, \$2,000,000 on a capitalization of \$5,000,000. From all that can be learned, it would appear that the Amalgamated Company is a mere detail in the plans of the Standard Oil people in connection with the copper situation. Amalgamated stock is a football, which they kick about the market in any way that suits their speculative purposes, much as Sugar stock has always been a football for the insiders in the refinling business. To-day they may be out of the stock and to-morrow they may be in. But their interests in the United Metals Seiling Company are entirely of another sort. This concern is their stand-by: in it they have a 'dead sure thing.' It provides them ail the means they could desire for absorbing the entire profit of the Amalgamated Company in the future, provided they see fit. This is an old scheme, and we have known it to be worked with the most extraordinary success in the past."

#### LAST YEAR'S LYNCHINGS, HANGINGS, SUICIDES, AND MURDERS.

A RECORD of the violent deaths of 1901 which appears in the Chicago Tribuna d'Indra, by comparison with previous yearly records, an opportunity to measure the moral amelioration or decadence of the American people in these respects. From such a comparison it appears that there were more lyuchings last year than the year before; but fewer murders. There were 7.85 murders, but only 107 executions for murder. Suicide is steadily increasing. We quote The Tribune's editorial review of these matters, followed by its statistical records:

"The dark records of hangiag and lynching are made up for the year 190." The former shows a gicam of encouragement. The latter, in some respects, is distinctly discouraging. There were 18 legal executions during the year, once less than during 199. Of those executed 21 were negroes and 47 whites. It is somewhat significant that, as compared with 1905, the number of negroes is increased 13 and the number of whites decreased 13 and the figures for 1905 being negroes, \$5; whites, 60. The South had 82 of the executions and the North 36, the ratio being about the same as last year, when the figures were 80 in the South and 39 in the North. The crimes which led up to these executions were as follows: Murder, 107; criminal assault, 9; attempted criminal assault, 1; train robbery, 1. In 1900 only five were hanged for criminal assault.

"This increase in executions for criminal assault would apparently indicate that this crimine, which is falsely assigned as 'the customary crime' in the South, is coming more and more to be punished by the law instead of by the moh, but the increase of lynching for the year makes it difficult to determine this with absolute correctness.

"The lynchings for the year number 135, ns compared with 115 in 1900, an increase of 20. Of these 121 occurred in the South and 14 in the North, as compared with 107 in the South

and 8 in the North in 1900, an increase which is not creditable to the five Northern States, California, Idaho, Montana, Kansas, and Indiana. The number of negroes lynched in 1901 was 107, the same number as in 1000. Besides these one Indian and one Chinaman were victims. Curiously enough the principal crimes which led to these lynchings are almost the same in the two years, being 30 for murder in 1001 and 30 for murder in 1000: 10 for criminal assault in 1901 and 18 for criminal assault in 1900, The six Southern States which have the largest number of mob murders are Mississippi, 16; Louisiana, 15; Alabama, 15: Georgia, 11: Tennessee, 12: Texas, 11. Three of these States, howver, show improvement, Mississippl having 4, Louisiana 5, and Georgia 2 less than last year, but Alabama has increased 7, Tennessee 5, and Texas 7. Discouraging as the figures apnear, there are many causes at work in the South which promise improvement. It is not encouraging that the number of lynchings in the North should have increased as much. The record of deaths by violence in this country in 1901

shows quite a decrease, being 7,852, as compared with 8,375 in 1900. The latter figures were an increase of 2,050 ever those of the preceding year. It is not possible, of course, to obtain accurate statistics on this point by mail and telegraph, as many cases are not reported, but they are sufficiently accurate to indicate are not reported, but they are sufficiently accurate to indicate of suicides, however, tells another and sadder story. In \$\to\$ 7,424 persons "shuffled off this mortal coil," are compared with 6,755 in 1920. The steady increase in the suicide habit, largely due to the case with which poisson may be obtained, this being the most common agency employed, is shown by the following record of cases in a series of pears: 1839, a. (20, 184), 1. (3), 1. (3), 2. (3), 2. (3), 3. (3), 3. (3), 3. (3), 3. (4), 3. (3), 3. (4), 3. (4), 3. (4), 3. (5), 5. (5), 5. (7), 1. (5), 6. (5), 5. (7), 7. (5), 6. (5), 5. (7), 7. (5), 7. (5), 5. (7), 7. (5), 7. (7), 5. (7), 7.

Lyachings.—"The lyachings reported in 1920 showed an increase of eight over those of 1899. A still further increase must be noted this year—an increase in brutality as well as in number —the record standing 107 in 1899, 115 in 1920, and 135 in 1920. The following table showing the number of lynchings in the last seventeen years may be of value to those engaged in the study of this branch of criminology.

1884		
1886	****** ** ****************************	
1857		
1888		
188g	196   1858	
1890	127   16-39	
1891	199 1900	
1842		
1893		

"The lynchings in the various States and Territories were as follows.

"Of these lynchings 121 occurred in the South and 14 in the North. Of the total number 107 were negroes, 26 whites, 11n-dian, and 1 Chinaman. The alleged crimes for which they were lynched were as follows: Murier, 39; criminal assault, 19; theft, 12; murderous assault, 0; attempted criminal assault, 8; cattle and horse stealing, 7; complicity in murder, 6; quarrel over profit sharing, 5; arson, 4; suspected murder, 3; suspected over profit sharing, 5; arson, 4; suspected murder, 5; suspected graph of the steady of

these, 9 were lynched because of race prejudice, 3 for unknown reasons, and there was 1 case of mistaken identity."

Hangings.—"The number of legal executions in 1901 was 118, as compared with 119 in 1900, 121 in 1899, 169 in 1898, 127 in 1895, 122 in 1895, 122 in 1895, 123 in 1894, 126 in 1893, and 107 in 1892. The number of executions in the several States and Territories was as follows:

Alabama 6	New York
Arkansas11	
California 1	North Carolina
Coiorado o	North Dakota
Connecticut o	Ohio
Delaware o	t)regron
Plorida 0	Pennsylvania

. here were 82 hanged in t	he South and 36 in the North, o

There were 82 hauged in the South and 36 in the North, of whom 71 were negroes and 47 whites. The crimes for which they were executed were: Murder, 107; criminal assault, 9; attempted criminal assault, 1; and train robbery, 1."

Saicides.—"Suicide continues to increase in the United States. The total number reported to The Tribun, for the year 1991 is 7,245, as compared with 6,755 to 1970 and 5,340 in 1899. Of this total 5,350 were males and 1,395 females, which curiously shows the same proportion of nearly five males to one female for several years past. Physicians, as usual, head the list among professional men, the record standing: Physicians, 33; attorneys, 10; clergymen, 10; bankers, 6; journalists, 6; college professors, 1. The causes of self-number were as follows:

Despondencys,98a	Domestic infelicity	541
Unknown	Liquor	4.29
Insanity 674	Disappointed love	18
Illahenith		

"Poison continues to be the most common agency in commiting saticle; 2, tole killed themselves with poison, 2,76 by shooting, 614 by hanging, 513 by drowning, 356 by cutting their threats, 55 by jumping from roofs and windows, 55 by throwing themselves in front of locomotive engines, 27 by stabbing, 23 by fre, 11 by dynamite, and 6 by starving."

Murders,—"The total number of deaths by violence in the United States during 1901 shows a small decrease, being 7.852, as compared with 8,275 in 1900. The causes may be classified as follows:

Quarrels	Resisting arrest
Unknown	Righwaymen killed
lealouse så	Self-defense
By highwaymen 193	Strikes
losanity 174	Outrage
Infanticide 149	

# LIQUOR JOURNALS ON SUNDAY SALOONS IN NEW YORK.

THE Journals devoted to the wine, liquor, and beer interests are already calling upon Mayor-elect Low and his colleagues not to yield to the sentiment against open salsons on Sanday in New York City. Midds's Criticolon, a liquor journal published in Chicago, declares that "the so-called reform movement of all the forces opposed to Tammany could never have disologed that body from its seat unless they had openly joined hands with the liquor interest which wished to free itself from the toils of the tigger's blackmail," and it alleges that "an agreement was arrived at between Mayor Low, Justice Jerome, and other leaders whereby some form of relief was promised." The Wine and Spirit Gazetti (New York) says: "Seth Low and William Travers Jerome have both before their election given

distinct pledges of a modification of the present excise law in a more liberal sense as far as the sale of liquor on Sunday is concerned, and right here let it be understood that from information received since the election of Measrs. Low and Jerome, the liquor trade of the State will hold both these public officials to a strict account. It expects them to redeem their pledges." The American Brezer (New York) makes a threat that the reform element will lose the next election if the saloons are shut up Sundays. It xays.

"Our citizens have made up their minds to the fact that they will no longer endura a Purishair. Sunday, but want to celebrate the Lord's day in a more continental fashion, that is, after the hours of religious service are over they want to enjoy the remainder of the Sabhath in a quiet and peaceful manner by visiting public gardens with their families, refresh themselves with harmless, attimulating beverages, and listen to the dramatic masterworks of the stage or to the sweet strains of classical musse, precisely like the most religious people of Europe day.

" Our people have commenced to realize that it is degrading to the citizens of a free country to have to enjoy on the sly certain harmless pleasantries of life, openly permitted to the subjects of a monarch; that it is inconceivable why the enjoyment of refreshments which by mere force of habit have become to them a necessity, and are permitted during six days of the week, should be stamped as a misdemeanor on the seventh day; and, finally, that it is revolting to an enlightened people of the twentieth century to have the day of rest and recreation turned into a day of arrest and condemnation. The free-born Americans are getting tired of having to buy immunity from their inferiors for things to which free citizens have an undisputed right. They will henceforth assert that right, defying their oppressors, and when the speculative and paternal country legislators once realize that in future nothing can be gotten out of New York, they will either give in and try to keep on good terms with the people of the great city, or leave them to their fate. Should, however, the self-styled guardians of the big child 'New York' continue in their arrogant attitude, then the ruling party in the State will be held responsible for their actions; the people will rise in their just wrath against that party and its leaders and wrest the muchabused power from their hands,"

#### LETTERS AND ART.

#### LITERATURE IN 1901.

THE most remarkable literary developments of the opening year of the new century in America have been described as "the rage for historical fiction and the exploitation of popular novels on the stage." The Rookman, which notes these tendencies and surveys the output of popular fiction in the English language during the past year, finds "a great many very clever and admirable stories," but "nothing particularly astonishing." It continues (Inmary):

"Summing up the past year, however, is a matter of personal opinion. Take, for instance, Mr. Kipling's 'Kim'. There are those who think that' Kim' is not only a great book, but one of the very greatest books of the last thirty years. There are others who think nothing of the kind. Some readers profess to find in Lucas Malet's 'The History of Sir Richard Calmady' qualities of scope and style that raise the book to a place among the great works of faction. Mr. Gibbert Parker's 'The Right of Way' few people would venture to call Mr. Winston Churchill's 'The Crisis' a great novel, but several hundred thousand appreciative readers have found it excellent and entertaining. And in this manner we might go through the entire list.'

In the lists of the six most popular books printed in The Bookman during 1901, "Alice of Old Vincennes" figures most prominently, having occurred in eight of the twelve monthly tables, "Eben Holden" and "The Crisis" came next, having been mentioned six times. "The Visits of Elizabeth" was five times mentioned: "Eleanor," "The Helmet of Navarre, " "The Puppet Crown, " "Graustark " and "Richard Yea-and-Nay " four times : "In the Palace of the King" and "D'ri and I" three times; and "The Right of Way," "Stringtown on the Pike," "L'Aiglon," "The Eternal City," and "Truth Dexter" twice. The following novels were only mentioned once : "Lazarre," "Kim," "Blennerhasset," "The Octopus," "Tommy and Grizel," "The Master Christian," "Tarry Thou Till I Come," "Wanted-A Matchmaker," "An Englishwoman's Love-Letters," "Quincy Adams Sawyer," "In the Name of a Woman," "Like Another Helen," and "The Turn of the Road." The Bookman comments

'In these tables there are mentioned twenty-nine different books, of which nineteen are the work of American witters. Eight of the others are by English writers, while 'The Right of Way' and L'Aiglon' were written respectively by a Canadian and a Frenchman. Of the twenty-nine books, twenty-one are the work of men, six of women, while the authors of 'An Englishwoman's Love-Letters' and of 'Trutil Dexter' have never positively been identified. Many think that Sidney McCall is a woman, while 'An Englishwoman's Love-Letters' is generally supposed to have been written by Mr. Laurence Housman. It is interesting to note that nine of these books may be classed as historical novels. Two more are of the 'Prisoner of Zenda' type, and two belong to the 'B gosh school.' Into four of the novels some kind of a religious element is strongly introduced.'

The "popular" method of classifying books is rather an unsatifactory one, as is remarked by several of the literary critics, Many American movels that reach a very high literary standard—such as, for instance, Dr. S. Weir Mitchell's "Circumstance," Mrs. Wharton's "Crucial Instances," and Gertrude Atherton's "The Aristocrats"—find no place in The Hookman's Tlists. The London Academy, in a comprehensive review of English fiction during the past year, prints not only a list of the most popular novels, but also a list of what it considers the best novels. It selects the following as being, in its opinion, the best twelve English novels of the year:

"Kim." By Rndyard Kipling.

"Sister Teresa." By George Moore.

"The Serious Wooing," By "John Oliver Hobbes."
"The White Cottage," By "Zack,"

"The History of Sir Richard Calmady." By "Lucas Malet."

"Tristram of Blent." By "Anthony Hope."

"The Column." By Charles Marriott.

"The Lost Land." By Julia M. Crottie.
"Casting of Nets." By Richard Bagot.
"The Lord of the Sea." By M. P. Shiel.

"The House with the Green Shutters." By "George Douglas."

The two greatest American novels of the year were "The Octopus," by Frank Norris, and "Sister Carrie," by Theodore Dreiser, in the judgment of *The Academy*, which also singles out for special mention Henry James's "The Sacred Fount."

American poetry has not been inadequately represented during the year, the most moteworthy effort in this field being generally regarded as Mr. William Vaughn Moody's recent book of poems. "Mr. Moody has without question the finest gift of any of the younger American poets," says Richard Le Galliemon (in the New York Journal); "his 'Ode in the Time of Hesitation' was a distinguished piece of work, not unworthy of Mr. William Watson. I must not forget, too," he adds, "that the year has brought us a new volume by Mr. Markham, a volume which more than sustains his reputation for noble numbers,"

Edwin Markham, writing in the same paper, comments on the silence of the "veteran vassals of the Muse," and praises Mr. Stedman's "stately ode on 'Yale's blossoming centuries." Richard Watson Gilder's "Five Books of Song" he deems the most important contribution to recent American poetry; and he also mentions the work of John Vance Cheney, Ella Wheeler Wilcox, and James Whitcomb Riley. Nor must the vigorous verse of Bliss Carman be overlooked. Mr. Markham continues.

"Other names familiar to us have come with their offerings to the Muse, Hamilia Garland with an infrequent song smelling to the furrow and the beaten road; Edith Thomas, with her aloot Itellenic notes of Earth and Arady; Louise Chandler Moulon, with tender poems of memory and of wondering; Ernest McGaffey, with his songs of the street and the open field; Father Tath, with his Herrick-bright lyrics in little; Horace Traubel, with his dithyrambic deliverance on the art of life, Edward Robeson Taydespair; Harry Thurston Peck, with a fartlet of trenchant and scholarly verse; George Santayana, with thoughfull somest souched with light Horatian grace; Emma Frances Dawson, with wild ballads freighted with eldritch mystery.

"Are there any marked teudencies in these overlapping and interlacing plays and labors of our poet-folk? There is a noticeable lack of epic verse. a lack also of any recent dramatic work, if we except Josephine Preston Peabody's "Marlowe." But a strong note of the year has been the poetic protest against war by Joaquin Miller, W. V. Moody. Edward J. Wheeler, and many others. And everywhere we see a continuance of the old sweet human themes familiar to the heart—themes of home and country and nature and love and sorrow."

Probably the most important postical events of the year in England, as summarized by If Me. Academy, were the publication of Mr. Henley's "Hawthorn and Lavender," Mr. Hardy's "Poems of the Past and Pressent," Mr. Yeats's "The Shadowy Waters," Mr. Meredith's "A Reading of Lafe," and Sir Edwin Arnold's "The Voyage of Hubols."

In addition to the year's fruitage of fiction and poetry, there has been a large output of more serious literature in biography, criticism, and history. Says the New York Tribnuc

"In biographical literature the year has been rich. It has witnessed the publication of Mr. Rashteigh Holt White's Life of Gilbert White of Selborne.' of Mr. Andrew Lang's 'The Mystery of Mary Stuart,' of Mr. Balfour's 'Life of Robert Louis Stewnson.' of 'The Letters of John Richard Green,' which through Mr. Leslie Stephems's admirable editing has the significance of biographical work; of Mr. Feat's 'King Monmouth,' of Mr. Thompson's 'Eugene Field,' of Mr. Taunton's 'Thomps Wost,' of Mr. Scudder's 'James Russell Lowell,' and of more in-

<sup>&</sup>quot;Our Friend the Charlatan." By George Gissing.

teresting books, indeed, than it is possible to name in this place. We have also seen the completion this year of 'The Dictionary of National Biography,' and, alas! the death has also been recorded of Mr. George Smith, the founder and publisher of that indispensable work of reference."

To this list must be added two autobiographies of more than usual interest,—"Up from Slavery," by Booker T. Washington, and "The Making of an American," by Jacob A. Riis.

In the field of literary criticism, Prof. Harry Thurston Peck selects three books as being preeminently worthy of mention,—Mr. John Churton Collins's "Ephemera Critica," Mr. Hamilton Mabie's "William Shakespeare," and Prof. Brander Matthews's "French Dramanists." From other books of a serious nature that have appeared during the past year, The Outlook (New York) selects Mr. Brownell's "Victorian Prose Masters," John Fiske's "Life Everlasting," Dr. C. C. Everett's "Essays Theological and Literary, "Professor Hart's "Fundamental Poundations of American Diplomacy," and Mr. Howells's "Heroines of Fiction."

# THE "FOREIGN CRAZE" AND AMERICAN

A CORRESPONDENT writes to the Springfield Republican to protest against what he terms the "cray Enropean musical tendency," manifested during recent years in this country and finding expression in (1) the rage for foreign grand opera in a few large cities, (2) the reluctance to give opera in English, (3) the prevalence of foreign-born players and singers in the United States. He says:

"Surely the unmindful conduct of the American public toward the use of the mother tongue, in opera at least, merits the severest censure. Think of an American-born artist like Nordica or Sanderson refusing to sing in English, because to do so would mean loss of musical caste! And recall the recent interview of Grau in a Western paper-on his late trip to the Pacific coastin which he is reported to say that the American public prefers an opera badly sung in Italian, French, or German to a well-sung opera in English. Can not something be done to change this state of things? An American opera, however meritorious. Grau is reported to have said, doesn't stand a ghost of a show of being staged, because the American public will not buy tickets to American productions. What promise for our musical future! Must we forever have foreign operas sung by foreigners? Is there not somewhere an American benefactor-an Andrew Carnegie-who will see that this national wrong is righted? Why should not you in The Republican, and Krehbiel in The Tribune, and Henderson in The Times, and Huneker and all your class measure up to your responsibility in this matter?

The Musical Courier (New York) voiced the same sentiment not long ago in the following sarcastic paragraph:

"American singers are not able to make any money, even as when they give great rectains of great and new songs, such as George Hamlin, with 1s Reights of great and new songs, such as George Hamlin, with 1s Reights, in New York City. Had it see Georgibusky Hamlinski of Gregorowitchkiville, Umbillicumun-key, Turkestan, singing in a language which no one could understand, he would have bad \$1,600 in the house; the name alone would have done it, and with long hair hanging over his ushamponed skull \$408 more would have been taken in at the door."

Commenting on the spirit of these remarks, the Springfield Republican contends that it is not true that the American artist is crowded out by the foreigner. The trouble is, it says, that America is simply not ready to stand alone. It continues:

"Where are the four native Americans who could take the place of the Kneisel quartel? Where is the American Yasyer, Cesar Thomson, Gregorowitsch, Kreisler, Petschnikoff, Sarasate, Burmeister, Kubelik, Lady Halle, the American Paderewski, Gabrilowitsch, Bauer, d'Albert, Busoni, Carreno, Priedheim, Sloti, Rosenthal, Dohnanyl' Such names, and the list might

run ou indefinitely, show how slight the body of American achievement still is. Most of the best American players are of foreign birth or extraction, like loseffy and Godowsky on the piano, Kneisel, Bendix, Spiering on the violin, Schroeder, Schulz, and the late Fritz Giese, on the 'cello. There are good American names, Maud Powell and Leonora Jackson among the violinists, William Mason and William 11. Sherwood among the pianists. Yet none of them has attained a place in the foremost rank, and, taken together, they represent but a fraction of what is needed by this great country of 70,000,000 people. We can not dispense with the foreign artist yet a while. When we can do so, in fact, it will no longer be necessary. Germany does not find it necessary to worry about the invasion of foreign artists, nor does France. The simple fact of the case is that America is just now a vacuum, which is being filled by pressure from outside.

With regard to the more immediate question of singing in Engish, The Republican confesses to some sympathy with the viewpoint of its correspondent, and believes that the tendency in that direction is bound to become more marked as time goes on. It says:

"The real difficulty is that of translation. The better a song is in its mating of music and words, the more impossible if is to translate it adequately. Most of the available translations would be enough to make one weep, were it not for the fact that most singers are nereifully defective in enunciation. There is a crying need for real literary arists, with taste, a knowledge of music, and that sense of humor which, for some obscure reason, English the great musical treasures in German and other languages, both songs and operas. Until this indispensable foundation is laid, opera in English muss be unsatifactory."

#### "THE FATHER OF THE ENGLISH NOVEL."

THERE are signs of a serious revival of interest in the eighteenth-century novels of Samuel Richardson. New issues of his complete works are being widely advertised both in England and in this country, and it is rumored that Mr. Austin Dobson has retired from his official duties in order that he may devote all his time to writing a biography of this novelist. A bust of Richardson, the gift of Mr. Passmore Edwards, was recently unveiled in St. Bride's Institute, London, by Mr. Anthony llope, who paid a warm tribute to the man he honored as the "Father of the English Novel."

Prof. William Lyon Phelps, of Yale University, who has written a life and introduction for the newly published American edition of Richardson's works, thinks it a curious fact that the analytical novels of this English writer should enjoy a "vogue" at the present time, when "the boisterous and bloody historical romance is the predominant form of prose fiction." "Possibly," he says, "the demand for Richardson indicates the turning of the tide, for fashions in literature are as changeable and as difficult to predict as fashions in clothes. It may be that readers are becoming weary of strange oaths and technical terms of fence, and that the voice of the realist will again be heard in the laud." He adds (in The Interpendent).

"There are many persons in every age who, for a variety of reasons, can not read Richardson with pleasure; hut there will never be lacking the judicious lovers of great art, to whom the pages of "Pannel" and "Clarisas" will be a perennial delight. The greatest thing in the world may be Love, but the rarest thing in the world is Genins; and every generation contains a sufficient number of the wise who know how to appreciate it, The present revival of Richardson is not the resurrection of an extra contains a sufficient number of the wise who know how to appreciate it, the present revival of Richardson is not the resurrection of an eritic, it is the spontaneous return, on the part of these when yet of gitter and times, to a great literary genius who can teach us many important lessons in the art of true realism, and whose work abdies because it is gennine."

For many years it has been rather the fashion to ridicule Rich-

ardson, both as a writer and as a man. Mr. Leslie Stephen remarks in the "Dictionary of National Biography" that Macaulay was Richardson's last enthusiast, and Horace Walpole once said that he found " Clarissa " and "Sir Charles Grandison " deplorably tedious lamentations. On the other hand, no less a critic than Mr. Augustine Birrell has declared that "there is nothing to be proud of in not being able to read 'Clarissa,' or to appreciate the genius which created Lovelace." Mr. H. Buxton Forman, a student of many interesting phases of English literature, thinks there is some truth both in the friendly and hostile criticisms of Richardson's work. Writing entertainingly in The Fortnightly Review (December) on "the narrowly sententious. not to say sanctimonious, tone" of Richardson's writings, and on the "overweening vanity" of the man, he comes to the conclusion that perhaps the greatest service that Richardson rendered to English letters was in focusing "the wandering rays of Henry Fielding's genius." For Fielding's first book, "The History of the Adventures of Joseph Andrews," was in reality a luge

SAMUEL RICHARDSON,

moral-spinning " of "Pamela"; and it undoubtedly spurred Richardson on to the creation of his greater povel. "The History of Clarissa Harlowe." If we had only to thank Samuel Richardson for setting Fielding on the path which led to "Tom Jones" and "Amelia." declares Mr. Forman, we would be deeply in his debt; and, per contra, "had we nothing to thank Fielding for but the part

satiro on the "sen-

timentality and

to the construction of the

The London Academy thinks that in spite of the fact that Richardson was the exponent of "a naturalism as unflinehing, complete, and exact, and a sensuous pathos as beautiful and moving as any that the nineteenth century can show," he will use the appreciated by the readers of our day, disadvantaged as he is by "grotesque mannerisms and an almost infinite tedmn." It continues:

"We picture the courageous attack about to be made on Richardson by the average cultured reader. That reader will choose 'Clarissa,' of course, and, braced and firm, he will commence on perusal. In the first fifty pages he will probably be beaten off with great loss. But he will return to the charge and have his reward. He will be amazed and delighted by the truth, the power, and the leanty of this new author. Occasional loss, greater will not terrify him. It will discover Richardson to his friends, and preach it abroad that Richardson was the greatest covering that ever lived. And then, perhaps about the fifteness of the result of the property of the control of the result of the results of the results

In a sinister and dreadful light. He will perceive that he has journeyed through one eighth of the entire work. His fancy will conjure up an awful vision of the remaining seven-eighths. He will just the first volume down, and for some weeks will feel ashaned at his owardlee in not taking up the second. At length he will recover his good opinion of himself, and will jauntily remark, as he glances at a certain shelf, No. Life is too short!"

# TRIUMPHANT INDIVIDUALISM IN

In studying the tendencies of contemporary literature, eminent critics have named cosmopolitanism, new humanism, and the revival of idealism as the dominant characteristics of that realm. Brunetière and others have discussed the significrace of the new 'world-literature', produced no for any one ation or even race, but for certain classes of readers throughout the world. The decline of realism, the renewed interest in historical fiction, and other phenomena have been connected in some way with the spirit of the age as manifested in art and letters.

This subject is broadly discussed in the final chapter of a book entitled "Le Mouvement Littéraire Contemporain," written by the ablest of the younger French critics and professors, Georges Pelissier, whose works have been crowned by the Academy. The work is an claborate study of the literature of the last twentyfive years. He discusses the development of the novel, the drama, of poetry, history, and criticism during this period. His thesis is that no single tendency has predominated in any one of three spheres, and that no potent, irresistible influence has molded them. There have been conflicts, failures, declines, and reversions, but neither decisive victories nor absolute defeats. There has been no unity, no overshadowing force; but literature, according to Pelissier, has been more vital, spontaneous, true, and independent than at any other previous time. It has lived, and its present prospects are the brightest and most alluring conceivable. The detailed demonstration is summed up in the concluding pages, from which the following is translated:

"Excepting history, which, having become objective and specialized as a science, has parted with literature proper, the literary evolution has culminated, in our time, in the triumph of individualism in all directions.

"Long restricted by an exclusive formula, the novel has regained its free diversity. Each novelity hants people and things as he sees them, without subordinating them to any theory of a school. Thus even the most doctrinaire critics would find it extremely difficult to extablish a classification among the new-comers. There is, in fact, nothing in common among them save that which, by the very definition, inheres in all fiction.

"On the stage, all mechanical rules whereby plays are well mado have been abolished. No conventions are permitted other than those which dramatic art as such can not do away with. A few years have sufficed to render the formula of the new theater as old as that of the aucient stage. The new theater admits every form, every gener, and demands nothing except originality and sincerity.

"In poetry, symbolism will pass away, no doubt, or has already passed. But what has remained is the freedom of the poet to bend his prosody to his own inspiration, to express in meter and rime the finest shades of his sensibility.

"In criticism likewise the entire andacity of the dogmatists has not prevented impressionism from prevailing over their categorical assertions. And impressionism is only another name for individualism."

Will a new school appear on the ruins of the old ones? adds Pelissier, and ho answers in the negative. And, ho says, we have nothing to regret, "Thanks to the elassical school, the same tragely was made for one hundred and fifty years; thanks to the Parnassians, the same Alexandrines were made for thirty years; thanks to naturalism, they wrote for twenty years the same sort of novels." A school is formed by the parrowness of its formula, by what it has of an exclusive and oppressive character-by what it denies rather than by what it affirms. What, in truth, has been the history of the literary tendencies?

"Classicism was nothing but a return to nature. All the great classical writers rejected, with one accord, every form of art which was not a faithful reproduction of reality-and not merely such forms as lowered and debased nature, but also those which affected to exalt and refine it. When the romanticists destroyed the antiquated classicism, they too proclaimed a return to nature. Of naturalism it is enough to mention the name. Thus each of the schools has in turn fought under the same banner and with the same avowed object. Whence, then, the successive revolts and transformations? Each had its own limitations upon nature. Classicism excluded everything that did not answer to its idea of nobility and truth; naturalism reduced itself to the unpleasant and vile aspects of nature; romanticism was characterized by a curious dreaminess and exaltation of the affective faculties. There is no school without artificial and arbitrary distortion of nature. . . . . .

"For some years we have been celebrating the reappearance of idealism in literature. But there is no real antagonism between realism and idealism. Art is not truly realistic if it overlooks the ideal element in life, and it is not idealistic if it is not firmly planted on the real. The superior writers have managed to reconcile these essentials. Their superiority rested on the comprehensiveness, scope, and range of their work-too large and various to come under any narrow rule,

But what becomes of continuity of tradition, of fidelity to the past? Pelissier answers that tradition is not something fixed and immutable. At what period in a nation's literature is a tradition fully formed? A literary tradition continually undergoes modification, expansion, augmentation, revision. What is now tradition was once heresy and violence to art. After all, nothing counts in literature except individuality, originality. At times individuality degenerates into eccentricity, but even this is better than commonplace and colorless imitation. Still, heredity, national genins, and education are effectual preventives of exaggerated and bizarre individualism. The right to be oneself is not the right to be eccentric and grotesque, and literature has once for all emancipated itself from tyranny and acquired freedom and spontaneity .- Translation made for THE LITERARY DIGEST.

#### SHOULD LITERARY MEN GO INTO POLITICS?

HE announcement that Mr. Booth Tarkington has decided to become a candidate for the Indiana legislature has led to some interesting comment in the newspapers on the relation of literature to politics. The New York Sun argues that Mr. Tarkington's ambition is a most laudable one and is certainly in order, considering the fact that the manufacture of novels has lately become one of the most popular and lucrative of professions. In view of the large financial returns that Mr. Tarkington has derived from his books and plays, The Sun concludes that he must have "some insight into financial matters," a fact which can not fail to contribute to a successful political career, Purthermore, it requires no little hardihood for any one to oppose an aspirant who has it in his power, in the event of failure, to retaliate upon his opponent with his pen. The Chicago Record-Herald says:

"The 'literary fellers' are taking altogether too lively an interest in politics to permit the professional politicians to feel at all secure. Here in Chicago, for instance, we have the Hon. Ernest McGaffey, poet, holding a \$5,000 a year city job, thus causing some ward politician to stand outside hungry and hurt at the public's ingratitude, and even now it is rumored that a luminous literary star-a great editor, in fact-has a desire to occupy the seat held down by the Hon. 'Billy' Mason in the United States Senate. President Roosevelt is himself a literary man, and Mr. Tarkington, in the announcement of his candidacy for membership in the Indiana legislature, frankly declares that he wishes this to be the beginning of a political career which shall land him in Congress at least.

"Mr. Dooley has, we believe, moved to New York, else we might nominate him for Congress with the full assurance that he would in the great council of the nation reflect high credit npon this city. Still, we have Mr. Ade. Mr. Fuller, Mr. Friedman, and many other literary gentlemen, to say nothing of the mate anonymous Gladstones who illumine these pages, who are fully capable of filling with credit all the great offices within the gift of the people of our city and State.

"We shall watch Mr. Tarkington with steadfast interest. If he gets himself elected, it may come to pass that Thomas Bailey Aldrich shall some day be mayor of Boston and that New York will turn from Platt to William Dean Howells for political guidance. Mr. Tarkington is undoubtedly but one of the signs presaging the breaking of a new light."

Harber's Weekly (New York) points out that there are already historians in Congress The Senate has one in Mr. Lodge, and the Honse has just acquired one in Mr. James Breck Perkins, of Rochester. The British Parliament has had plenty of literary men, from Disraeli down, and has Gilbert Parker now. Only a few weeks ago Hall Caine entered the Manx "House of Keys." There is no doubt, observes the same paper. that a few contributors like "Mr. Doolev" and Mr. Tarkington would do very much "toward increasing the circulation of The Congressional Record and making it profitable to its publisher"!

#### THE BOOK BAROMETER.

F the new books, Seton-Thompson's "Lives of the Hunted" and Ralph Connor's "The Man from Glengarry" occupy the most prominent places in the booksellers' reports for the month ending December 1. The close contest for supremacy between "The Right of Way" and "The Crisis" is as marked thus month as in the preceding lists, and many of the old favorites are still holding their own in popular regard. The full lists (which we take from The World's Work, January) are as follows:

4. The Crisis-Churchill Lazarra - Catharwod. Lives of the Hunted-Saton. 2. The Cavalier-Cable. 6. The Etarnal City-Cains.

#### MRS. LESLIE CARTER AS "DU BARRY."

SOMETHING of a dramatic triumph has been won by Mrs.
Leslie Carter in the new play by David Beliaco now being
presented at the Criterion Theater, New York. The New York
Times goes so far as to say that this production has "relieved
from the stigmn of almost absolute barrenuess the first half of
the theatrical season of 1901-02"; and the New York Herald
declares that Mrs. Carter has scored "an overwhelming popular
success." The Times says further:

"The story, with just enough historical accuracy to preserve the general characteristics of its main characters and to reflect the decodericy of the period in which they had their being, has no especial freshness. It is the familiar theme of a woman who in a manient of passion over a lover's slight gives her very soul to a king, then sights for the sweet essence of a holy love, and finally carries out to the bitter end the destiny that the fates have foresholoused for her

"But to this theme Mr. Belasco has brought the resources of that theatric skill of which be has so often shown his masch shown his masch. He knows every device of the craft, and in this new play he has evolved situations and devised combinations of situations of situations of situations of comes at the end of the fourth act, when Louis, King of France comes at the end of the fourth act, when Louis, King of France driven almost to madness with jealous rage, orders Du Barry to reveal to him the bidding-place of Cosse-Britsea, her lover, but consents, after an interview in which she has employed all the resources of womanly wit, cajolery, affection, and defaction, and the sharp she had been supported by the same proposed to the state of the same proposed sharp with the same proposed sharp and sharp sha

Mrs. Carter excelled any of her previous efforts in the realm of emotional acting."

The enthusiasm of The Times and Herald is not shared, however, by the critics of the other papers. The Commercial Advertuser "one of occasional theatrical strength with intervals of dulness." Mrs. Cardulness." Mrs. Car-

ter, observes the same paper, "is a machine always in her acting, except in outbursts of rage, which ring true and strong." The Envision Feet, while conceiling that "D B Barry" is "an uncommonly elaborate, costly, picturesque, and attractive spectacle," and predicting for its houg and proposerous run, thinks the piece, as a whole, "garrish and artistically empty." And Mr. William Winner saws tin The Tribunot.

"It has pleased Mr. Belasco to select, for public illustration in a drama, one of the most depraved and dissolute femiline characters that hang upon the fringes of history, that of the name-less bussy who, about a hundred and thirty years ago, was picked out of the streets of Paris, and, under the anxylices of the most nontrious titled blackguard of his time, wedded to a complainate degenerate, in order that she might succeed the Pompadour as the mistress of Kug Louis XV. of France. This courtesan,

Marie Jeanne, ennobled as the Countess Du Barry,—potent in the actual life by reason of her presonal charms and flagrant debauchery, but in no otherwise uotable among women,—is the heroine now embodied by Mr., Carter, at the Criterion Theater; and a precious privilege obviously it is, in this season of sacred festival, that the

community can exalt itself by gazing upon such an actress in such a part.....

"Mrs. Carter, as an actress, has long been known as an adept in coquetry. and on this occasion she again displayed her physical fascination; but if the lady would refrain from removing her shoes and showing her feet every five minutes during the performance she would be more succossful in even this easy vein of enchantment. In serious business the

method of this ac-

MR. DAVID BELASCO.

tress is to work herself into a state of great excitement, to veep, to vociferate, to shriek, to rant, to become boarse with passion, to flop, and to beat upon the floor. This method has its votaties, to that to judicious observers it is mere fines and folly. The according to the floor who loses self-control can never truly control an audience. There is, nevertheless, much merit in the performance, and the actress was often applauded and recalled. The piece contains a plentude of needless talk, and is overweighted with scenery, costumes, people, and the accessories of spectacle. As a production "Un Barry" is coatly and ostentiatious, but lawary counts for little unless it is used with judgment. 'Du Barry' will undoubtedly have a prosperous catery.

#### NOTES.

The Bibliographer, a monthly journal devoted to the interests of the collector of books, manuscripts, and autographs, is announced for publication at an early date by Messra, Dodd, Mead & Co., New York. Its editor will be Mr. Paul Leicester Ford.

SEXATOR CLARK, of Montana, has just bought for "fongen francial pupon be art collection of Dr. Preper, Capellimeister of Vienna. This collection is composed of forty works by old masters and twenty-six modern pictures of the Yrena. This school of six, and is quite a notworthy addition to American-owned art. Among the painters represented are Julid, Holbein, Rembrandt, Robens, Van Drck, Vetsagnez, Daulpign, and Corot.

It is announced that the Kensington Bornugh Council, London, has decided to accept Lord Leighton's residence, as a gift from the suster of the late president of the Royal Academy. The house is full of fine attolies and drawings illustrating the dead master's methods. William Hogarth's home in Chiswick, which is in private hands, is also to be preserved, as a memorial of the great Rigitish satirus.

THE recent unveiling of a Heine monument in the Montmarter Cemetery, Paris, in the presence of a composition gustering of about two thousand nen and women, was a literary event of more than usual imbedies of the presence of a composition gustering of about two thousand nen and women, was a literary event of more than usual imbedies, and was a particular to the composition of a present of the Vienna Memorial Committee, operad the proceedings. #### SCIENCE AND INVENTION.

#### HAD ALL MANKIND A COMMON ORIGIN?

'HE idea that every living man is a distant cousin of every other, that is, that all the members of the human race are descended from a single pair, is very firmly rooted in popular belief. It is, however, not supported by a single anthropological observation, and is opposed by most of the facts of human development, so we are assured by Prof. W. J. McGee in his vicepresidential address at the last meeting of the American Association. Professor McGee contributes to Science (December 27) an abstract of his address in which he says that what he calls the "monogenetic idea" is a "postnlate so simple and strong that few anthropologists take the trouble to question its validity." Yet, he goes on to say, once the question is raised, the postulate is seen to be gratuitous; in the present state of knowledge it may not be either affirmed or denied with confidence; but it "is not supported by a single observation in the domain of anthropology, and is opposed by the great body of observations on human development." Those who make the assumption that mankind had a common origin proceed to explain how the race has differentiated, deriving this explanation, however, according to Professor McGec, not as an inference from observed facts, but as a corollary drawn from the assumption. He proceeds:

"The great fact attested by all observation on human development, and susceptible of verification in every province and people, is that mankind are not differentiating in either physical or psychical aspects, but are converging, integrating, blending, unifying, both as organisms and as superorganic groups. The population of the world is steadily increasing, but the number of races is not; while the number of distinct peoples is progressively decreasing and the racial boundaries are slowly but surely melting away. This present condition is in accord with the past so far as history runs; races have not come up, tribes have not multiplied, but distinct peoples have coalesced, dialects and languages have blent into common tongues, throughout the known world-indeed, the processes of integration have been so characteristic of human progress throughout the historical period that it is now possible to announce, if not to establish, the proposition that peoples are preeminent in proportion to the complexity of their blood and culture. These salient facts of the present and of the recorded past fall naturally into a generalization of integral or convergent development, which in turn points toward a hypothesis of polygenesis.

It is asserted by Dr. McGee that when we study a race or congeries of tribes similar in physical features (the American Indians, for instance) their history is found to be one of coalescence, through the growth of stronger groups and the assimilation or elimination of weaker, through the interchange of industrial products and processes, through intermarriage, the giving and taking of linguistic elements, and the interchange of custom, faith, ceremony, law, and other factors of culture. This process may be slow, but it is always present, according to Dr. McGec. We see it even more conspicuously in African tribes, from the pigmy Akka to the gigantic Zulu, while not a single satisfactory indication of differentiation or increasing distinctiveness has ever been detected; so that here, too, the lines of development when traced backward are found to diverge toward different origins rather than to converge toward a common origin. The writer concludes :

"And what is true of America and Africa is more or less conspicuously true of other continents and other peoples; everywhere the developmental lines converge forward and diverge backward, just as the lines of biotic development diverge forward and converge backward. How this discrepancy is to be removed is a question whose importance increases with every advance in the science of anthropology.

"It seems not too much to say that the leading question before

the anthropologist of to-day is that relating to the trend of human development and its bearing on the alternatives of monogeness and polygenessis, for it is easy to see that most of the other questions are affected by this primary ose. The definition of race, the discussion of human antiquity and various civil problems of the day are all involved; and while it is too much to hope for general agreement concerning the fundamental question at any early day, it is most the less desirable to note the trend of multiplying facts and observe their steady set toward the induced bypothesis of polygenesis rather than toward the deductive assumption of monogenesis.

#### STILL DISCUSSING MARCONI.

THE experiments of Signor Marconi are still in statu quo, his new location not yet being occupied. The comments of the technical press continue to be cautious and their entlusisism is conditional. Says The Electrical World and Engineer (December 21):

"The details reported up to the present time are altogether too meager to enable any reliable conclusions to be drawn as to this alleged transmission across the Atlantic Ocean. It would seem

STANDARD MARCONI APPARATUS.

Permission of The Electrical World and Engineer, New York.

that only triple successions of dots corresponding to the letter S in the Morse alphabet have been reproduced at the receiving instrument. In view of the well-known possibilities of disturbance from purely local atmospheric phenomena, it is only reasonable to look for the actual exclusive transmission of words by wireless transatlantic signaling before reliance can be fully placed on all the statements thus far made.

"The maximum distunce over which readuble wireless signals have been bittered seams to have been between St. Catharines, on the Isle of Wight, and the Lizard, Cornwall, a distance of 156 miles. The sudden increase in distance to 2,000 miles represents more than a tenfold increase of radius, which we should expect to be overstepped more gradually. Sooner or later, however, it is reasonable to expect that wireless messages will be transmitted over transathattic distances. As to whether will be transmitted over transathattic distances. As to whether the circumstance of the contract of t

It is pointed out by *The Western Electrician* (Chicago, December 21) that there may have been error on the part of the observers, or, if not, the observerd "dots" may not have come from Eugland at all, but from some other source. It says:

"As to the likelihood of error in observation, there is always such a possibility (altho in this case hardly a probability) so long as human beings are failible. Concerning the chance that the signals may have come from some naknown cause, there is the possibility, as Professor Freeman points out. . that atmospheric conditions may have caused the receiving-apparatns to 'dot.' Again, it will be receibed, as an interesting coincidence,

If nothing more, that just about a year ago Tesla, who has long experimented along the line of wireless transmission, announced that he had observed electrical actions in his apparatus which apparatus help apparatus from the properties of the properties of the properties of the properties of them as a "nessage" realing "One—two—three." The similarity between this signal, if such it may be termed, and Marconl's three dots is certainly striken.

From The Scientific American (December 28) we learn that English physicists are particularly skeptical regarding the Newfoundland experiments. It says:

"Sylvanus P. Thompson, altho accepting Marconi's statements, leaves us to infer that success would not have been so easily attained if the letter 'V' had been transmitted instead of 'S.' Professor Dewar, if he has been correctly quoted, does not believe that the possibility of transmitting signals across the Atlantic has as yet been adequately demonstrated. On the other hand, Mr. Edison accepts the report as authentic, and Professor Bell has cabled his congratulations and has offered his place on the coast of Nova Scotia as a place for future experiments."

The writer quoted believes that Marconi's abandonment of his Newfoundland station was premnture. He says:

"It seems extremely doubtful whether the Angio-American Cable Company could have enjoined him from continuing his experiments. Of course, very much depends upon the nature of the contract entered into between the company and the Government of Newfoundland, but it is a well-accepted principle of the patent law that an inventor is entitled to make use of a patented device, provided it is for purposes of experiment only. Had Marconi perfected his system to such an extent as to place it upon a commercial basis, the conditions would have been far otherwise; but certainly for purposes of experiment it seems as if it would have been a difficult matter to have induced a conrt of equity to grant un injunction which would prevent his carrying on experiments which are being watched with such intense interest from the four corners of the earth. The Anglo-American Company does not claim to control any patents covering the mechanism employed by Mr. Marconi. So long as he does not land n cable on the coast of Newfoundland, it is a grave question whether it would be possible for them to prevent him from setting up an instrument in which the vibratory impulses are reeeived through the medinm of the nir."

The following particulars regarding the scene of the experiments are furnished by The Electrical World and Engineer:

"This is not the first time that the island of Newfoundland has formed a center of interest from such a cause, for it was there, in 1858, that the earliest word came in over the transatlantic calle. The condition of distance ruled it thus in the one case as in the other, for this triangular island forms virtually the elbow of the continent, stretching out farthest of any point in the temperate zone toward the European shore. On the outer side of Newfoundland is a peninsula which just from the island as that does from the Canadian coast, and on the extreme eastern reach of this peninsula of Avodon rase the two tall rugged pre-reach of this peninsula of Avodon rase the two tall rugged pre-Signal Hill—520 (set high—which stands as the northern post of the harbor gate, that Marcon tees his kine.

Effectiveness of Double Sashes.—An experimental study of the amount of heat that is transmitted respectively by single and thouble window-sashes has just been made by Prof. I. Schoentjes, of the University of Gand, whose results are described in the Revue Scientifique (Parls, November 190). It is possible, of course, to calculate these amounts theoretically; but the investigator wished to measure them directly, and he did so by an ingenious electric method. He concludes that for a single thickness of glass, the coefficient of transmission (proportional to the heat that passes per hour for a given difference of temperature) increases as this difference increases. When the glass is wet on the outside, the coefficient is considerably larger and it is more than doubled when there are wind and rain outside. For

double sashes the coefficient is reduced nearly to one-half. Says the writer:

"The effectiveness of double asahes is, then, considerable, as in well known; but it is not in suster of indifference whether we adopt a great or a small distance between the panes. Experiment shows that above the distance of 27 millimeters [about one inch] the coefficient diminishes as the distance increases, and that it renches a minimum for a distance between 67 and 17 millimeters [between 135 and 135 inches]. For greater distances it increases very slightly; . . . The puricular late that results from these conditions is that the distance of the panes ought to be at least 8 centimeters [3 inches] to give to the double sash its till beautiful control of the control of th

#### A STUDY OF THE EYES OF ANIMALS.

THE most exhaustive investigation of the eyes of animals that has ever been undertaken is that of Dr. Lindsay Johnson. His full results, which have been obtained with the ophthalmoscope and have led the investigator into all sorts of adventures, have not yet been published, but part of them been just nppeared in the Philosophical Transactions of the Royal Society of London. Among his conclusions is this, that some discusses of the human eye are merely reversions to an ancestral type, since he finds them to be normal conditions in certain animals. Auture, which reviews his paper (December 12), tells us that his subjects included both a live lion and a live while, and that he visited, mirror in hand, "not only the zoological gardens of many countries, but also the native hannts of many wild creatures." Save the reviewer:

"The general result of Dr. Johnson's observations is to show the existence among mammalia of very wide differences in two respects: first, as regards the vascular supply of the optic nerve and retina; secondly, as regards the presence, coloration, and pigmentation of the tapetum [the characteristic layer that causes the cut's eyes to shine by reflected light].

"With regard to the first of these, it may be said that the general type presented by the human eye, that is, the presence of a central artery and vein of the retina, finding entrance and exit among the fibers of the optic uerve, and constituting a practically closed and complete retinal circulation, is more or less preserved in monkeys, lemurs, the enrnivorn, some of the ungulata, some of the rodentin, and some marsupialia, but is either absent or concealed by tapetum in the Australian fruit-bat, the Indian rhinoceros, Burchell's zebra, the American tupir, the African elephant, the Canadian beaver, the chinchilla, the guinea-pig, the Central American agouti, the Brazilian porcupine, the hairy armadillo, the wombat, the squirrel-like phalanger, and the echidua; while among these inter animals there are great differences in the blood-supply of the optic disc itself, which in some of them, as in the Indian thinoceros and the hairy armadillo, is of a dead white like the whiteness of atrophy in the human subject; while in others, as the zebra, it is abundantly vascular, and is surrounded by a radiation of small vessels extending a short distance from its periphery. In many animals the optic disc is deeply excaynted up to its margins, and resembles that of chronic glaucoma [blindness due to opacity of the vitreous humor] in the human subject, n state of which the best examples are furnished by the seal, the serval, and the red and white flying-squirrel. . . . . .

"The coloration of the tapetum varies greatly in different animals; and Dr. Johnson calls particular attention to his drawing of the eye of Monteiro's galago [squirrel-lemmr] in which the general yellow of the central part of the fundus is surrounded by n zone of pigmentation precisely resembling what is called pigmentary reminits' in the human subject. Dr. Johnson it pigmentary reminits' in the human subject. Dr. Johnson it disease, but rather a reversion to a type of structure which is the rule in night-seeing animals."

While admiring Dr. Johnson's perseverance and the beauty of

his drawings, the reviewer remarks that indement must be suspended with regard to the value of his work, for his drawings, notwithstanding their great merit, are as yet mere personal records, liable, it may be, to some disturbing personal influence. He concludes:

"It is much to be regretted that photography has not been made available for taking pictures of the eye ground from which this element of uncertainty would be removed. Even if this were done, it would still be necessary to determine, by more extended portraiture, whether the conditions described are normal ones or subject to variation in individuals."

#### FALSE METEORITES.

M ETEORITES, it appears, are not exempt from the great natural law that "all things are not what they seem." Mankind seems to be especially prone to believe that a bit of stone or iron that looks in any way odd must have originated in

the spaces outside

our earth. Hence

we are told by M.

Stanislas Meunier.

of the Paris Mu-

seum of Natural

History, that estab-

lishment possesses a

large collection of

FURNACE SLAG FOUND AUGUST A 1846. BV A WORKMAN WHO RELIEVED THAT HE SAW IT FALL THIRTY FEET FROM HIM, ON THE OR-

nse u do-meteorites that have been given to it from time to time, often by men of eminence in science. M. Meunier writes in an interest-LEANS ROAD AT BAGUEUX. ing way about some

of these in La Nature (Paris, December 14). He says:

"For a number of years past a taste for meteorites has been spreading and numerous scientific men have devoted themselves to the collection of these sidereal masses. At the same time some persons, more clever than scrupulous, have endeavored to play on the good faith of too credulous clients by making them accept as meteorites specimens of purely terrestrial origin. . . .

"Recently there occurred a case that deserves to be saved from oblivion-the manufacture of meteorites that was undertaken by some inhabitants of the island of Corsica. They selected in their mountains great blocks, weighing ten kilograms or so [20 pounds] each, of the common rocks known as onlites and serpentines, and which have certain resemblances to meteoric stone. altho not sufficient to deceive an expert. To these blocks they gave the desired form with tools and then they covered them with a 'black crust.' '

To obtain this black crust, which is a very distinctive sign of meteorites, the writer goes on to say, the Corsicans covered their stones with melted sulfur with which lampblack had been mixed. Professor Meunier, however, recognized the deception at first sight. Several of the blocks were thus prepared and offered to an amateur collector with a detailed account of the circumstances of the fall. The arrest and conviction of the guilty parties followed. Professor Meunier continues:

"But besides these swindlers there are a host of the most honest persons in the world who take for meteorites all sorts of objects having no community of origin with them. This is so true that collectors ought to be on their goard against mistakes which may be a serious matter for them and which have been serious in more than one case in the past. One of the clearest examples of this kind was furnished by the so-called 'meteorite of least.' which was only recently removed from a collection of which it was regarded as one of the most interesting specimens. Igast is a small town in Livonia, where, on May 17, 1855, a fall of meteorites is believed to have taken place. Numerous and trustworthy witnesses who had no interest in telling untraths about the matter gave a circumstantial account of the phenomenon. and produced a stone which, according to them, had fallen be-

SPHEROIDAL MASS OF CAST IRON MADE BY SCHWEINFURTH TO BE A METEORITE.

fore their very eyes, had cut off the branch of a tree. and had made a hole in the earth. A learned professor of the University of Dorpat, M. Grewinck, collected the fragments, analyzed them, distributed 'them among various museums. and was convinced of their comic origin. Nevertheless. in a recent investigation it has become certain that they are pieces of a kind of artificial scoria such as is formed in factory furnaces.

"I make no attempt to explain the illusion of the alleged witnesses of the fall, but I am certain that they were sincere. . . . In fact, not once, but twenty times-a hundred times-we have received at the Museum of Natural History news of stones fallen from the sky, which were found to be manifestly of terrestrial origin. Their owners, who often set great store by them and who, more than once, I must confess, carried them away without being convinced by our arguments, have belonged to all classes of society, and among them have been persons of good education and even some with habits of observation."

In explanation of the illusions regarding these stones, the writer says:

"A meteor crosses the heavens, explodes, and throws the beholder into astonishment often mingled with fear. He looks about him, and if his attention is attracted by some substance that looks different from the ordinary stones about it, he easily ersuades himself that it has really been part of the meteor. Most of these false meteorites are podules of iron pyrites; but pyrite shares the privilege of being taken from meteorites, with various other substances. Most of these are factory slags of various kinds. The collection in the Paris Museum includes all

sorts of vitreous substances. Many ferruginous substances also figure as pseudo-meteorites, sometimes picces or fragments of different minerals, sometimes bits of metal iron. Among the latter some few are natural, like the Greenland irons, which were long believed to be meteoritic. The majority, however, are industrial products, which date from some past age. The most curious of these is a cast-iron ball made by negroes, which weighs 1,250 grams 124 pounds] and derives its cluef interest from the fact that it was collected

ODILE OF PURITES, SUCH AS IS OFTEN TAKEN FOR A MELEORITE.

as a meteorite in 1898 by the celebrated traveler Schweinfurth, on the Lybian desert, near Fayum,"-Translation made for THE LATERARY DIGEST.

Effects of Music on Horses,-Horses are, of all animals, the most susceptible to the influence of music, we are told by M. Adolphe Guenon, who has just published a book on "The Influence of Music on Animals." "His experiments," says The National Druggist (December), "were conducted personally, the flute being the instrument used, and the horses experimented on were those of the regiment of cavalry to which he was attached. He states that the number found by him wholly indifferent to music was surprisingly low, not more than one in five (20 per cent.). The following excerpt from his work is most interesting:

"Those under the influence are visibly impressed, demonstrating their feelings by an attitude of attention, maintained throughout the entire performance. They swelled their chests, carried their heads higher, the ears flung forward and kept fixed in the direction of the sound. The line of the back was raised, and the tail carried as the the animal was moving instead of standing still. Some of them kept eyes upon the instrument from which the sounds emanated, as long as it was being played, while others stood immovable in front of their racks, as tho lost in contemplation, the fixedness of their ears showing that the animal did not desire to lose a single note of the pleasing sounds and that his whole attention is concentrated in the organs of hearing-a fact that should be compared with that 'contemplation by hearing' spoken of by Proudhon. We might say without exaggeration that these animals are charmed. It is easy to see that they are profoundly affected, and that the music moves them. The sensation is evidently not disagreeable, since they manifest neither inquietude nor impatlence." Right here is the most curious feature about the matter-the emotion that they feel, whatever it is, reacts powerfully on the bladder or intestines, or both."

#### ARE COLDS "CATCHING"?

W E all speak of "catching" cold, and the belief that an ordinary cold is "caught" in the same sense as an infectious disease and in no other way seems to be gaining ground among medical men. Dr. H. Willoughby Gardner writes in *The Lancet* (December 1st.)

"Colds are almost unknown in the Arctic circle, not on account of the action of the continuous cold, but because the greater part of that region is uninhabited. When Sir William Conway and his men were exploring Spitzbergen, tho they were exposed to great privations and were almost constantly wet through, they never caught a cold, but directly they came down to Andrée's settlement on the coast, where some forty men were living in almost constant intercourse with the mainland, they all developed violent colds. Nansen and his men never caught a cold during all the three years of his voyage, notwithstanding the utmost exposure, but directly they reached civilization on the coast of Norway, the still within the Arctic circle, they all suffered badly from colds. The weather is not always keen and bracing in the Arctic regions; during the summer time in Franz losef Land. at any rate, it is exceedingly damp, and raw mist-laden east winds prevail: yet the members of the Jackson-Harmsworth expedition never caught a cold there, tho all but two of them did so directly they reached civilization. More noteworthy still were Conway's experiences in the Himalayas. While amongst the mountains he and his men, notwithstanding great exposure, never caught colds: nor did they even when they visited the small remote native villages; but once they came down to a village where there was a small European settlement in communication with the outer world, and there they all took bad colds. Nor is it only the Arctic regions and amongst high mountains that colds are absent; the same immunity from them is noticeable during long sea-voyages and when camping out in the desert; and, still more unexpectedly, in the best open-air sanatoriums, such as Nordrach, where the ventilation is practically perfect, it is found that the patients do not catch cold. There is, I believe, plenty of other evidence to show that there are places remote from ordinary human life where colds can not be caught whatever the exposure; probably many of your readers can bring forward instances.

"On the other hand, that ordinary colds are in the highest degree infections is now becoming a matter of common knowledge, and any nedicid man if he goes about with open eyes can collect evidence for himself. I have watched a cold pass from house to house and have even traced it from one village to another, and have itsteach, not without some amusement, while the different sufferers from it have explained to me just how they caught it saverbing it to some open window, change of garment, or other fancied imprudence. I know houses where all the members of the bousehold, including visitors and children, are constantly catching colds, and they are not the airy or even the draughty houses, but stuffy, grimy, badly ventilated, and dark ones. No doubt it is possible to have an inflammation of the massI mucous membrane, as of the conjunctiva, from some simple irritant, but such an event is rare, whereas the ordinary infectious cold is by far the commonest of all diseases. Surely, therefore, it is impotant that its infectiousness should be frankly recognized.

# THE OLD OAKEN BUCKET-A HYGIENIC VIEW.

THE truths of science are not often expressed in verse, and this fact serves to emphasize the few instances where time has been employed to convey fact. The following parody on "The Old Oaken Bucket," which is not only amusing, but contains some valuable points in sanitation, is by Dr. J. C. Bayles, formerly president of the New York City health board, and was read by him at a meeting of the Academy of Medicine. We quote it from the columns of Engineering Years, which says that the sanitary science conveyed in the verses may seem elementary indeed to our readers, yet it needs but the slightest knowledge of conditions about the average farmhouse and country village to realize that millions of people are living amid just such unhealthful surroundings in entire ignorance that they have anything to do with causing disease and death." The parody is as follows:

With what anguish of finial I immember my childhood. Recalled in the light of a knowledge since gained. The malarious farm, the west fangue-grows wildwood, The child stem contracted that since have remained: The commonwered since yound, the page size (since by it, The child stem of the commonwered size is possible to the page size of the page size of the size of t

Just think of it! Moss on the vessel that lifted. The water I drank in the days called to mind; Fer I knew what professors and scientiste gifted. In the waters of welle by analysis find; The rotting wood fiber, the rott of from, The algo, the frog of unosmal size. The water, impure as the verses of Broon,

Are things I remember with tears in my eves.
And to set the and trust—but a builder to think of it—
I considered that water uncommonly dear,
And often at noon, when I went theret drink it,
I enjoyed it as much as I now enjoy beer.
Now ardent I seised it with hands that were grimy,
And quick to the much covered bottom it fell.
The work of the seised it with hands that were grimy,
And quick to the much covered bottom it fell.
With matter or examine I to see from the well-alloy
With matter or examine I to see from the well-alloy

Oh, had I but reatized in time to avoid them—
The dangers that lurked in that pestilent draft—
I'd have tested for organic germs and destroyed them—
With potassic permanganate ere I had quaffed.
Or perchance I'd have boffed it, and afterward strained it
Through filters of charcoal and gravel combined;
Or, after distilling, condensed, and regained it

How little I knew of the enterir fever Which lurked in the water I ventured to druk, But since I've become a devoted believer In the teachings of science, I shudder to think. And now, far removed from the scenes I'm describing, The story of warning to others I teil, As memory reverts to my vonthful imbiling And I gog at the thought of that horrible well,

In potable form, with its fith left behind.

And the old oaken bucket, the fungus-grown bucket— In fact, the slop bucket—that hing in the well.

THE late Affect Nobel, the inventure of dynamite, provided a fund out of which should be upd priested to pressess who are adjudged most eminent in various branches of science or in the cause of posce. #### THE RELIGIOUS WORLD.

# RELIGIOUS TENDENCIES DURING THE PAST YEAR.

I T has been said that prosperity is bad for religion, and the experience of the past year would seem to indicate that the saying is a true one. "With money making by the millions," observes the Boston Evening Transcript (December 28). "and given away by its makers by the millions, religion has suffered acutely, when compared either with some previous years or with interests without the churches." All of the three larger Baptist benevolest societies report a decline in financial income, and are compelled to look even more carefully than ever to new responsibilities. The Congregationalists can make no better report. The Episcopal missionary board faces a deficit of \$80,000, and the Lutheran have ladd to contract their work. The Presbyterian outlook, on the other hand, is more encouraging, and the Roman Catholics have lived up to their previous annual record of religious extension. Of Methodist activity The Transcript says:

"The singular exception to the rule that religious progress seems hardest in financially prosperous years are Methodists North and South. The raising of \$15,000,000 by the former and \$1,500,000 by the latter, a total of \$16,500,000, is the most gigantic thing of its kind any religious body, Protestant or Catholic, ever achieved. It is true that the raising of it has injured some other Methodist interests, notably the income of the Missionary Society, but allowing for the falling-off in that direction, and allowing also for some loss in other Methodist benevolences, it remains that Methodists have defied conditions, and, out of a body of communicants far less well-to-do than any others, have distauced all records at money raising. And to their credit, it would be nnjnst not to add, they have employed methods that are, in the main, unexceptionable, and they have raised the large sum in such manner as leaves Methodism in better mood for inrther giving than it ever was in before. Furthermore, the spiritual advantage to the denomination is already considerable in membership accessions, and indications point to even larger

The following table is given, showing the income during 1901 of the six principal Protestant bodies. "The figures show," says *The Transcrift*, "either that there has been a falling off of income or that barely old figures have been maintained":

Baptist	٠.																			,	\$12,575	,000
Congregat	lo	na	a l	١,,													 		d		7,350	,000
Episcopal.				٠.																	14,856	,000
Lutheran.	٠.			٠.																	8,100	
Methodist.		٠.			 ٠,	ĺ,	Ì,	Ì,	i,								 				18,951	,000
Presbyteri	aı	2										ı									16. 228	nnn.

The lack of more generous contributions for religious work does not seem to have been accompanied by a decline in church attendance. On the contrary, such attendance is reported quite up to the average and the proportion of men steadily increases. Evangelistic work, however, has made an unsatisfactory showing. The Transcript declares:

"The year 1901 being the opening of a new century, several interdenominational efforts were put forth for large accessions to the churches. Professional evangellsts, who have been going through a period of hard times during the last half-dozen years, swarmed out in vast numbers. Great spiritual revivals were planned, some of them with very ambitious names. The simultaneous missions of London and the English provinces were studied and patterned after. Enthusiasts spent thousands of dollars in literature. But the revival refused to come. In not one principal city was there anything like a spiritual awakening such as has often come in the same cities in previous years. Even Philadelphia was not aroused as it had been. The evangelists found nothing to do, and they are at present as employmentless as walking delegates since the recent appointment of the industrial department of the National Civic Federation. Accessions to church-membership averaged well during the year, but spiritual awakening of the sort sought there was none. And there are now few signs of any this winter. Evangelists have recently held a meeting, and have, for the sixth or seventh annual time, voted it necessary to find other employment pending further devolopments."

One of the most striking features in the religious work of 1901 was the advance of Protestant missionary effort in Cuba, Porto Rico, and the Philippines. There have also been some interesting ecclesiastical tendencies, of which The Transcript says:

"Among all religious bodies there is marked effort to give greater dignity to public worship. So well defined is this that Episcopalians, Lutherans, Moravians, and others with liturgies are fast losing their distinctiveness. Vested choirs have increased rapidly in number among Methodists and Lutherans. Churches built new have been far more ecclesiastical in architecture without and within than formerly. The week of prayer in January is giving way to observance of Holy Week, observed everywhere, and many churches keep Lent that never kept it before. Daily noon-hour services in husiness quarters, sometimes in halls, but oftener in down-town churches, are increasing in all cities. At the same time the advanced people have received during the year a distinct setback. This was shown most emphatically in the Episcopal convention in San Francisco in October. There the so-called 'Catholic' party cut practically no figure at all, and in many dioceses once strong, Catholics' are now either weak or have almost disappeared."

#### IS SOCIALISM ANTICHRISTIAN?

THE Pope's encyclical on Socialism last year, taken in conjunction with the increasing importance of the Social Democratic Party as a political factor in Germany and the prominent part played by the Socialists in the anticlerical legislation of France, gives constant interest to the whole question involved in the relation of Socialism to Christianity. In spite of the comparative weakness of the Socialist movement in this country, there are signs that this subject is deemed not unimportant even in the United States. Archbishop Corrigan's recent sermons against Socialism, in St. Patrick's Cathedral, New York, have been widely quoted and approved in the Roman Catholic press, The Archbishop took the ground that Socialism is fundamentally antichristian, and that its progress is fraught with danger to the Roman Catholic Church, "There is not a single leader among the Socialists who is a Christian," he said: "they are either agnostics or antichristian. Their maxim is not Christian. It simply tends to the development of material prosperity. Religion is left out of the Socialistic creed altogether." Against these sweeping statements a protest has been entered by Father McGrady, a Socialist priest of Bellevne, Ky., who, in the course of a "reply" to the Archbishop's attack, printed in the St. Louis Post-Disbatch, declares:

"The Archbishtop says that Socialism is antichristian in its spirit, and that the great leaders of Socialism are antichristian. To this it can be replied that the great leaders of science to-day are antichristian, but that does not make science antichristian. St. John Chrysostom, St. Ambrose, St. Basil, St. Gregory the Great, first Pope of the name: in fact, all the early fathers, together with Baron von Ketteler, Archbishop of Mamerce, denounced the right of private capital, and I presume that His Grace of New York would not call these heroes of the church antichristian.

"Under Socialism religion will conquer the globe, education will expand, and science will dazzle the world with its glittering sheen."

The Rev. R, Heber Newton writes a lengthy letter to the New York Times, (December 29) to sustain the same conclusion, contending that Socialism, in its broad lines, "aspires to a higher ethical order, a more truly spiritual order, a more essentially religious order," He continues:

"As for the leaders of Socialism being nearly all rationalists

and atheists, let it be confessed sadly that too many of them are such. But it may be much pondered by ecclesiastics whether the attitude of the Christian Church, as exemplified in the sermon of Archbishop Corrigan, is not largely responsible for the infidelity of Socialistic leaders. Surely, however, hosts of Socialistic are not infidels or atheists. Does the Archbishop know nothing of Christian Socialism, even within the bosom of the Catholic Church's

"If certain whispers which have come to my ears be correct, this sermon of the Archbishop is the sign of a preconcerted movement within the Catholic Church in our country against Socialism. For one, I trust devoutly that this is not the case. A stanch Protestant myself, I should grieve deeply to see the great Church of Rome arraying itself in a hostile attitude toward a movement having such moral ideals. In this case there will most likely be a great increase of 'rationalists and athesists.'

"For one, I am certain of the ultimate victory of the Socialistic ideal, it some nobler form of our industrial order—which may be very far from the Socialists' dream of the future state—just be very far from the Socialists' dream of the future state—just be cause I believe that the moral law is the heart of the nuiverse. that the power back of evolution is a power making for righteous-ness, that when God's will is done upon the earth it will do away with needless poverty and its sufferings and temptations. Therefore, for one, I grieve when an eminent prelate seems to not considered the seems of t

An interesting side-light is thrown on these views by a series of three articles on "Paganism and Christianity," from the pens of representative Socialists, that have recently appeared in the pages of The International Socialist Review (Chicago). "Julian." the first of the three writers, frankly confesses his belief that Socialism will sweep out of existence the "theological cobwebs" of Christianity. "Christianity," he says, has served its purpose as a social factor, Its precepts were designed for a society of masters and slaves, of rich and poor, and they contemplate the perpetuity of such a system. True Christianity would be impossible in a social system where none of the virtues of patience and submission on one side, and generosity and mercy on the other, could be practised." Under Socialism, adds Robert Rives La Monte, in a succeeding issue of The Review, equality of opportunity and the dominant sense of human solidarity would make brotherhood and fellowship the keynote of religion; and he thinks it by no means impossible that Christianity itself may come to be interpreted in these terms. "Is it a mere fanciful dream," he asks, "to look forward to the day when the most solemn rite of Christianity, the Holy Communion, shall be transformed into a banquet of brothers, ringing the globe in its embrace, joyously marking their sense of human oneness by this catholic feast of fellowship in honor of the Christ who first taught and lived the life of fellowship?" The Rev. J. Stitt Wilson, dissenting from the views of both of the writers quoted, thinks that Socialism makes a great mistake in "loading itself up with the unnecessary proposition that it is materialistic, atheistic, and antichristian." "Socialism," he says, "and all it will mean, is but a part of a greater whole; it is but part, in our time an allimportant part, of that complete meaning to human life which I either read out of, or read into, the life and teaching of lesus."

George D. Herron makes a contribution to the discussion in an article published in the London Social Democrat and Wilshire's Magazine (Toronto). He says:

"Jesus was not a Socialist, and he eame long before any scientific approach to society was possible; but he has left to the world a communistic spirit of matchless strength and masterly sweetness. The Socialist movement will receive this spirit and welcome this strength and power, while rejecting the traditions and authority of Christianity. Indeed, Socialism will have to be realized before the ideals of Jesus can be clearly discerned and considered.

"Socialism will have its religion, or rather it will become a religion. But it will be a religion of the manifest facts and forces of life. Out of the selected experiences of the race and the individual will the cooperative commonwealth appropriate what is best as its philosophy and practice of life. For, after all, religion is simply the interpretation of life; and we shall have a pure and undefilled religion when we have our common human life interpreted so that we may each cooperate with the best that is in it. It is out of the common labor and struggle of the world that the soul's integrity and freedom have really come, and not out of its religious systems. Life has always been that revival; and when we learn to freely look at life and trust it, we shall walk in that vision for which the prophets have sought.

#### RELIGIOUS LIFE AMONG THE NEGROES.

E RNEST HAMLIN ABBOTT, who recently undertook at the request of the New York Outlook an investigation into some unusual phases of religious life in America, has been studying religious tendencies among the negroes, with the purpose of discovering (1) in what direction the best in the negroes religious life is developing, and (2) what relation the Southern white people assume toward negro religion. In this quest, Mr. Abbott visited many Southern cities and churches, and talked with religious leaders of both races. He says:

"In the cities of the South the great mass of negroes flock together in huge churches which often number two or three thousand members each. The chief service on Sunday is held in the evening, when the colored people are free from their work, which is largely menial. Oue Sunday evening in Charleston, S. C., I attended service at one of these churches. The church was Methodist. The building was crowded. The congregation was singing a hymn as I entered. Beneath the quavering appoggiaturas that rose and fell at the pleasure of individuals in all parts of the congregation, like the suray from waves dashing over shoals, I recognized with difficulty an old familiar psalm tune. An aged 'mammy' in a pew ahead of me was swaying back and forth, with her eyes half closed. Here and there throughout the congregation others were swaying in the same rhythmic fashion. The hymn was ended; the excitement was only begun. On the platform were half a dozen negro ministers. One came forward and offered prayer. More and more fervent he became; more and more he pounded the pulpit. Inarticulate cries and shrieks rose from the pews. The prayer ended, then came the first of the collections; there were three before the end of the service. Another minister preached the sermon. He began colloquially, referring a great deal to himself. Then he urged certain moral precepts. Before long he was as wronght up as his audience; and finally, with hoarse and screaming voice, he described in imagination his progress across fordan, up the golden streets, straight to where in the center on one throne sat the Father, to his right on another sat the Son, and to the left on still another sat the Holy Ghost, whereupon, with a shout, 'I'm here at last,' he cast himself upon the very throne itself-not merely in imagination, for, amid the frenzy of the audience, he flung himself into one of the pulpit chairs with his legs crossed wildly in the air."

Against this picture, however, must be set another, in which Mr. Abbott portrays religious conditions in Tougaloo, Miss., the seat of a negro university. He declares:

"In that country community, where nill negroes ask of their Northern teachers assurance that the earth is not round in order to keep their faith in the Bible that speaks of the 'corners' of the earth,' where still many negroes, young and old, are strongly confirmed in their belief that before getting religion a person must feel the devil depart from some one or other definite part of his anatomy, where still a young negro man recently did not know it was wrong for his pastor to have two wives. I attended services in two colored churches, both Baptist. In each the service was perfectly orderly and devoid. The preacher in one church, with rich negro dialect, made a very thoughtful and applications of the services of the control of the services of the service

You with our daughters and our wives The colored to love one another, especially because they have no labels.

Labers, of close. The 'elder' was indicating from the experience of the man of Us that Christians were not free from the attacks of the "Attan."

The real Problem in negro religious development, observes the writer, her in the conversion of mere religious emotion, in many cases utterly unrelated to conduct, into serious religious feeling. and the most hopeful factor in working out this change is found in the younger negro element. "Almost all the negro churches." he says, "give evidence of two factors: one, the old-style darkey whose religion is of the hallelujah order; the other, the younger generation who are ashamed of these emotional outbreaks. The younger element is, of course, finally going to control." An attempt has been made by High Church Episcopalians and Roman Catholics to guide the religious emotions of the negro into worthier channels by means of elaborate services, with incense, lights, and music directed to moral ends; but Mr. Abbott thinks that these methods have attracted, in the main, the more ignorant negroes, and that a serious religious appeal exerts the most permanent and beneficial effect on negro character.

The attitude of Southern Christians toward the negro has already been fully treated in our pages feee The Literary Distr., November 30, and the testimony presented by Mr. Abbott is in harmony with the views quoted in that article. The relation is probably summed up in the statement of a lady who told him: "Moral brotherhood is recognized, but not equality; the relation of helper to helped, but not the relation of reciprocity." Except in the Catholic churches of the South, negroes very rarely worship in the same churches with the whites, tho in some cases the ante-bellum custom of reserving one gallery for colored people is maintained. Mr. Abbott comments:

"Whatever intimacy there has been in the past, between the races has been that growing out of the relation of servary are master. Wherever that relation has ceased the intimacy has a disappeared. As a consequence the significant improvements the religious life of the negroes is coming, like the rest of the kinglom of heaven, not with observation."

#### A SPIRITUALIST VIEW OF PRAYER.

A PROPOSAL to open Spiritualist conventions with prayer has aroused an interesting discussion on this subject in the Spiritualist Journals. One correspondent (writing to The Progressive Thinker, Chicago) strongly opposes the suggestion contending that prayer is utterly inconsistent with the philosophy of Spiritualism. Another writer to the same paper gives it as his opinion that "the omission of this spiritual and moral exercise has been one of the chief causes of weakness and inharmony in our gatherings, because prayer, rightly understood and practised, is the greatest source of moral and spiritual growth and strength—except it be the doing of good deeds. This conflict of opinion draws from Light (London) a statement as to what it considers should be the true attitude of Spiritualists toward prayer. It savs:

"Inovecation, rationally understood, is simply appeal, and a good Spiritualist should be the last to hesitate because the uppeal is to an unesen presence. The 'orthodox' Protestant Christian, or, for the matter of that, the orthodox Mohammedan, is conventionally bound by a supernatural view of prayer. God is regarded as the sole object of it, and, by multitudes, prayer, addressed to any other being, is a kind of blasphemy. But the well-instructed Spiritualist ought to be far beyond that artificial and bindering idea. Said Tempson:

Speak to him then for he hears, and spirit with spirit can meet— Closer is he than breathing, and nearer than hands and feet. . . , we think of 'God': but it ought not to be difficult if we think of teachers and friends who have received their great promotionand, indeed, we have often thought that othing would be more
appropriate at public gatherings of Spiritualists than trustful and
affectionate appeals to unseen helpers. It may be that we also
are too fast held by old notions of the limitation of the object of
prayer. But If, instead of thinking of God, we think of trusted
and beloved ones on the spirit-plane, every word of Tennyson's
lines would apply: and to 'speak to him' right be the most natlines would apply: and to 'speak to him' right be the most nat-

ural and the most blessel thing in the world.

"And yet, even so, it might be a thoroughly bad thing to ask for interpositions or interferences, and it is very doubtful whether it is right to ask for anything outside of mental, emotional, and spiritual blessings: the, as to this, judgment may rightly be suspended. But there surely can be no question that it can only be a good thing to ask for helpful spiritual influences, for a blending of sympathies, for an unfolding of graceous purposes and kindly thoughts, and we should have imagined that such an asking as that might have been highly appropriate and pontiable at the opening of a national convention of Spiritualists—or anywhere else."

#### WHAT IS BABISM?

I T is probably not generally known that the Bab religion has quite a number of disciples in this country, among whom must be included men and women of more than ordinary culture. The best known of the American Babists is Miss Sarah J. Farmer, of Greenare, Me., whose summer conferences for the study of comparative religion and economics have attracted representatives of many schools of thought. Mr. A. P. Dodge the founder of The New England Magazine, is also a Babist, and has recently published an exposition of his faith in book-form. He is the chairman of the Babist Society in New York, and is associated in this religious propaganda with Mr. W. Hooper Harris, the author of a newly issued book cutitled "Lessons on the Babia Revelation."

Babism can be best described as a reformed Mohammedanism, and its prophets include Adam, Noah, Abraham, Moses, Christ, Mohammed, and Behā'u'lláh. From an article by Mr. Kenneth R. Forbes in Mind (January) we condense the following account of the genesis of Babism:

"In the year 1844, one Ali Mohammad made his appearance in Persia as an independent religious and philosophic teacher. His exposition of the teachings of Mohammed was to the orthodox Mohammedan at least most novel and startling. He claimed to teach nothing new, but simply to restore to its original purity the teachings of the 'Prophet.' He called himself the 'Bab,' or 'Gate,' a forerunner of one greater than he-a prototype of John the Baptist, as it were. Six years after his death one of his foremost disciples. Behá'u'lláh, the 'Blessed Perfection,' declared himself to be 'him whom God should manifest," and was so recognized by the majority of the 'Babis.' For forty years he lived as the master and teacher of the 'Babis,' and was an object of the deepest veneration on the part of his disciples. In 1892 he died, and, according to a long existing understanding, his mantle of authority and leadership descended upon his son, Abbas Efendi, who is to-day living in Acre, Syria, the acknowledged 'Master' of all 'Babis,' whose numbers in Persia alone are now more than a million."

The leading tenets of the Babist faith are thus outlined .

"The Babist would have none forswear his own religion, but through the clearer revelations of the 'Blessed Perfection' understand the purity and inner meaning of that very religion, and eventually perceive the underlying unity of all religions. For this reason, the disciple of Behå "ullahl does not are to be called a Babist, a Behåtte, or a supporter of any 'ism,' but rather a 'believer' in the 'Persian Revelation.'

"Much in the utterances of Behá'u'lláh is in clear, unmistakable accord with New-Thought teachings. The idea of the indwelling and immanent God is plainly expressed in nearly all we have seen of his words. That the 'kingdom of heaven' is something to be attained here and now—that it is, in fact,

<sup>&</sup>quot;'Speak to Him,' says Tennyson: and it may be difficult if

'within'-is likewise evidently a fundamental principle among

"That God has 'made of one blood all nations of men for to dwell on all the face of the earth,' Behá'u'lláh has expressed very beautifully in his own words:

We desire but the good of the world and the happiness of nations; that all nations should become one in faith and all men as brothers; that the bonds of affection and noity between the sons of men should be strength-ened; that diversity of religion should cease, and differences of race be annuled. . . Let no man glory in this, that be loves his country; let him rather glory table, that he is one of the strength of the strength

It should be added that the "Babis" enjoy an enviable reputation for truth and honesty,—qualities which, according to the writer, are "conspicuously lacking in the man of the street in Persia."

#### "UNWRITTEN SAYINGS" OF CHRIST.

THE Gospels of the New Testament present but a scant account of the life of Jesus, and the Evangelists themselves
recognise this after. Luke begins the third Gospe with the statement that "many have taken in hand to set forth in order a declearation of those things which are most surely believed among
us"; and John's closing words declare that if an attempt were
made to chronicle all the doings of Christ, "even the world itself
could not contain the books that should be written." Writing on
this subject in The Independent, Prof. George II. Schodde, of
Columbus, O., asys:

"The accounts of what Jesus did and and were first orally and traditionally spread among the early Christians. Our written Gospels are comparatively late portions of the New-Testament literature, and on the whole are antedated by the Epistles, or many of them. 'I this for this reason that the New-Testament letrer, altho a commentary and interpretation of the facts not contained in the canonical Gospels, practically contain no direct these facts by the brieflest, from which has been given to these facts by the Evangelist.

It is only natural to believe that of the many sayings of Christ that were current in the early church, and were not used by the four Evangelists, not a few should have found their way into the writings of the church fathers. Indeed, it would be surprising if such remnants of the living traditions of the church could not be discovered in patristic literature. The existence of such non-canonical sayings of the Lord is all the more certain because one of them at least is found in the Scriptures themselves-namely, in Acts xx. 35, where these words are expressly ascribed to Christ, 'It is more blessed to give than to receive,' and yet these are nowhere found in the written gospel records. It is supposed by many scholars that there are quite a number of such 'agrapha,' or unwritten sayings of the Lord, scattered throughout the Acts and the Epistles, as these writers would naturally, if possible, give Christ's teachings in Christ's own words, only that the fact that these are direct quotations is not given, and these sayings can not accordingly be recognized.

"There are found, however, scattered throughout the earliest literature of the church a goodly number of sayings expression statishated to Christ, but not recorded by Matthew, Mark, Luke, or John, and modern scholars, notably Hilgenfeld, Zalan, Netan and Resch, have devoted close researches to their investigations."

From the work of the latest specialist in this line, Dr. Edwin Preusshen, the following "sayings" are selected, as being among those which are most likely to be authentic:

- I. "Therefore says the Lord: 'Whosoever is near to me is near to fire; whosoever is far from me is far from the Kingdom of God." (Found In Greek in Didymns on Ps. Ixxxviii. 8, and in a Latin translation in Orizen. Homily on Ier. xx. 3.)
- 2. "On the same day he saw a man working on the Sabbath day, and he said to him: 'O, man! if thou knowest what thou art doing, thou art blessed. But if thou dost not know this, thou art accursed and a transgressor of the law." (Codex Bezze to Luke vi. 4.
- 3. "Listen unto the Lord who says; 'Be concerned for faith

and hope, by which that love is born which is well disposed toward God and man, and which gives eternal life," (Marcarius, Hom. 37, 1.)

4. "He montions as an example: 'Ask for that which is great, for then that which is small will be given unto you, and ask for heavenly things, and you will receive also the earthly." (Origen, 'De Orat.,' ii. 2; xiv. 1. Cf. Clemens Alex. "Stromata," 1. 24, 158, and often.)

5. "Quite correctly the Scriptures desire as to use dialectics in this way, and therefore they demand this of us." Become experienced money changers, who are able to reject the false coins and keep only the genuine." (Clemens Alex. "Stormata."), a § 177. Cf. I Thess. Iv. 21; Origen on Matth. xvii. 31, and frequently.) This is probably the most popular of the "agrapha."

6. "Jesus therefore said: For the sake of the weak I became weak, and for the sake of the hungry I suffered hunger, and for the sake of the thirsty I experienced thirst." (Origen on Matt. viii 2.)

7. "If thou hast seen thy brother,' he said, 'thou hast seen thy God.'" (Clemens Alex. "Stromata," 1, 19, 94, and 2, 15, 70.)

8. "Again says the Lord: 'He who is wedded should not cast off his wife, and he who is not wedded should not marry."

(Clemens Alex. "Stromata," 3, 15, 19.)

9. "But our Lord replied to the Apostles, when they asked him what was to be thought of the Jewish prophets, who had formerly made predictions concerning him, and now were thought still to believe in his coming: "Ve have rejected the living relative, who was before you, find now you speak fables concerning the dead." (CI. Augustine, "Contra Adversarium," Ac., 2, 4, 12.

Among the best known of the "Logia" of Jesus are the following, found in the Oxyrhynchus Papyri by Grenfell and Hunt:

r. "And see carefully that thou remove the mote that is in thy brother's eye."

2. "Jesus said: 'If ye do not fast in reference to the world, ye shall not enter into the Kingdom of God; and if ye do not rest on the Sabbath day ye shall not see the Father.'

 "Jesus said: I stood in the midst of the world, and appeared to them in the flesh and found them all drunken, and found none among them who were thirsty. And my soul is perplexed concerning the children of men, because they are blind in their

hearts, and [do not look at their poverty].

4. "Jesus said: 'Wherever there are people . . . there I am with him. Lift up the stone, you will find me there; split the wood, and I am there.'

 "Jesus said: 'No prophet is welcome in his own country, and no physician tries to effect cures among bis own acquaintances."

6. "Jesus said: 'A city that is built on a high hill and is fortified can neither fall nor be hidden,"

In view of the many literary finds that are being made in Egypt from the New Testament and the apostolic era, concludes Professor Schodde, it is not at all impossible that additional "agrapha" may yet be discovered in goodly numbers.

#### RELIGIOUS NOTES.

In Association Men (January) is chronicled the work that has been done during the peat year by the Y. M. C. A. in cities, at railroad centers, in the United States army and navy, in colleges, and among the Indiana and negroes. Fifteen railroad and twenty-three city Association Buildings were declicated in rost, and over \$\$\frac{1}{2}\sigma\_{0,0,0,0,0}\$ was appen in Association Work.

THE London Tablet announces that the Pope has appointed a special postulical commission to consider all questions connected with Biblical studies. Cardinal Percecki, dean of the Sacred College, is president of the commission, and Cardinal Segua and Cardinal Versu and Cardinal Segua Segua and Cardinal Segua Segua

This successive election of Dr. George F. Moore, formerly of Andower Theological Seminary, and his brother, Edward C. Moore, a Congregational minister at Providence, R. I., both of them well-known orthodox works of the Congregation of the Congreg

#### FOREIGN TOPICS.

#### IS THE BRITISH WORKMAN A BOTCHER?

THE laziness, incompetence, and dishonesty of the British workman are ruining not only himself but the industry of his country, according to the London Times. This newspaper has caused actimonious debate throughout England by its series of editorials and special articles on what it terms a "crisis in British industry." We are told:

"A man who wants to do honest work is subjected to bullying and persecution; sometimes a foreman is compelled to dismiss a good workman because he is good, under penalty of seeing four of five hundred men refuse to work at all. Any man more capable or more willing than his fellows is a "seab" or a "blackleg" or something equally agreeable, and, if he persists in spite of or something equally agreeable, and, if he persists in spite of the fines, he is ejected from the union, and all the money he has paid in as a provision for old age or sickness is confiscated. It is a perfectly monstrous state of the law that permits this, if, indeed, the law does permit it."

The state of affairs in the bricklaying trade is instanced as follows, being deemed representative of prevailing conditions in all lines:

"Thirty years ago, our correspondent states, and we believe accurately, a bricklaper would lay 1,000 to 1,000 brieks in a bricklaper would lay 1,000 to 1,000 brieks in 64, ln America, we are given to understand, the figure is even higher. Now, by an unwritten but mercilessly enforced trade-union law, a man must not lay more than 9,00, and, if he works for the London County Council—that is to say, for the ratepayers—he must not lay more than 9,0. Our correspondent quotes a case of a building put up for the school board, in which the average output of the bricklayers was 70 bricks a day. Yet these are men receiving the highest current rate of wages, a rate very greatly in excess of what was paid when 1,000 bricks were laid per day."

English papers have taken the subject in hand very thoroughly. Here is the view of The Standard (London).

"There is no doubt of the extraordinary success with which the American Iron and steel nanufacturers are pushing us, not merely in neutral markets, but in those that may be called our own. In meahinery, in tools of all kinds, in locomotives, rail-way bridges, and constructional work, the competition is constantly growing more formidable. Nor are the reasons for this Transatlantic success a mystery. Any number of competent observers have recently examined the fact, and drawn the obvious moral. The American workman is better paid than our own, but he is worth the money. He works with greater steadiness and superior latelligence, and his trade-unions have not yet put. On the contrary, everybody is in the United States labors with an earnestness that seems almost ferocious to the stranger from more leisured lands."

"In the case of the boiler-makers there is seen the old familiar resentment of new tools and machines such as are now universal in the United States," declares The Outlook (London), while The Daily Mail (London) quotes from a union man's eard an order reading: "You are strictly cautioned not to outstep or rules by doing double the work you are required, and causing others to do the same, in order to gain a smile from your master." To which The Daily News (London) retorts:

"This is a foolish and a wicked rule, and reveals a policy as dangerous to the best interests of the country as it is shortsighted from the point of view of the men. It has been published by the correspondent as an operative rule of a union still in existence. But our special correspondent gives us the assurance that it haves been dug out from a code of rules of a local builders' laborate union in Yorkshire which has been defunct for more than thirty years. Assuming this to be the case, and that the rule belongs to the days when, regarded by the law as 'criminal conspiracies, 'unions moved in secrecy, the public will know how to estimate at its true value an attack dependent in any degree upon such evidence."

Nor is this paper alone in defending the character of the British workman. *The Spectator* (London) thus concludes a friendly criticism:

"The way to bring the workmen to a better understanding of their own class interest is to convince them of the economical fallacy which underlies their present policy. Tho that process may be long, we believe that in the end it will do its work. What is most certain to stand in the way is the refusal to see that the error of the trade-unions is economical, not moral, Their desire to limit the amount of work done in a day is not the offspring of a love of idleness for idleness' sake. They want to keep as many as possible of their members employed, and they think that the way to do this will be to spread the work that has to be done over the largest number of workers. The means they take to secure their end are not the right ones; they will only prevent, so far as they have any influence, the natural development of the industry which is unfortunate enough to be subject to them. But the end itself is not an ignoble oue, and we must frankly recognize this fact if we hope to get a hearing on the economical aspect of the question."

#### LORD ROSEBERY'S "GREAT" SPEECH.

A LL England awaited with unusual interest the long heralded Chesterfield speech of Lord Rosebery. The newspapers were much inconvenienced in reporting it owing to a storm while blew down the wires all over England. Lord Rosebery touched at length upon every important phase of the preent political situation in Great Britain, his words being thus summarized by The Standard (London):

"In a speech which occupied two hours, he said his policy at home was to restore efficiency to Parliament, Administration, and the people. Abroad, he would seek to dispel the atmosphere of suspicion and hatred which had grown up under the present Government, and to restore things to the footing on which they were when the Liberal Government left office in 1895. He believed in the stern, efficient, vigorous prosecution of the war to its natural end, and he believed that its natural end was a regular peace and a regular settlement. Therefore, he should not be deaf to any overtures of peace that came from any responsible authority. If the Government that was now in Europethat scattered and dejected ministry-could make any overtures of peace, directly or indirectly, to his Majesty's Government, if he were minister, he should not turn a deaf ear to them. He would grant just and most liberal terms, always excepting the closed and sealed question of jucorporation. The Boers must know as well as any one that their independence was gone forever. If by any chance they deceived themselves upon this mateter, and built on the foundation-the very crazy foundation-of a handful of men in this country who might hold out hopes that independence would be restored, they were a much less shrewd people than he took them for. The views he had expressed represented the best advice he could give, and what he could do to further it he would do. His services were, as they had always been, at the disposal of the country. He was aware his policy did not run on party lines, but it was not to party that he appealed. He appealed to the tribunal of public opinion and common sense

Every imaginable criticism has been voiced in the English press, but opinion seems agreed that the value of the speech was academic rather than practical. Says the London Times:

"While we do not by any means agree in everything which Lord Rosebery has said, either in criticism of the present administration or in forecasting the future of domestic politics, or indeed in all the details of his policy for ending the war, his advices to the party he led a few years ago comes, we must acknowledge, as a wholesome breath of fresh air. It is in striking contrast to the commonplaces of ministerial apologists and of oppositionist trimmers, even leaving out of account he' handful, as Lord Rosebery calls them, of pro-Boers who still hold out the hope of independence to the obleptics of their disastrous partonages.

The Liberal party has to regain its unity and, what is more, to regain the confidence of the country before it can again become an effective force in national politics. The advice which Lord Rosebery offered his former colleagues and followers a few mouths ago has been emphasized, as we pointed out yesterday, by recent events. He looks with hope to the fact that the Liberals are now freed altogether from the Irish alliance and its consequences, for the excellent reason that the Nationalists have repudiated insultingly any association with Liberalism and have openly ranged themselves with our enemies in the field. . . . The new Liberalism must be adapted to the ideas and the conditions of the present day and not to those of ten years ago, and, above all, those who propose to restore the party to its former influence must, Lord Rosebery emphatically urged, bear in mind President Roosevelt's warning, and, while they keep their eyes fixed on the stars, must remember that their feet are on the ground."

The tone of praise in these comments is echoed in the editorial columns of The Pairly Mail (London) and The Morning Leader (London), the latter a Liberal paper, and the former more or less independent. The Conservative Morning Pail (London) and the Liberal Dairly Chronicle (London) are also a unit in praise of the speech, altho neutral as to its declarations of policy. But the Conservative Standard (London) says: "Lord Rosebery had better go back to his lonely furrow or his cabbage garden. There is no place for him in serious politics." The provincial papers throughout England are more partiasan, the Liberal sheets praising the speech and the Conservative ones condemning it. Thus the Conservative Yest-khire Pail:

"Lord Rosebery remains, in the words of The Spectator, merely' a brilliant man who comments." It is not by men of this kind that the work of the world is done, and notil Lord Rosebery proves his capacity as a man of action and submits himself to analysis and the test of events as a practical leader and administrator harmessed to definite responsibilities, he may enjoy the admiration of the crowd for his brilliancy as a wit, but he will never acquire the confidence of that portion of the nation

THE CHESTERFIELD DANLEY.

LORD R-S-B-RY (in leading rôle):

"The 'Party's' out of joint: O, cursed spite, That ever I was 'asked' to set it right!" with whom statesmanship means the capacity to manage the solid interests of the country."

On the continent of Europe the speech has elicited sparing comment. The Neurst Nairchiene (Berlin) says the effect of Rosebery's words must be left to time. The National Zeitung (Berlin) says the Englishman might as well have undertaken to square the circle. The Kreuz Zeitung (Berlin) pariases the utterance highly, noting that it condemns Chamberlain. The Vessitake Zeitung (Berlin) calls Rosebery England's coming man. The Neue Freie Presse notes that the English ex-Premier severs all connection with Irish home rule. The Journal des Dibats (Paris) sees nothing very practical in the speech, and the Temps (Paris) deems it "intangible,"—Translations made for The Luteraky Dibats.

#### CHILE'S DISPUTE WITH ARGENTINA.

The strained relations between Chile and Argentina have of this country, possibly because Great Britain will arbitrate the difficulty. The Argentine commissioner in London thus sums up the trouble in the London Times:

"Argentina and Chile have a boundary dispute as to the fromtier at the sammit of the main claus of the Covilliera. Differences have arisen between the Chilean commissioners and myself, and the question is now under arbitration of his Britannic Majesty since 1858, both countries having agreed, in that year, and again in 1900, to maintain the strates year till the arbitrator gives his award. Chile has, however, several times broken this engagement, and has lately made roads along the bank of the rivers flowing from the east of the Cordillera of the Andes, cutting it, toward the Pacific, constructed tunnels, large bridges, and built houses for the purpose of trade and settlements, among others; and all this at the east of the snowy summit claimed as the houndary line by Argentina, and approaching the Argentine settlements which Chile claims now as its territory."

This has drawn from the Chilean boundary commissioner in London a protest to The Times, in which he says:

"It is an incorrect statement of the question to say that 'Argentina and Chile have a boundary dispute as to the frontier at the

CARTOON VIEWS OF LORD ROSEBERY'S SPEECH.

summin of the main chain of the Cordillera, 'as Dr. Moreno puts it. He hides out of view the fact that the fronter line is defining in two boundary treaties by the principle of demarcation of the water-divide, in virtuo of which Chub has persistently, and claim to the whole of the valleys draining into the Pacific."

The newspapers of the Argentine republic have for some weeks been denouncing Chile's attitude. The Nation (Ruenos Ayres), the organ of the partost and publicis General Mitre, says the situation is "serious" for the reason that Chile will not modify her demands in accordance with the proposals of the Argentine Government. The Tribura, a newspaper in Buenos Ayres which is said to reflect the personal views of President Roca, declarers:

"In view of the claims and conferences that have formed part of the proceedings almost up to this present hour, and of the allegations and suspicions that Argentina contemplated an invasion of the disputed territory, it is not to be tolerated that the Chieans exercise rights of sovereight by constructing dams and fortifications in the disputed territory, and that, too, by sealth, The thing is unparalleled. This country hopes that Chie's usurpation will not delay a full and fair solution of the trouble."

To this the Lei (Santiago) replies that the Argentine insistence upon Chile's "duplicity" aggravates the situation. Says the Chilean orgau.

"The enemies of Chile actively prosecute this work of making her out a nation of conquest and vaisigbory. It is preclaimed in Europe and Amorica that we refuse to dwell in peace with our good and innocent neighbors. Agnestina, Peru, and Bolivia. . . . It is said we have stolen into the disputed territory and made roads, dams, and bridges there. . . But our purpose and our point of view are misrepresented. We should have in London, where the dispute is to be arbitrated, in New York, Paris, Belliu, and Rome, capable and trustworthy ngents to outwit the proposandists of Peru and Argentina."

There are certain interests which seek to minimize the dispute, The Chilean Times (Valparaiso) saying:

HARD TO BRING THEM ALL UNDER ONE HAT.

-Kladdersida(sch (Berlin),

"The three months' talkee-talkee in secret has not affected, for better of for worse, the relations between the Chilean and he Argentine governments. The cordial nature of these relationshes not been daysuted in the least. Nor have the arbitronian proceedings been affected in any way. They have neither been accelerated nor retarded by the three-month's ponderous discussion with closed doors. They are following their natural course, and it may be taken for granted that they will continue to follow this course to the end of the chapter, undisturbed by any discussions that may be started for political ends in the Congress or in the press of either of the two countries which are parties to the treaty of arbitration."

The trouble is complicated by the Mouroe Doctrine, according

to the Temps (Paris), while the Liberte (Paris) asserts that the United States has much to gain by fomenting a war, —Translations made for The Literary Digest,

#### THE WOLF SCANDAL IN AUSTRIA.

"HERR WOLF, the noisiest of the Pan-Germans, has resigned his sear in the Reichstraft and the Lower Austrian Landtag, and modertakon not to reenter political hie. His downfall resembles that of Parnell, only its circumstances are said to be a good deal worse." In these terms the London Pilat refers to the thunderbolt of scandial that has been discharged into the Austrian political turnoil. "The circumstances which have led to Herr Wolf's retirement, according to The Duilty News (London), "itsed not be dwelt on." It proceeds:

"It is enough to say that they involved him in a duel—a bloodless one—three days ago, with Herr Seidel, a professor at an agricultural college in the provinces, and that Herr Seidel's wife is the daughter of Herr Techan, one of Herr Wolf's most faithful supporters. Herr Wolf is bimself married. His foremost position in the Reichsrath, as well as his attitude on certain questions, made it imperative that he should resign. His departure will not greatly perturb the Government, for whom ho had use been a sharp thorn in the flesh. He will be succeeded in the leadership of the party by Herr Sebönerer."

The purely spectacular features of the case make a powerful appeal to the editorial sensibilities of the Frankfurter Zeitung, which permits itself to say:

"Timo was barely afforded to consider the purely political side of this affair. Eager curiosity had first to gratify itself upon the entiting personal circumstances. From the fatal love-affair which constituted the groundwork of this sensation, to that last dramatic scene in which George Schönerer, guardian of Pan-German club morals, thrust the sinner out of Paradisc, everything was set off in variegated colors."

Herr Wolf's own organ, the Ostdewtsche Rundschau, which the fallen political leader now edits himself, merely announces his resignation, no comment whatever being added. The Transenance Tecturg, a Pan-German organ, is warmly on the side of Herr Wolf, remarking:

"Where honor is involved. Representative Woff is more sensitive than other people. Indeed, it might be said that he is too sensitive. He resigned his seat, a thing that in similar circumstances would not have been done by any member of the other political groups. The step will not meet with the approval of his constituents. If Woff really cred, in that he involved himself in forbidden, gallant relations with the wife of another, he at least gave the satisfaction that was demanded of him. He was ready to atome for the injury he did his friend. It is possible, conjured up that which had no existence. But it is an extraordinary notion that the matter has not been finally settled simply because the duel was a bloodless one."

That the Pan-German organization will remain true to Wolf seems to be the opinion of the New Frete Presse (Vienna), The Krewz Zeitung (Berlin) is impressed by the aggravating effect of the seandal upon the confusion already rampant in Austria's parliamentary crisis.—Frantlations made for The LIFERARY DIGEST.

Sienklewicz and the Pollah School Children.—
The illustrious author of "(no Vadis," as a Ineady noted in these columns, recently addressed to a newspaper of Cracow an impassionel letter in which be denounced in no measured terms the interdiction of religious instruction in the Polish language in the schools of German Poland. A translation of this letter has been published by the Echair (Paris). Stenklewicz cites this judge of the Color of the Polish and policy has been published by the Color of the Polished Schools of German Poland. A translation of policy has been published by the Polished Color of the Polished Schools of the Polished Polished Schools of the Polished S

hypocrisy!" Sienkiewics adds: "This opinion is not that of foreigners alone; it is equally that of independent German historians. There is therefore nothing astonishing that such a condition of things should have brought about a perverting of the mental faculties and a degeneracy in the feelings of justice and truth; in short, the total disappearance of all moral sense, and that, in the general debasement, the school should become a place of torture, and the courts of justice, in their cowardice, blind instruments of ferocious instincts and brutal power, Sienkiewicz, according to the Figure, asks that a public subscription be opened for the benefit of all those who have been sentenced to imprisonment, and thus reduced to abject poverty, and especially of the children, who, deprived of their parents, are left with no means of support. "If to have compassion for children," concludes the celebrated writer, "is enjoined upon all by the divine law, the Christian law, what is then our duty with regard to children in the condition of these? I herewith send the sum of two hundred crowns with which to buy food for the victims."- Translation made for THE LITERARY DIGEST.

#### EUROPE ON THE SCHLEY CASE.

GENERAL interest in the Schley case has been aroused in Europe, according to the Fremdenblatt (Vienna), which terms the affair "an intrigue on the part of Sampson's many hangers-on, he himself not being well disposed toward Schley either. The weaker party had to suffer in his reputation, his very seamanship being impugned in the conspiracy to sacrifice him to another." And the Franklutet Zeilung says:

"In a talk with Sampson, Schley said there was glory enough for all, and, modifying his own first report, he prepared a sead report in which he made it appear that his commanding officer's ship had been within hailing distance of the fight and in position to influence the action of the opposed ships. This report went to the Navy Department and figured in the proceedings. Made Schley acted less nobly toward his opponent and had he held to his original report, he would not have been the object of the spicious and calumnies that for two years past have made life a burden to hin."

The finding of the court of inquiry probably settled nothing of importance and may only embitter the controversy, in the opinion of *The Standard* (London), which concludes thus:

"A new inquiry by Congress is talked of, but we trust it will be avoided. Even the advantage to be gained by uncovering the bureau intrigue that is supposed to have cansed all the bitterness would not compensate for the waste of time and exacerbation of temper sure to be caused by proceedings in Congress. Our own history supplies an example of what it would mean in the parliamentary inquiry into the conduct of Admiral Mathews in the battle of Toulou in 1744. It is not a precedent to be followed. Silence or trial before a competent tribunal are the alternatives between which choice ought to be made. As the engagement at Santiago was fully successful, the former might very well be preferred. It is certainly a pity, both for the United States navy and the good name of the American people, that the credit gained in the battle has been dimmed by this angry squabble, and the revelation which it has made of the personal rivalries that form the seamy side of the war."

#### NAPLES, NEW YORK, AND CHICAGO.

WHILE the municipal corruption of Naples pales into insignificance in comparison with that of New York, according to a recent article in the Tribuna (Rome), the city of New York is as white as snow when viewed beside Chicago. The accounts in the New York papers of the Sardor report, and the municipal elections resulting in the overthrow of the Camora, "the Tammany of Naples" (see Tus Litzaxy Dioxx, December 28), has inspired in the same paper a vigorous defense of the Oueno of the Mediterranean.

"In this beautiful city exists no colossal trust, such as remains unpunished in avowed and shameless corruption, squandering economic resources in a great metropolis of three millions and a half of inhabitants for the benefit of a band of robbers, numbering thousands of wretched electors whose only object in belonging to it is to pocket a few dollars in return for casting their votes for Tammany's candidate. No, a hundred times, no! The worst men in Naples—and this embraces only a few daring individuals who succeed in imposing, under the protection of the government, upon the too credulous masses—the worst men in Naples, I repeat, are honest in comparison with the thieves of North America."

But the writer does not find Tammany Hall to be the only evil existing in New York : the condition of the police and the administration of justice are such that if he were to report the details of their corruption he would not be believed. He therefore refers the reader to William Stead, and lest the latter, too, be open to the charge of exaggeration and prejudice, to The North American Review. The administration of Chicago, he relates, is known to Europe through the celebrated publication of Stead : "If Christ came to Chicago." The worst scaudals known in Italy would only provoke a smile in this city of wickedness and corruption; and, more than this, New York and Chicago are by no means exceptions in the United States. This the Italian writer attributes to the vesting of power and anthority in the mayor rather than in the council. In short, he finds Naples infinitely better than New York, Chicago, or any other large city of North America. He notes, however, one good point :

"But the great republic remains a long way superior to us in one respect of capital importance: in the perfect liberty of speech and the press. . . Dana, Durand, Stead, Frank Moss, and a thousand others are able to denounce the general baseness, actual or threatened, without running the risk of spending a year in prison. In the United States, private individuals make and publish the official investigations; in Italy, the truth may be published with impurity only when princed in an authorized resulting to nucle as a comma of the official word!"—Tr antifation made for TRs. LITERAY DIGEST.

#### POINTS OF VIEW.

THE POPE EMBARMAND.—The political and social agitation styling its self "Christian Democracy," and now spreading in resolutental Europe, has recently been deprecated by the Valican organ Oiseraster Roman (Rome). The earl of these democrats, asys the pean in everpaper, leads them too far. Bits the fault is not their, according to the Journal der Defets (Paris), which asserts that the Valcant Intell give the movement impetus. "Now if prepared to bold the reins, whereas the youthful steeds cause confusion in the Catholic camps."

THE ROSES AND LINCOLS—The earlier period of our Civil War and the present continuin in Regliels counties regarding the Boars are said, it has deen organs of the opposition, to afford a striking pistallet. The assertion is made that Lincoln interfered in first with the Using operation and caused in the control interfered in first with the Using operation and caused the Register of the Commanders. The Speciator (London) denies the fact and secont the interest. The Twares (London) grantedly alliandes to "the points of re-semblance between a certain stage of the American (Vil War and an analogous one in that which is now being slowly forced toward a termination of the control of the Commanders of the Commande

## NOTABLE BOOKS OF THE DAY.

#### A BOOK OF CONTRADICTIONS.

THE DIRATAMLE LAND. By Arthur Colton. Cloth, 12mo, 312 pp. Price, \$1.50. Harper & Brothers

R. ARTHUR COLTON'S work has two qualities which should give him an appeal to two very different audiences. There is the charm of a rare style that should insure him nutice from the few, and there is a certain human quality that should make his work interesting to the many. Altho he had published only one book

ARTHUR COLTON

before this fall, and that a book of short stories, he had already gained a little mche for himself, apart from the ordinary ruck of the younger generation of writers. He seemed to have all the qualities that go to make books of the highest class : a point of view of his own, a whimsical sense of humor that struck very deep, and last (what one so seldom finds in the books of the day that one forgets to look for it), style-a use of the English tongue that is melodious and unusual. When it was announced that Mr.

Colton would contribute to the twelve American novels series, published by Harner's, readers of his former work wondered if this writer of attractive short stories would be able to carry on through a novel the qualities of his other work.

"The Debatable Land" is a bewildering book. One seems to see in it an author in the making. A thousand different qualities and ten-dencies struggle with each other and quarrel and shrick through every page. The book opens with a few pages that are so full of melody, such a graceful bit of writing, that one exclaims to oneself: "Here at last is a great book." Then comes a discord, and throughout to the end of this very debatable story the strife between good and bad continues: artificial machine-made dialogs; descriptions that verge on perfection; sudden glimpses into the souls of the little personages of the story whom a moment before one had dismissed as marionettes: agracefully turned aphorism followed by an Immature cynicism; an a picture of a battle that is like a gloot battle, a picture as liuseis; as a symbolist's painting, a battle seen as by a man whose mind is beary with fever, and who still has a agift of language. Yet unreal as this battle seems, mechanical as are the other parts of the description of warrise dongs, the feeling of waterines thouse. The comparison of the compa a gracefully turned aphorism followed by an immature cynicism; and

#### IN HIS PROPER COUNTRY.

THE PIMEBRAND. By S. R. Crockett. Cloth, 51, x 74, in., 316 pp. Price \$1.50. McClare, Phillips & Co.

ROM the days when Lord Douglas, on his pilgimage to Jerusalem, where he was to deposit the heart of the Bruce, turned aside to take part in a little shindy with the Moors in Spain, that land of romance and adventure has possessed peculiar fascination for men of the roving Scottish blood. It is little wonder, therefore, to find the

S. R. CROCKETT.

ground for their display. The author has well chosen for the time of his action the period of the first Carlist rebellion in Spain, tho. unfortunately, it is not until late in the story that the historical setting is rendered clear to the mind of the reader. It is on page 245 that we are told for the first time of the reason

"new Scott," as Mr. S. R. Crockett

has been called in his latest capacity

as historical novelist, turning up with

all the stock characters and acces-

sories of his trade in the country

which forms the most fitting back-

for the civil conflict. Two great Carlist leaders, Tomas Zumalacarregui and Ramon Cabrera, operating in their native mountains, had inflicted defeat on every Cristino

general sent against them. It is here that Crockett brings his own particular puppets upon the stage of action. First we have an outlaw "El Sarria," who has been led to think that his

wife has deceived him. He has, he supposes, assassinated her supposed lover, and slain, he also supposes, his own supposed friend, whom he had suspected of betraying him. One would imagine that there is opportunity enough in the resolving of all these unsettled points to satisfy any ordinary writer; but Crockett has the standard set by the great Sir Walter before his mind, as well as that of the treator of Othello. So he introduces the titular hero, "Rollo Blair of Blair Castle in the shire of Fife," known as " The Firebrand," who has come with his good sword "Killiecrankie" to carve his way to fame and fortune in wardistracted Spain. With two companions, John Mortimer, a broad cari-cature in the French manner of the English merchant, and M. Etienne de Saint Pierre, one of those impossible Frenchinen who are never found outside of British novels, "The Firebrand" joins the outlaw, El

found outside of British novels. "The Friebrand" joins the outlaw, its Survia, in an expedition to istuding the Queen Region and her daughter, Survia, in an expedition to istuding the Queen Region of the Region o

#### THE COURSE OF EMPIRE.

A SHORT HISTORY OF THE MISSISSIPPI VALLEY. He lames K. Houmer Ph.11., Ll., D., Member of the Minnesota Historical Society, Author of Biographies of Young Sir Henry Vane, Samuel Adams, and Thomas Hutchinson. Cloth, 5 x 2 1/2 in., 230 pp., illustrated, Price, \$1.20 net. Houghton, Mifflin & Co.

DROFESSOR HOSMER, whose studies in American history have won a conspicuous place in the national literature, brings to his present task a notable fitness and equipment. He has spent most of his life in or on the border of the region he describes, and his memory is charged with the events that mark its development, from the administration of Van Buren to that of Roose-

TAMES K. HOSMER

velt. He has traversed the great basin from the mouth of the river to northern Minnesota, and has had informing experience of the aboriginal peoples, as well as of the races which have displaced them. The book is timely. The centenary of the Louisiana purchase is at hand, and the Mississippi Valley is about to become politically complete, the last unorganized fragment of its area being about to receive (it is supposed) a formal constitution Starting from the prehistoric val-

ley, the author considers briefly the antiquity of man in that vast basin. the primitive aboriginal life, the "long house," and the clan, sachems

and chiefs and councils, communal customs, totems and wampums-and

the Mound-builders. Then come the Spaniards-Pineda and Narvaez and Esteraneco ("Little Steve"), the first negro to find a foothold in a region where the two races were to dwell together in a conjunction so fateful to both; and Coronado, sagacious and intrepid pioneer; and finally the disaster of De Soto, and the exhaustion of the colonizing energy of Spain.

Mr. Hosmer's relation of the advance of the French from the north is marked by conditions and incidents eminently picturesque and dramatic. It is the romance of Jean Nicolet, and Marquette, and La Salle, of the discovery of the Ohio and the naming of Louisiana, and the founding, by Iberville, of New Orleans

And then the inevitable-the advance of the Anglo-Saxon from the east, Walker at Cumberland Gap, the defeat of Braddock, the seigure of the Ohio Valley, the cession by France to Spain of western Louisiana and New Orleans; and, later on, the Revolution in the Mississippi Valley, the evolution of Daniel Boone and George Rogers Clarke, the partent of the school and the camp-meeting.

It is then not long to 1803, when the First Consul, grasping at imperial It is then not long to look, when the #1944-OHMM, grasping at impersal supremay, resolved to sell. Louisiant to the Americans, in order to strengthen the hands of a power sinced vocumisationed to challed area of the United States. Such an accession had never been contem-plated, and was even regarded with embarrassment and alarm. With unexampled rapidity all that teering region has been occupied

and held by a robust and resolute race, alert and vigorous. "It is reasonable to say," says Mr. Hosmer, "that the great West, the America sonable to say," says Mr. Hosmer, "that the great West, the America beyond the Mississipph, is the creature of the locomotive." What ships did for old Greece, railroads have done for the later state; and in the management of their complex machinery, the control of their intricate affairs, a higher type of man has been demanded, and developed—a man more judicious, vigitant, latert, circumspect, resourceful, punctual, man more judicious, vigila

#### IN BOHEMIA'S HAUNTS.

UNDER THE SKYLIGHTS. By Henry B. Puller. Cloth, eV x eV m., 182 pp. Price, \$1.50. D. Appleton & Co

HERE is a gust of Western ozone in this work by an author who established his reputation by "The Chevalier of Pensieri-Vani" and "The Cliff Dwellers." In this book he gives a vigorous picture of art and the Bohemian atmosphere in which its devotees

exist "Under the Skylights" of studios in an unnamed Western elty. There are two long stories and one short one, of which " Little O'Grady

Dr. The Grindstone " is very much the best. In the first story, "The Downfall

MENNY B. PHILIPS.

mor and conscious poise suggest Henry James, slightly occidentalized. This crude, worthy Abner Joyce drifts into the city with a raw antagonism to "Society," clubs, liquid stimulants, and the "Unearned Increment," and soon gets in touch with a Bobemian set who practise art. His downfall under the blighting amenities of "Society" and love are conscientiously portrayed. His marriage to Medora Giles, sister of one of the Bohemian artists, finishes him quite as a rectifier of world evils.

Little O'Grady, in the second story, is delicious. He works in plastine and bubbles over with fierce enthusiasm for his betters' work. He tian, and bubbles over with ferce enthusiasm for his betters' work. He saistes all the time with the most human Celtie emotionality. The saistes all the time with the most human Celtie emotionality. The ties for the decorative artist. How the hopes of the "Bunnies" are stirred; how they are miserably blasted by Phillistime consideration; a directors and delivers a huge piece of his incalescent mind to them, the saister of the saister of

The last story is on the lower plane of extravagant satire on Art. A country bumpkin reads something about painting by a clerical dilettante, Dr. Gowdy, and forthwith devotes himself to making portraits of the squash! from which he derives much fame and coin.

Fuller's humor is quite his own. Like Henry James's, it "smells a lamp," but his causticity is more robust. He knows human naof the lamp," but his causticity is more robust. He is ture, and his character drawing has free but just lines.

#### HOW THE OTHER HALF ENDURES.

A GENTLEWOMAN OF THE SLUMS. By Annie Wakeman Being the Autobiography of an Old Woman as Chronicled by Annie Wakeman. Cloth, 12010, 201 pp. Price, \$1.50. L. C. Page & Co.

"HIS book with its tawdry binding and its unfortunate name is a remarkable book. It is not literature, it is a piece of life. It represents the point of view of a certain class of people who live in the slums, in a way that almost no other book has done before this. Most books that deal with the somber lives of women of the lower classes, especially those women who have a certain refinement of nature, and through one reason or another have been brought to desperate want, have been written through the author's personality. Take "Esther Waters," for instance, a book very real and terrible, but terrible with malice aforethought. There is a voluntary bleakness in the manner in which Mr. Moore tells us of Esther's forlorn wanderings from place to place. The reader's soul is wrung with fear and pity, as the author intended it should be ; and so in almost all similar tales, brutality is piled on brutality and suffering on suffering. "Go to," says the author, "now I will show how awful is the life of the very In the "Gentlewoman of the Slums" there is no such attempt made to present a gloomy picture. The reader sees the life of the pour from the other side of the fence, that is to say, from the point of view from the other size of the fence, that is to say, from the point of view of the poor themservers. The story is quite mininged by the personality told the story of her life to the author, who had then made a little transcription of it. There is no attempt at a plot or a dramatic characteristic of it. There is no attempt at a plot or a dramatic characteristic of the story of the life to the author who had been also details, and the author even has the tenerity to let her indole; in the persons of her class, in the phrases that are true enough to life but

that border periously near the "goody-good" of the Sundayschold, book. Betty blobbs has suffered all and more than Estler Waters, but the utter absence of any spirit of revolt on the part of Betty is that marks this book as entirely different from all other dealing is that marks this book as entirely different from all other dealing is that marks this book as controlled to the property of the book. There is not enough shudder to it. The harrowing details "are told so simply that one hardly notices how harrowing they are.

#### LIFE IN THE GHETTO.

IDVLS OF THE GASS. By Martha Wolfenstein. Cloth, 7% x 5 in., 295 pp. Jewish Publication Society of America

"HE novelist nowadays is often a contributor to the budding science of sociology. Besides the interest of his plot he has often information to give as to modes of life and thought of outof-the-way communities. These "Idyls of the Gass" (the "Gass" is the Judensgasse or Jews' street) subserve this purpose. Besides their

intrinsic interest, they give a very full and attractive account of the life of the German Jews before culture and education broke down much of the older tradition. The mainstay of the ldyls is the character of Margam, the grandmother of the Ghetto; and an attractive study she makes, with her shrewdness and charity, and her pride in and love for her grandson Shimmelé. In such a book as this it is the atmosphere that counts, and Miss Wolfenstein has succeeded in giving the atmosphere of the old lewish life with remarkable success. Her pictures, the primarily intended for Jews, deserve to attract the Gentile world who have so much curiosity to enter into the inner feelings of the Chosen People.

MARTHA WOLFERSTEIN.

#### WILD ANIMALS HE HAS KNOWN.

YOUNG BARBARIANS. By fan Maclaren. Cloth, 31/4 x 71/2 in., 318 pp. Price, \$1.35 net. Dodd, Mead & Co.

HIS breezy chronicle of boy Scots at Muirstown Seminary will beget a kindler glow of feeling for the Rev. John Watson in its readers, and make not a few of them smilingly wish they could hear that worthy divine preach a sermon! The note struck by

Thomas Hughes in "School Days at Rugby," where Tom Brown has his immortal fight with "Slugger" Williams, is the keynote of the book.

IAN MACLAREN.

The "Young Barbarians" whom Byron speaks of as playing about the rugged consort of the Dying Gladiator could not have had more genial boy " cussedness" in them than the brood of Muirstown Seminary. The author, as if constrained to mild defense of such straight-from-the-shoulder dealing with his beloved theme, remarks: "It may be disappointing, but it remains a fact, that the human history of the ages is repeated in the individual, and the natural boy is a savage, with the aboriginal love of sport, hardy indifference to circumstances, stoical concealment of feelings, irrepressible passion for fighting, unfeigned admiration for strength, and slavish respect for the

strong man. By and by he will be civilized and Christianized, and settle down, will become considerate, merciful, peaceable-will be concerned about his own boys having wet feet, and will preside at meetings for the prevention of cruelty to animals; but he has to go through his process of barbarism. During this Red Indian stage a philanthropist is not the ideal of the boy."

not the ideal of the boy."

Every boy in Murratown Seminary is of the Red Indian sort. They fight, play truant, cit up tricks in recitation hours, own Muistown, and are rigorously burched by a wonderful born schoolmaster, Duncan MacKinson, whom they only knew—and love—as "Bull Dog."

The character drawing is wonderfully fresh and true; the humor

abundant and racy; the sentiment almost Spartan in its eschewal of sentimentality. You learn about the community of the "Fair City" by sentimentality. You learn about the community of the "Fair City" or to form the property of the "Fair City" or to for sparrows, Issues, Dank Robertson, the admit Dowliggine—serected little marks:—Bull Dog, Money, Inaly-like Mr. Byles, Spenig's father, the horse-seller, the pempions little mark —Bull Dog, Money, Inaly-like Mr. Byles, Spenig's father, the horse-seller, the pempions little mark—rou know them all, and you feel young laured to his literary crown by this extremely modern, thorough sympathetic synthesis of the endeaning trasts of "Young Barbarians-spenishess of the endeaning trasts of "Young Barbarians-spenishess of the endeaning trasts of "Young Barbarians-spenishess".

# CURRENT POETRY.

# The War Spirit.

By ARTHUR STRINGER. He est behind his roses and did wake With careless hands those passions grim That naught but War and Blood and Tears can slake.

And naught but years can dim

So o'er their wine did Great Ones sit and nod, Ordaining War-as it befell: Men, drunk with drum and trumpet, talked of

And reeled down blood-washed roads to Heil. -In December Bookman.

# The Prison

BY ARTHUR SYMONS I an the prisoner of my love of you.

I pace my sonl, as prisoned culprits do, You stand like any jailer at the gate, And I am fevered, chill, and desolate, Weary with walking the damp dungeon-floor, Cursing your name, and loving you the morn Por crying curses. If I could but keep Your thought away but just enough to sleep One calm night through, I might enjoy the atars But now I see beyond my prison-bars, Night and day, nothing; only iron rust, And windows blackened over with wet dust

While I was simmbering, half awake, I heard A voice that spoke a little poisonous word, Subtly against my ear; it said that all These barred inventions are fantastical These four unfriendly walls I touch and see A wilful dream and no reality. And that I need but waken to be free. A conning but a foolish voice! I know Your walls are solid, stablished long ago, Not for one only : here's name after name, Carved on the stones: I'll add my name to them Ontside, I bear, sometimes, far off yet land, A sound as of the voices of a crowd, And hands that best against a gate; I hear Cries of revolt, and only these I fear.

RUSSELL & WINSLOW, Postal Telegraph Big . New York.

F you are not convinced from my previous advertising that my system of Physiological Exercise will do all that I claim for it, the fault is in the advertising and not in the system itself.

When I tell you that I teach a different kind of exercise, something new, more scientific, more rational, safer and immeasurably superior to anything ever before devised, I am but repeating what thousands of prominent men and women are saying for me who have profited by my instructions. What is so strong as the testimony of others?

Mr. I. Logan Jones, Vice-Pres, and Secy. of Jones "Moses and the Prophets."-Milton S. Terry. Dry Goods Co., of Kansas City, Mo., after years of gradual but certain decline physically and mentally, had a complete collapse. It was impossible for him to sleep without medicine and he went without natural sleep for the period of about ten months. He tried the best physicians to be had, traveled almost constantly, being unable to remain long in one place; took hunting trips in Colorado and a seacoast trip to Northern Maine, with no appreciable results. He had been constipated for sixteen or seventeen years and had to take physic constantly, never having a natural action. The following is an extract from a recent letter to me: " A little over ten months ago I took my first exercise from you, and under the circumstances consider the transformation a positive miracle. Will say that I am getting to be quite a giant. I weigh more than I have ever weighed in my life, and my muscular development is something wonderful. I sleep soundly, my digestion is good, constipation a matter of ancient history, and do more work than I ever did in my life and enjoy it all the time." What could be more convincing, and do you wonder that he is enthusiastic? I could name hundreds of others who have received similar results but it would not make the system any better. But if you will follow my instructions for a few weeks I promise you such a superb muscular development and such a degree of vigorous health as to forever convince you that intelligent direction of muscular effort is just as essential to success in life as intelligent mental effort. No pupil of mine will need to digest his food with pepsin nor assist nature with a dose of physic. I will give you an appetite and a strong stomach to take care of it: a digestive system that will fill your veins with rich blood; a strong heart that will regulate circulation and improve assimilation; a pair of lungs that will purify your blood; a liver that will work as nature designed it should; a set of nerves that will keep you up to the standard of physical and mental energy. I will increase your nervous force and capacity for mental labor making your daily work a pleasure. You will start the day as a mental worker must who would get the best of which his brain is capable. I can promise you all of this because it is common sense, rational and just as logical as that study improves

> the intellect. I have no book, no chart, no apparatus whatever. My system is for each individual; my instructions for you would be just as personal as if you were my only pupil. It is taught by mail only and with perfect success, requires but a few minutes' time in your own room just before retiring, and it is the only one which does not overtax the heart. I shall be pleased to send you

> free valuable information and detailed outline of my system, its principles and effects, together with testimonial letters from pupils.

tion elected much admiration. His career has been one of unusual interest, as he was born a slave on the plantation of Jefferson Davis in Mississippi. Noticing the boy's brightness the late President of the Confederacy made of him a sort of body servant, and he was taught to read and With this start he practically educated himself, and when the slaves on the Davis plantation were liberated. Montgomery started north to earn his living. He accumulated a few thousand dollars and returned to Musawainni concerned the idea of founding a town for the industrious menibers of his own race who could obtain work from the whites, and who were unsuccessful in working for themselves. He leased plots of ground which he had purchased at a low rental, with the result that negro families flocked to this portion of Mississippi from all portions of the field States. Today the town has a population of nearly a concontains several important industries, as well us chorches and schools, It is what might be calle a one-man town, for the mayor has planned and carried out about everything of importance in it. It is the market for a section of the country fifty to seventy-five miles around it, and one of the most important railway stations on the lilinois

Oungressman Littlefield's Love of Borses. When Charles E. Littlefield was a young lawyer, his first extravagence was the purchase of two borses which he drove in a span. He declares that if he ever fails he will fall like ancient Troy, rained by a borse. Says The Saturdey Evening Paid (Philiadelphia):

"The spectacle of a young lawyer roding in a nearrow-seath bugy drawn by two robust bersee impressed them in the same way as would the sight of an old lawyer smoking two cugars at one time. The Congressman still dashes over Konc Country behind his two horses. When 1g on cut to ride, 'says be, 'I don't want to fool with bills. I want to keep going all the time.' This same trait applies to other activities of the blaine Congressman, as his Washington associates can be a superior of the congressman, as his Washington associates can be a superior of the congressman as his Washington associates can be a superior of the congressman as his Washington associates can be a superior of the congressman as his Washington associates can be a superior of the congressman as his Washington associates can be a superior of the congressman as his Washington associates can be a superior of the congressman as his Washington associates can be a superior of the congressman as his Washington associates can be a superior of the congressman as his washington associates can be a superior of the congressman as his washington associates can be a superior of the congressman as his washington associates can be a superior of the congressman as his washington associates can be a superior of the congressman as the washington associates can be a superior of the congressman as the washington associates can be a superior of the congressman as the washington associates can be a superior of the congressman as the washington associates can be a superior of the congressman as the washington as the washington as the washington as the washington as the wa

naw testify. "Not long ago a local verse writer penned a poem in which the stalwart Congressman from the second Maine dustrict was compared with a trotting-horse. He was held forth as 'going without billnders, nut fariad of the cars' and the poeten thusiastically declared that he didn't need a cheek-rein or bior curb, and that where you life him there would you find him, far he would stand without hitching.

"This is said to be Congressman Littlefield's favorite bit of verse."

Calife's Chaicea.—When Madame Cale was a child she wandered through the rugged country of Averron, in Southern France, and selected the châiceau that she dreamed might one day be here. In the fulless of time her dream was realized, and to-day she is the possessor of the historic Châicean of Cabrières. Willing of this beautiful country home in The Stranday Enesing Plut (Philadelphia), Mr. William Armatrong says:

"The château has been restored as she pictured it in her girlhood, and the, perhaps, it is not furnished with the gilded splendor that early young generally selects for its palaces, it is at any rate more appropriate.

"The place has an air of rostance abust it, in keeping with its medieval architecture, which recalls the dave when troubadours sang their way through the country about Acyron. It is perched like an eagle's nest, overlooking the beautiful gorge of Tarles. The architecture is Roman and the massive stone walls, that have outlived generations, are pleturesquely battlements.

"Madame Calvé is a very hospitable hostess.

There are always guests in holiday time at the

The lamp with | Dearly half a century of triumphs and the fact of his having defeated Kolisch in their match of 1860-61 by the score of 9 to 8. Nevertheless, Kolisch was not in the senith of his strength until six years later, when he won the Emperor's prize in Paris, et which time the depth and brilliancy of his play seemed to indicate that he was the greatest master of that period. As a specimen of the skill of these rival gients we select the following fice game from the match referred to, as possessing features charecteristic of their different styles of play:

## The New Discovery for Catarrh Seems to Possess Remarkable Merit.

A new catarrh cure has recently appeared which so far as tested has been remarkably successful in curing all forms of catarri, whether in the head, throat, bronchial tubes, or in etomach and liver.

edy is in tablet form, pleasant and con venient to take and no special secrecy le maintai as to what it contains, the tablet being a scientific combination of Blood root, Red gum and similar

valuable and harmless antisoptics. The safe and effective catarrh cure may be found at any drug store under the name of Stuart's Catarrh Tableta

Whether the catarrh is located in the nose, throat, pronchial tubes, or stomach, the tablets seem to act with equal success, removing the stuffy feeling in head and nose, clearing the mucous membrane of throat and traches from catarrhal secretions which cause the tickling, coughing, hawking and

gagging so annoying to every catarrh sufferer. Nasal catarrh generally leads to ulceration, in some cases to such an extent as to destroy the nose on tirely and in many old cases of catarrb the bones of the head become diseased. Nasal catarrb gradually extends to the throat and bronchial tubes and very often to the stomach, causing that very obstinate

trouble, catarrh of the stomach. Catarrh is a systemic poison, inherent in the bloc and local washes, douches, salves, lohalers and sprays can have no effect on the real cause of the disc An internal remedy which acts upon the blood is the only rational treatment and Stuart's Catarrh Tabletain the safest of all internal remedies, as well as the most convenient and satisfactory from a medical standpoint.

Dr. Eaton recently stated that he had successfully used Stuart's Catarrh Tablets in old chronic cases, even where ulceration had extended so far as to de stroy the septum of the nose. He says, "I am santly surprised almost every day by the excelient results from Stuart's Catarrh Tablets. It is remarkable how effectually they remove the excessive secretion and bring about a healthy condition of the us membranes of the nose, throat and stom

# HILL BROOK FARM

The Owner Comments on Grape-Nuts

A farmer with his out of door work might have reason to expect more than the average of good health if he would use proper food and have it well cooked. but many of them, in middle age, suffer tormenta from dyspepsia, and following that a weakened nervous system.

To show the value of a change in food we quote from a letter written by L. Flagler, owner of Hill Brook Farm, Charlottesville, Va.

"I have spent a very considerable amount of money in trying to cure my stomach trouble with medicines. and have changed climate several times. About two years ago I was taken worse. My heart and kidneys gave me much trouble. I could not sleep nights. Was very peryous, thin and discouraged. Finally I changed my food and began taking Grape-Nuts Breakfast Food. This agreed with me and I thought I could see my way out, so I have stack to Grape-Nuts for a year and

a half and gradually the old troubles have disappeared. I have made splendid progress in health and strength, sleep well and can now do a good day's work for a

man of fifty years,

I know that Grape-Nuis caused the change, and although I am now able to use other food as I like still I stick to Grane-Nuts because I know how it nourished me, and besides, wife and I both like the food,

me, and besides, wic and I both like the food.

She says nothing has helped her nervous system like
Grape-Nuts. We buy the food by the case and are
very enthulsated in regard to it."

It is plain that nervous, worn out people can be
brought back the leafth by using Grape-Nuts.

# BRIGHT'S DISEASE AND DIABETES IN LIFE INSURANCE

Thousands of men are now in danger from Thousands of men are now in danger from these diseases without knowing it. This is not an alarmist claim, but a serious and provable fact. Year after year the number of men who are terrified by jearning, on apof men who are terrined by learning, on ap-plying for life insurance, that they are vic-tims, is enormous. They had no huit of their condition, until the rigid examination revealed it.

This stealthiness is the terrible feature of these diseases. To most men the annunce-ment of their condition comes as a death warrant

Yet these diseases are curable. Our treat-Yet these diseases are curable. Our treatment has brought radical and permanent cure to a host of cases for whom the best physicians could do nothing. The patients have been mainly persons of culture and education. Their testimony makes doubt education.

Our single aim is that persons afflicted or threatened with these diseases will investi-gate our claims. We have seen and we know that our treatment offers the sufferer a hope that can be found nowhere else in the world.

# TOPICS OF THE DAY."

# WHO IS TO BLAME FOR THE NEW YORK TUNNEL DISASTER?

A S all the people of New Eagland who come to New York City by rail, and a large fraction of those who come here from other parts of the country and from Canada, enter through the Park Avenue tunnel, the wreck last week by which seveateea persons lost their lives and two score were injured is a matter of widespread interest. The New York newspapers are especially concerned over the accident, and they do not hesitate to locate the blame for it. The engineer who ran his locomotive into the ill-fated train pleads that he did not see the signal lights on account of the thick smoke. The newspapers accept this plea, and remind the New York Central directors that their attention has beca called to the smoke auisance, and the adoption of electric traction in the tunnel has been urged for years, and they hold the officers and directors of the road responsible for the result of their failure to act. One of the most outspoken papers in New York is The Journal; one of the most conservative is The Evening Post. The Journal says:

"The owners of the New York Central Railroad are respoasible for the deaths which occurred in the tunnel yesterday,

"Those deaths, or rather those murders, occurred because the owners of the New York Central would not spend the money necessary to make their road safe.

"They preferred present profits to the safety of the public, and they therefore took a cash coasideration for the lives sacrificed in a needless disaster."

Says The Evening Post:

"Wherever the technical responsibility for yesterday's catastrophe in the tunnel maintained and operated by the New York Central may rest, there can be no doubt that the moral responsibility is borne wholly by the officials of the railroad to whom the continuance of this public nuisaace is due."

About all the other papers in the city agree that if the road had been using electric traction in the tunnel the wreck victims would probably be alive to-day. Some of the papers that express this opinion are The Tribune, The World, The Mail and Express, The Herald, and The Press, The Times, a very conservative paper, says:

"The directors of the New York Central and Hudson River

Railroad . . . have done the best they could, and they have sedulously refrained from saying or doing anything which would lead the public to beheve that they were honestly trying to do the best that could be done. The conditions existing in the tunnel have long and justly been the cause of public complaint, and a recent grand jury made them the subject of presentation. What have these gentlemen done or authorized others to do to warrant the belief that they cared what the public thought or the grand jury said?

"An accident similar to that of Wednesday last occurred in the tunnel between Eighty-fourth and Eighty-fifth streets on the 20th of February, 1891. A 'wild-cat' shop-train, going from Forty-second Street to the Mott Haven yards, was stopped for some reason in the tunuel, and while thus stalled was run into and telescoped by the New Haven local train which followed it, Seven persons were killed and many injured. The inquest which followed was the most thorough technical inquiry of which there is record. It was a painstaking and extremely intelligeat investigation, lasting many days, and resulted in a verdict that the engineer of the New Haven train failed to see the danger signals which should have caused him to stop his train because of the smoke and steam which filled the tunnel. 'The jury called for better ventilation of the tunnel, but no attempt at better ventilation has been made.

"The same thing has happened again from precisely the same cause. Should the jury in this instance make a similar recommendation as to tunnel ventilation, the disposition of the maaagement would probably be to receive it in silence and ignore it as impracticable. This is not likely to be permitted. The directors of the road maintaining the tunnel nuisance have shown that they can not be trusted to do what jatelligent self-interest should have prompted them to do long ago. Any further toleration of their indifference to the public comfort and the public safety will be readered impossible by the fact that every officer of the new administration having jurisdiction in the matter will exhaust his powers to compel the immediato reform of the tunnel conditions. If they fail, the legislature will find itself under the necessity of effective action. The corporation is very powerful, but scarcely powerful enough to compel the people of New York to tolerate the continuance of the present tunnel coadi-

Radical Press on Anti-Anarchist Laws. - The radical papers deprecate strongly any legislation almed at the Anarchists. Free Society, an Anarchist paper published in Chicago, declares that President Roosevelt's words on Anarchism in his message are "a pitiable exhibition of stupidity and ignorance," and the editor, who writes in a personal veia, goes on to say: "Instead of showing the least knowledge or discernment, it is simply a reliash of recent newspaper ravings during a time of paaic. I had credited Roosevelt with some indepeudeace and intelligence; but I must admit that I was a victim of 'dope,' and committed the folly of giving credence to some current reports." The Missouri Socialist (St. Louis) thinks that any law against Anarchy may easily become a "most elaborate secret political spy system, which would be used against any political agitators who oppose the Administration"; and the Chicago Public (single-tax) says similarly:

"Coafiding creatures alone imagine that federal laws against 'Anarchy' would be enforced only against men with knives, torches, pistols, and bombs. It is impossible to draft a law such as President Roosevelt proposes which could not be enforced against labor-union speakers and papers by a federal administration in sympathy with employers; against Democratic speakershand papers by a Republican Administration; or against Republican apeakers and papers by a Democratic Administration. The dangers of centralization from Mr. Rowsevelt's recommendations for the punishment of "Anarchists," a recommendations for the punishment of "Anarchists," a recommendation as vague as it it were for the analysis of "bad men," as a vague as it it were for the administration of "bad men," as a vague as it it were for the administration of the punishment of bad men, as a vague as it it were for the administration of the punishment of the punis

# THE PRESIDENT TO REVIEW THE SCHLEY

THE newspaper interest in the latest phase of the Schley controversy is noticeably languid. The report that the President will permit Rear-Admiral Schley to appeal to him from the decision of the court of inquiry is treated at some length in the news columns, but editorial comment on it is in many cases perfunctory, or lacking entirely. "It is difficult to understand," says the Boston Herald, "why the President should volunted should.

DANGEROUS NAVIGATION.

Ite must pass between Scylla and Charybdis.

The Brooklyn Facile.

reopen the case, or what Admiral Schley should expect to gain by his so doing, unless the further agitation of the subject shall be regarded as a gain by him." Some of the Schley papers, however, are glad that the matter is to be taken up again, and are advising the President as to what his verdict should be. The Jacksonville Times-Union says: "If the President should decide in favor of Admiral Schley, the Sampson-Schley controversy would be ended. Public sentiment is almost unanimous in the belief that persistent and gross injustice has been done. The controversy will never be ended by a decision that outrages the almost unanimous verdict of public opinion." The Baltimore Sum observes similarly:

"If Mr. Roosevelt really desires to 'end the Schley controvery'—and to end it in a way which will satisfy the wast majority of the American people—he has only to disapprove the verdict which most of his fellow citzens have condemned. Justice for Admiral Schley is the demand of the people of all parties and of all sections. The President has a great opportunity to promote the interests of the navy, to serve the cause of justice, and to respect the wishes of the people. It is an opportunity which he should welcome."

On the other side the New York Sun says:

"When the appeal is made to the President in behalf of Rear-Admiral Schley to reopen and rehear and, of course, reverse the findings of the court of inquiry, two gentlemen must in justice be considered, namely, Rear-Admiral Ramsay and Rear-Admiral Beuham. Admiral Dewey we may leave out of the case.

"Ramsay and Benham have been assailed for their conclusions by the Schley partizans as tho they had been guilty of corruption. The accusation against the Navy Department of 'trumping up' evidence against Schley having been blown into air by the investigation, Schleyism turns for another target of abuse to the officer whose duty it has been under their oath and understandling of the testimony offered to make it known that all criticisms of Schley made by the Navy Department, and more, were true. There is no man, no reputation, no principle of hone that Schleyism would not destroy to satisfy its prejudices. It now demands for its victum Ramasy and Beaham, who, for the diguity of the navy, if for nothing else, are not to be surreadered except upon the most convincing proof of the justice of the demand. Of such proof the objections to the fluidings of the court already field by Schley's counted to not afford a trace."

# EARNINGS OF \$85,000,000 IN NINE MONTHS FOR THE STEEL TRUST.

THE announcement at the quarterly meeting of the board of directors of the United States Steel Corporation last week that the earnings for the first nine months of its existence amount to \$81,779,299 arouses considerable remark. The New York World, for instance, wonders if these "piethoric profess might not move the steel combine" to be as generous to American as to British buyers of its products." It says:

"It is now selling steel rails, for example, in England at \$22.50 per ton, after paying the railroad and ocean freights. The ocean freight alone is \$5.11 per ton. So that American steel rails are really being sold in England at \$1.7 per ton net,

"The American price is \$88 per ton—\$1 thigher than the English price. As 200,000 tons of steel rails are consumed in this country every year, the steel trust is collecting at least \$22,000 as year from its American customers in excess of what it would eagerly accept from its foreign customers for the same quantity of rails.

"In view of those \$55,000,000 net earnings in nine months would it not be reasonable to take off the Dingley duty of \$7.84 per ton on steel rails? That would bring the American price down to \$20 per ton, which would still be \$3 a ton more than the trust is selling them for in England."

The New York Tribune thinks these profits are "not phenomenal." It observes:

"The report of the United States Steel Company showing the carnings for the first nine months of that itianic copporation's existence makes the head reel with the size of the figures. That is a total of use tearnings of nearly \$\$8,000,000 should be piled upon the months by any company, no matter what its size, would have seemed to our forebears like the widest dreams of an Arabian romancer. This gigantic industrial consolidation, with a capital that approximates our national debt and an income greater than that enjoyed by any civilized nation in the eight eventh century, may well give pause for consolidation, they wast and complex a piece of industrial and financial machinery that the mind can not grasp; it em masse, and must therefore content itself with an examination in detail. But are the company's earnings as stupendous as they seem to be?

"The capital of the company in bonds and preferred and common stock is well over \$1,300,000,000, and on this capital the yearly earnings bid fair to reach a total of \$110,000,000. Large as this sum is, it amounts to less than 81/2 per cent, on the entire capitalization; and this, for au industrial company, is not supendous. In this department of business greater returns are looked for than in others. The general rule is that a feast or a famine always prevails, and that the good years must care for the bad. This is peculiarly so in steel. Mr. Carnegie was once quoted as saying that a steel manufacturer was either a prince or a papper, due, of course, to the alternation of good and bad years in the trade. Were the proportion of earnings to eapital the same in a million-dollar corporation that they are in the United States Steel Company, they would come to some \$85,000 annually. After deducting interest on the bonds and setting aside proportionate amounts for sinking funds, depreciation, reserve, etc., the surplus for the year carried over would approximate something like \$18,000, which, while it would encourage, would not wildly exhilarate the owners of the million-dollar corporation.

"The report of the great steel corporation affords pleasant

reading for the shareholders, and reflects great credit on the management of the company. At the same time it is not so phenom had as to create wild enthusiasm or to cause the values of steel securities to advance to unduly high figures."

## A POSTAL OFFICIAL UNDER FIRE.

DWIN C. MADDEN, third assistant postmaster general. has brought down a good deal of criticism upon himself from the smaller papers, especially the radical ones, for some of his recent rulings in regard to the admission of newspapers to the second-class rates. One radical paper, The Challenge, was excluded from the second-class list on the ground that it was devoted urincipally to advertising the editor and his ideas, and so came under the head of "publications designed primarily for advertising purposes." The editor hit upon the idea of transferring his magazine to Toronto, where it was immediately admitted to the Canadian newspaper postal rates (one-half lower than the rate in this country), and he is now publishing it there under the name of Wilshire's Magazine, and under the postal treaty between Canada and the United States our post-office department has to receive and circulate it. Mr. Wilshire finds that he is saving money by this arrangement, and says it is difficult for him to pose as a martyr, but he will do his best. Another radical paper. The Appeal to Reason, was threatened with exclusion because one-third of its mailing list was made up of names of people whose subscriptions had been paid by others, who took this way of spreading radical doctrines. Mr. Madden said, in a letter to the editor of The Appeal:

"There is no objection to a reasonable number of subscriptions by one person for another, when not for an ulterior purpose. But when such subscriptions amount to a considerable part of the claimed list of subscribers, and they are paid for by persons manifestly interested in the circulation of the publication because of the doctrines it advocates, or because of the goods with the claimed list advertises, they have uniformly been held to be not 'legitimate' a reasonable number paid for by others, not because of the doctrines at doctage and the subscribers required or the good advertised, the legitimate list of subscribers required by law must be made up of persons who pay for the publication with their own money.

This has raised a great outcry among the radical papers, who think that they see behind these rulings a desire to persecute

UP WE ARE OBLIGED TO USE STRAPS, WHY NOT ADOPT A BENEFICIAL AND AMUSING DEVICE LIKE THIS!

The Chicago Record-Herald.

and suppress the radical papers "because of the doctrines they advocate." Mr. Madden, in reply, points out that he recently admitted to the list Free Swiefy, the Chicago Amershist paper, and says that "if the department designed to discriminate against any class of publications, it surely would have thrown out an Amarchist sheet." The radical papers think Mr. Madden should resign, an opinion that he does not seem to share.

A more general criticism is made by the Chicago Public, a single-tax weekly, which thinks that the second-class privilege for newspapers, and the privilege of receiving mails, sometimes denied the persons guilty of fraud, are matters of commercial value and of personal right, and should be passed upon by the courts, not decided in an arbitrary way by a government official. It cites several other cuses similar to the ones described above, and says:

"It is this irresponsiblity of the postmaster-general over second-class matter that constitutes the real objection to that department of the postal service as now administered. He is given judicial power; he uses the power unjudicially. It is left to him to decide, for instance, what constitutes a legitimate list of subscribers. He does decide, but arbitrarily in each 'individual case.' And in virtue of his decision, without the aid of a jury, without public examination of witnesses, without any inquiry that can truly be called a hearing, but simply through ex parte investigations by bureau subordinates, valuable property rights are ruthlessly destroyed. For the good-will of a periodical is a property right; and it depends upon second-class mail privileges for existence. Yet the postmaster-general cuts it off from these privileges by his mere dictum. He even cuts it off, when he sees fit so to do, in advance of his decision and while he makes his investigation. .

"Nothing could be more prejudicial than conduct such as we have here traced to the second-class bureau of the postal department. The value of periodicals is as brittle as glass. It depends so much upon their regular delivery to subscribers that a voluntary suspension means abandonment. Enforced suspension therefore means suppression; and denial of mailing rights, tho only temporary, is equivalent to enforced suspension. No bureau of the Government should have that power. No bureau of the Government should have that power. No bureau of the Government should have that power. No bureau cret virieties of even the humblest publisher.

"And only a week or so ago the news despatches told of orders issued by the post-office authorities at Washington to stop the mail of thirteen investment companies doing business at Louisville, Ky., upon charges of carrying on business under false presents. Now it may be that all these people are swindlers and

UNCLE SAM: "Cuba is all right now? With the American game and American politics there's no need of any more insurrection for excitent."

—The Minneapolis pursul.

[January 18, 1902

ought to be denied the use of the mails. But that is not the question. The question is whether the prerogative of deciding that they are swindlers, and of denying them the use of a public service which has come to be a necessity of social and industrial life, shall be summarily and irresponsibly exercised by an administrative officer at Washington. Is 'due process of law' obsolete?"

## INCREASED COST OF LIVING.

THE advance of the cost of living in the United States has of late attracted much attention in many of the financial journals. Dun's Review, one of these journals, recently published a statement giving the prices of the different commodities on January 1. Compared with July 1, 1897, these prices show an advance of 40 per cent., while there is a decrease of 16 per cent. compared with the cost in 1860. The most notable advance has been in breadstuffs. The Review continues.

"Examination of the index number table shows that the farming population receives the greatest share of enhanced prices, the rise in breadstuffs falling little short of 90 per cent, while meats rose nearly 30 per cent, and dairy and garlen products 25 per cent. Much of the latter gain is due to the change in season, as eggs, milk, etc., are all more expensive in winter than in mid-summer, but this factor enters into the record and can not be ignored."

The New York Financier, in solving the cause of prevailing high prices, tell us that during this period of advanced prices

- The Cleveland Plain Dealer.

there has been a marked degree of prosperity. In this prosperity the amount of visible money in circulation and the per capita circulation count for little. "Part of the latter is permanently in banks, and the larger percentage is passing through these institutions from day to day." It continues:

"There has been a gradual rise in per capita circulation in the United States, it is true, over a series of four or five years, but the rise in values, it should be understood, has been general the world over—at least until very recently—and has taken place regardless of per capita circulation. Coincidently, wages have increased. Per capita circulation has nothing to do, as will no doubt be conceded even by most rabid advocates of the quantita-

tive theory, with shortages in crops, or other accidents of nature that establish the quantity of food or other necessities. If we have a shortage in one commodity it is only logical that prices should rise. On the other hand, the cycles of prosperity, which seem as recurrent as the tides, bring about a demand that for the time being absorbs more than the average volume of supply, and we have the spectacle of rising prices. But coincident with this advance there is usually a similar impetus in the distribution of profits to the wage-earner, and with it also a condition of wider buying power which aids in sustaining a higher level. These are the familiar phenomena of prosperity. The whole structure rests on confidence and credit, and theoretically, having established this basis, there should be an indefinite continuance. It need not be repeated, however, that such a condition is impossible. Some one makes a mistake, a local failure is magnified, and men become at once fearful of the future. The process of retrenchment disturbs the whole fabric of society, and prices begin to fall. Then the cost of living, measured in index figures, is lowered, but as a matter of fact the comfort of living is probably lowered in a similar degree to the majority, since their opportunity for work is curtailed. The whole question revolves around the principle of credit, and its corollary confidence. Visible money is only an unimportant factor. In support of this theory we have only to refer to the disaster attending the forced issue of silver dollars in this country from 1878 to 1893, to the panic of 1857, following a rise of \$483,000,000 in gold and paper money, and to other incidents of like nature which might be mentioned. Finally it may be stated that the bank circulation in England has been falling for fifty years, and in the face of this fact the standard of living has been steadily rising."

# LABOR PRESS ON THE ARBITRATION COMMISSION.

THE trade-union papers take a very different view of the new capital-labor arbitration commission from that expressed by the Socialist journals quoted in these columns two weeks ago. The labor papers think that the new commission (which was discussed fully in our issue for December 38) is of serious and promising importance. The National Labor Train on the property of the property of the property of the property must good, "and it believes that "it will usher in a better era for American labor." The same paper continues a

"It is certain that there will be no industrial disputes of any consequence in the country in which one or the other side will not appeal to the tribunal, and there is not a great corporation in America, any more than a labor-union, which could afford to ignore the challenge.

"If such a tribunal as this had existed a few months ago we do not believe the sted strike would ever have happened, and here is the annual convention of the miners of America approaching, with the inveitable wage question lowering along the horizon. It is reassuring to think that, if that convention should ratise any issue that the coal-operators should propose, the arbitration tribunal, composed of men of the highest character and intelligence representing conspicuously and authoritatively all interests and all classes, stands by ready to interpose its peaceful offices and decide all questions of controversy in a manner which will be equitable and will, without doubt, earry public opinion both capital and labor and a bleesing to the entire nation. In view of the coatliness of strikes, it is a wonder that we did not have something his tel bong ago.

The United Mine-Workers' Journal (Indianapolis) calls the conference and the resulting commission "the grandest achievement of organized labor during the past year," and says:

"It is not expected that it will banish all industrial strife; there are and will be selfish employers and stubborn employees. Between these there will be war. But for those imbred with a spirit of fairness and justice there will be misunderstandings, which arbitration will clear np. Organized labor alone, we think, will profit by the work. Individual grievances presented by individuals will not receive attention. With this, then, as

an object organized labor can face the future twelve months with the calmness born of coundence that its rewards for it will be manifold......

"It may seem optimistic, but it looks as if the shadow of the approaching millennium was projected upon the screen of industrial affairs when John Mitchell, Charles Schwab, Mark Hanna, Samuel Gompers, Bishop Potter, and Archibishop Ireland met, put their feet under the table, and discussed ways and means to prevent industrial wars. The man who would have predicted

this ten years ago would have been laughed to scorn and would have been deemed a visionary."

# The Labor World (Duluth)

"The days of big strikes will soon be numbered with the past, if the efforts being made by the industrial department of the National Civic Federation prove successful. While the sentiment in America is opposed to compulsory arbitration, yet no one stands opposed to arbitration entered into voluntarily by those concerned. Labor should never oppose arbitration when it has the right to choose one of the arbiters. Most men are usually just-and none but such men should be chosen on a board of arbitration-and when a case is presented to them, all can rest assured that a fair deeision will be handed down. The success of the present undertaking by the National Civic Federation will depend entirely

upon the sincerity of those interested. The most prominent employers in America, the leading labor advocates, and some of the most noted citizens of the country have given the project their hearty commendation.

"It is gratifying to know that all sides are endeavoring to bring about industrial peace. When it is understood that controversies between capital and labor are to be voluntarily submitted to arbitration, both sides will endeavor to have the case as near right as possible, to the end that it may be adjudicated upon its merits."

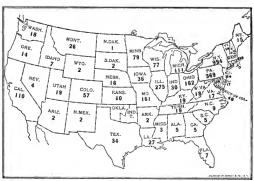

## Savs The Coast Seamen's Journal (San Francisco) :

"It is still too early to pass any opinion as to the practical results that may be looked for in this matter. Everything will depend upon the spirit that really animates the representatives of the different interests on the committee. Granting a mutual spirit of consideration for the interests of all concerned, a better uuderstanding of and more cordial relations between these interests is bound to ensue. Contrary to the ipse dixit of many persons, the whole modern tendeucy of the industrial world is toward the prevention of settlement of disputes by conference, conciliation, and concession. This condition, as it happens, is most marked in the conduct of the organized workers. So far, however, this tendency has found expression only in cases of individual organizations, or at most of individual industries. The broadening, if only in a tentative way, of this tendency, so as to embrace the workers and the industries of the country at large, is a great moral victory for the position of organized labor that may well justify even the most sanguine hopes for the outcome.

"One thing is certain. The reputation of the men comprising the committee of thirty-six is a fairly good assurance that they will not go to their task hampered by any illusions, either as to their own or each other's position and powers. So far as the committee has gone it gives promise of being a practical body. This of itself augurs well for substantial results from its future deliberations."

# MILLIONAIRES GEOGRAPHICALLY CONSIDERED.

THE names of 3,546 men and women are published in the new issue of The World Almanac, classified by the States and cities they live in, under the eaption, "American Millionaires." The editor explains, in a prefatory paragraph, that "it is not assumed that the lists of these persons on this and the following pages are complete or in every instance accurate";

DISTRIBUTION OF AMERICAN MILLIONAIRES.

but, he says, "a very careful, systematic effort has been made to secure both completeness and accuracy." All the lists have been submitted to expert opinion in the localities where the reported millionaires live or do business, but the editor "is aware that there must be errors both of omission and commission." We give herewith an outline map of the country, based on these lists, showing the relative density of millionaire population in the various States. North Dakota, for example, has one of them; New York, at the time of going to press, lacked six of having a thousand. The climatic or commercial conditions of the northeastern part of the country seem from the map to be most favorable to the growth of millionaires; the section bounded on the west and south by Minnesota, Iowa, Missouri, Kentucky, and Virginia, and including those States, contains all but 406 of these interesting people. More than half of them inhabit the States touching the great lakes. Colorado and California, the gold States of the West, are the millionaire storm-centers of that part of the country, while Montana, with its cattle and copper, and Texas, with its many kinds of prosperity, are each comfortably supplied. Mississippi has but three, and Arizona, Arkansas, New Mexico, South Dakota, and Wyoming have only a pair of millionaires apiece.

# OBJECTIONS TO SENDING A REPRESENTA-TIVE TO THE CORONATION.

WHILE a considerable number of newspapers are taking up and approving the suggestion of the New York Press that ex-President Cleveland be sent to King Edward's comenation as the special representative of the United States, the New York Journal's loudly objecting to the sending of any special representative. "Examination of the records at Washington," it says, whose shat this country has never before deemed it fitting.

be represented by a special envoy at a coronation," and it asks: "Why, then, begin now?" The monarchical government of Europe, it recalls, "Great Britain among them, refused to recognize the Paris Exposition of 1850, because it was intended to commemorate the beginnings of the ever-glorious French Revolution, which with all its blunders and crimes was the grandest, the most beneficent event in lumnativ's political history. ... should the American republic feel more kindly toward monarchy than monarchy does toward republicanism?" It goes on to say:

"Why should this republic concern Itself about the coronation of any king? Are European monarchs given to despatching fleets and special envoys to our capital when we inaugurate our President?.

"Surely not. And they are quite right, too. Crowned heads have no reason to wish this republic well, for it needs only the spread of the American idea to make an end of crowned heads.

"The argument in support of our official participation in the coronation ceremonies is that the act will be a graceful manifestation of friendship for the English people.

"In reality, whatever the Intent, the United States will do the English people no service by assisting in giving seriousness to a ceremony of which a modern nation should be ashamed. The whole thing is absurd and anachronistic. It will illustrate the survival of conception with which the democratic spirit of this age is necessarily at war. And it will tend to strengthen political and social institutions which linder the progress of the English people. Caste is the child of monatchy, and caste is the curse of Great Britain. It accounts for her army in South Africa, officered by 'flameled tools at the wicket,' and 'muddled oafs at the goals'—a deerption of England's young hereditary arisconstructions of the control of the control of the control of the control beautiff.

"Were the British republic about to instal its first president it would be fitting for the United States to send a feet of honor, an envoy extraordinary, and otherwise to do all in its republican power to eclebrate the advance of elemorary. But it is not fitting that the Great American republic should say to the English masses that it takes seriously and approves and officially sympathizes with the medieval circus of which London is solemnly preparing to be the ring.

"It is proper that at all suitable times and in every suitable way the United States should express amishle sentiments toward friendly peoples, but it is not right that our republican government should take a hand in the pompous flummerry with which Edward of England proposes to signalize his accession to a throne. It will be a glorification of the hereditary principle in government, an assertion of the divine right of kings against

which the birth of our republic was a protest, and against which our republic will continue to be a protest so long as the American people govern themselves.

"Moreover, there is a consideration, subsidlary but not nnimportant, that must not be overlooked.

"Who is to pay the hundreds of thousands of dollars which it will cost to send Mr. Cleveland and affect to England? The American people, of course. The Government can not get a dollar except by taking it from the pocket of the citizen by taxation. Every citizen, the very porcess, will have to contribute to the fund which it is into the compander in taking part in the third which it is into the compander in taking part in the to himself for having done the British people the deathless service of being the son of his mother.

"The fournal hopes that Congress will have something to say on the subject—that Americans will rise in both House and Senate to protest against the Administration's contemplated waste of public money for a purpose so foolish, undemocratic, and pernicious."

The Baltimore News indorses the objection made by The Journal, and says it "is thoroughly well taken." The Philadelphia Ledger, however, says that such talk is "mere demagogy."

# PHENOMENAL FIGURES OF AMERICAN RAILROADS.

R EPORTS recently issued by the Treasury Bareau of Statistics and the Interstate Commerce Commission show that two-fiths of the railtoad mileage of the world is in the United States, and that there are employed in the railtoad service more than a million men, a number larger than that of any standing army on the globe. Out of the 48a, 38a miles of railroad on the earth's surface, 109,378 miles are in our own country, enough to build 31 domble-track roads between New York and San Francisco, or enough to go around the world eight times, or roado many other improbable and useless things that seem to delight the minds of some statisticians. No other nation begins of paperach this country in the matter of railroad mileage, as may be seen from the following table:

The growth of our railroad traffic in the last few years is no less remarkable. The lncrease in mileage and in passenger and freight traffic, and the decrease in freight charges are related in the following paragraph from the report of the Treasury Bureau of Statistics.

"The railway mileage of the United States was, in 1830, 23 miles; in 1840, 2.818; in 1850, 9,021; in 1860, 30,626; in 1870, 52,-922; in 1880, 93,262; in 1890, 166,654, and in 1900, 194,321; and the addition of the mileage construction for this year, estimated by The Railway Age at 5,057 miles, brings the grand total for 1901 to 199,378 miles. It is only in more recent years that statistics of operation are available. According to the Bureau of Statistics figures, the number of passengers carried was, in 1887, 423 millions; in 1890, 520 millions; in 1895, 529 millions; and in 1900, 584 millions. The growth in the freight business is shown by the figures which state the number of tons of freight carried one mile. These figures are: For 1883, 39 billions; for 1887, 61 billions; for 1890, 79 billions; for 1895, 88 billions; and for 1900, 141 hillion tons. . While the length of railways and amount of treight tonnage have been increasing, the cost of transportation has greatly decreased. The average cost of freight transportation as given by the Bureau of Statistics figures at 1.24 ceuts per ton per mile in 1882; 1.03 cents in 1887; 0.93 cent in 1890; 0.84 cent in 1895; o.8o cent in 1897, and .75 cent in 19."

The same report gives some interesting facts about government ownership, as follows:

"Of these half a million miles of railway in the world, it is

estimated that about one-third are owned by the governments of the countries in which they are located. About nine-tenths of the railways of Germany are owned by the national or state governments; about two-thirds of those of Rossia are owned by the Government, and nearly one-half of those of Austria-Hungary are also owned by the Government. A large proportion of the railways of France will become the property of the Government about the middle of the present century. In Italy nearly perivate companies which least the lines from the Government In Australasia nearly all of the railways are owned by the government. In Australasia nearly all of the railways are owned by the government of the various colonies, and in India a large proportion of the 35.015 miles in operation is owned or guaranteed by the Indian Government."

# GERMAN-AMERICAN PAPERS ON THE VENEZUELAN-GERMAN TIFF.

A GOOD deal of interest is added to the discussion of our feeling toward Germany, in the present-Venezuelan imbroglio, by the fact that Germany has a larger representation among our foreign-born population than that of any other country. It is reckoned that about 4,000,000 of our people are of German birth or parentage, not counting those of the second and third generations. In view of this, it is of interest and importance to know how the German-American newspapers feel about Germany, Venezuela, the United States, and the Monroe Doctrine.

"Germany's conduct toward Venezuela is perfectly justified."
With these words the Staats-Leitung (New York) begins an
elaborate editorial on the present Venezuelan situation, in the
course of which it says:

"There are intimations-nothing official on the subject is forthcoming-that the German and United States governments have arrived at an understanding as to the steps to be taken. But all danger is not thereby obviated. Germany may find that the steps which she contemplates, and which our Government has sanctioned, may not answer her purpose. The question will then arise whether any subsequent action can with equal facility be made the subject of agreement. We must not forget that the American people are easily excited, and that at their head is not a man who lets himself be led by calm consideration and who is cool-headed enough to stem public opinion in a period of extreme agitation, as Lincoln once did in the Trent affair. Congress is in session and contains Hotspurs enough to make the danger greater. Hence arises the possibility that, with American and German war-ships present in Venezuelan waters, too great precipitaucy on one side or the other may lead to unpleasantnesses,

The Monroe Doctrine has nothing to do with the case, proceeds this authority, because it relates only to territorial acquisitions on the American continent by a European Power. The paper concludes by arging coolness and self-control until Germany goes too far, when it will be time to warn her. Far lighter is the tone of the Morgean Journal (New York), which thinks it the tone of the United States to buy Germany's claim and then collect from Venezuela. A handsome compliment is paid the newspaper press of this country by the Cincinnative Velskbalt, which asserts that American newspapers have shown great self-restraint in dealing with the matter:

"The possibility of a war with Germany has been almost unanimostly pronounced unthinkable, and anything that mist tend to it has been energetically repudiated. This attitude is very gratifying. It shows that the American press has gain in character and insight. It would be fortunate if the German press initiated this good example."

President Castro, of Venezuela, has tried to provoke misunderstanding between the United States and Germany by offering the latter territory for colonial purposes, according to the Westliche Post (St. Louis). Germany's declination of the proposition is evidence of her good faith. In administration circles it is admitted that Germany has gone further than any other European Power in acceptance of the Monree Doctrine. She has too much on hand in Asia Minor and in Eastern Asia to attempt anything in the western hemisphere. The New-Yorker Volkszeilung, which is Socialistic, deprecates the idea of war, but thus contemplates its possibility as a result of German occupation of Venezuelan soil:

"There can be no doubt that during such a possession of Venezuelan territory things might easily buppen that would lead to a conflict with the United States, especially if the latter sought a present for coming to extremes with Germany. The Monroe Doctrine, whose intellectual progenitor was the English minister Canning, and which Bismarck, according to recent information, once-called a "piece of American impertinence"—forgetting that most of the successful foreign policy of all nations, Germany included, is based on such "impertinence"—this Monroe Doctrine is a true American invention. It resembles those American tools which can be made to serve a dozen different particular tools which can be made to serve a dozen different particular tools which can be made to serve a dozen different particular tools which can be made to serve a dozen different particular tools which can be made to serve a dozen different particular tools which can be made to serve a dozen different particular tools which can be made to serve a dozen different particular tools which can be made to serve a dozen different particular tools which can be made to serve a dozen different particular tools which can be made to serve a dozen different particular tools which can be made to serve a dozen different particular tools which can be made to serve a dozen different particular tools which can be made to serve a dozen different particular tools which can be made to serve a dozen different particular tools which can be particular to the dozen to serve a dozen different particular to the particular tools which can be particular to the particular tools which to the p

"AND THEY THINK I OUGHT TO REST ONE DAY IN

- The New York Journal,

# LETTERS AND ART.

# MR. HOWELLS'S CRITICAL STANDARDS.

I T is not often that a great critic and a great artist are combined in the same man. Yet no criticism is so suggestive and interpretative as that of the artist himself. Such, at least, is the view taken by Prof. Brander Matthews. "Where is there any liquity into the principles of painting so penetrative and so subtle as Fromentie's." he asks, "unless perhaps it is Mr. John La Farge's? Where is there any discussion of the elusive art of acting so acute and so stimulating as Clibber's—unless it is Mr. John have failed in literature and art'; rather are they those who have succeeded; and when accomplished craftsmen are willing to talk freely about their calling, the read of us had best keep silent and profit by what we can pick up." He continues (in The Forum, January):

"Of all the American authors at the opening of the new century, Mr. Howells is easily the most multifarious. It is as a novelist that he has presented himself most frequently; but he has also attempted the stage, althou one of his original dramas had the good fortune to establish itself in the theater. He has revealed himself as a poet of somber imaginations, not may revealed or the stage of the stage and the stage of the control of the

The important part of Mr. Howells's critical work is contained in the following five volumes: "Modern Inlain Poets" (1887); "Criticism and Fiction" (1840); "My Literary Passions" (1869): "Criticism and Fiction" (1840); "My Literary Passions" (1869): "Literary Firends and Acquaintance" (1969); and "Heroids and Fiction" (1961). The most aggressive of these books is the second named, and in it Mr. Howells runs counter to most of the prevailing literary standards. Dickens, Thackeray, Scott, and Balzac, in particular, come under the ban of his criticism, in contradistinction to Jane Austen, George Eliut, and Authory Trolope. Professor Matthews admits that he finds some of this critical writing "too insistent in its tone, too intolerant of the dullards, too impatient with those who persist in liking the things they ought not to dislike." Nevertheless, he declares that Mr. Howells showly obtain for the highest artistic truth:

"However great Scott was, and Dickens, and Thackeray, they were none of them perfect artists; they were great in spite of gross derelictions from the highest standard. This is what Mr. Howells has tried to make plain even to careless readers; and it is for making this plain that carcless readers are not willing to forgive him. Nothing is more certain to arrest progress than a smug satisfaction with the past-unless it is a slavish copying of the inferior models bequeathed to us by our more primitive predecessors. Nothing is more helpful than a clear understanding of the merits and of the demerits of the early masters. The merits are obvious enough, but the demerits need to be discovered and declared before they can serve as warnings. It is not a paradox but a truism that the art of fiction is a finer art to-day than it was when Thackeray was writing-just as it was a finer art in Thackeray's time than it was when Cervantes was writing. As Mr. Howells puts it pithily, it was the misfortune of Balzac that he 'lived too soou to profit by Balzac'; and so Cervantes had lived too soon to profit by Cervantes. Those who refuse blindly to see any blemishes in the art of Balzac or of Cervantes, those who persist in upholding Scott and Dickens and Thackeray as impeccable artists, need to be reminded that ancestor-worship is no longer esteemed the highest form of religion."

The limitations of Mr. Howells's criticism, continues the writer, are not merely the limits of his likings. He is no drifting im-

pressions with never an anchor to windward. He has a solid body of doctrine, and a creed of his own to serve as a test. He demands that art, and more especially the art of fiction; shall deal with life simply, naturally, and honestly,—that it shall tell the truth, the whole truth, and nothing but the truth. "The object of a novel," according to the pertinent dictum which Mr. Howells translated from Sehor Valera, "should be to charm through a faithful representation of human actions and human passions, and to create by this fidelity to nature a beautiful work." Professor Matthews concludes:

"It may be said that Mr. Howells has sometimes seemed somewhat overstrenuous in dwelling upon the errors and the mistakes of the earlier masters; and this charge may be admitted without hesitation. He has had to combat accepted opinious, and the combative mood tempts us to an overstatement of our own case and an understatement of that of our opponents; and quite possibly Mr. Howells has yielded to this temptation oftener than needful. It has been urged also that Mr. Howells has shown himself careless of proportion, in that he has overpraised certain of his contemporaries while overdispraising certain of his predecessors; and it may be admitted that this charge has now and then some slight evidence in its favor. Just as he drew attention to the defects of certain novelists of the past, so also he drew attention to the beauty and the truth which he saw in the work of certain writers of the present, and which the duller senses of the public had not recognized adequately. But they are very careless readers indeed who have asserted that Mr. Howells really sets up Mr. J. W. De Forest as the rival of Thackeray and that he holds Mr. H. B. Fuller as an equal of Balzac. They are not only careless, but perhaps a little stopid also, and even a trifle malevolent. . . . . .

"Mr. Howella does not declare his theories merely to celebrate himself, as M. Zool has been accused of doing. He declares them rather because his character is forever foreing him to bear witness to the truth as he sees it. In criticism as in facton character counts for as much as talent—in fact, character is an element of talent. It matters little whether Mr. Howells is dealing with the art and mystery of novel-writing or whether he is himself applying the secrets of the craft in e.g. etc. have self-applying the secrets of the craft in e.g. etc. have sincerity, Illeral in his appreciations, loyal to his convictions, and little hampered by mere academic restrictions.

# AN AUSTRIAN APPRECIATION OF SWINBURNE.

A LGERNON CHARLES SWINBURNE has been recently introduced to the Austrian literary public by Herr Otto Hauser, a novelist of some distinction, who maintains that the English peet has never had paid to him the appreciation due to his genius. The reasons for Swinburne's comparatively limited fame he finds partly in the fact that his best work "appeared at the wrong time," and partly in his unconventionality. "Besides," he adds (writing in the Nue Freice Presss, Vienna, "his publishers have put such a high price upon his books that many, on that account aloue, have been unable to buy them.

Herr Hauser propounds the theory that some of Swinburne's untamed strength is due to a Northera—probably a Scandinavian—descent. The name, he declares, is itself an argument in favor of this supposition, since "Swinburne "inds an equivalent in the old Norse word "Swinbign",—a combination of wild boar and bear. On the other hand, he ascribes the vivid coloring and sensous beauty of Swinburne's verse to the influence of Rossetti, whose influence over the English port, he says, was deep and permanent. To Rossetti is attributed that artist's institute which enabled Swinburne to clothe every thought and phrase in forms of purest beauty.

The writer analyzes Swinburne's various creeds and theories,
—his republicanism and alleged atheism. He says it is but natural that Swinburne's earlier poems and ballads should have appeared blasphemous to Puritanical English society. They were

"intoxicating"; they "literally choke under roses." Yet the time will come when the world will rise above narrow standards and prejudices, and will realize the masterly genins of Swinburge. He concludes:

"Swinburne is not only a lyrical poet. Since Shikeepeare, no English poet has written dramas such as his, and since Milton there has been no epic poetry such as his. But it is as a lyrical poet that he stands supreme. As a lyrical poet he takes his place in the immortal trimwrate of English literature with the creator of 'Hamlet' and the author of 'Paradise Lost.'"—Translation madel for Tile, LITERAKY DIGISST.

# "EUGENE FIELD: A STUDY IN HEREDITY AND CONTRADICTIONS."

Table above is the title which Mr. Slason Thompson has given to the two-colume biography of his friend, and the wishes this title to be taken literally. It is the purpose of Mr. Thompson to reproduce the man rather than the ambor,—Field as he appeared to those whe knew and loved him for what he was personally. In his daily work, we are told in the introduction, the dominant note was that of fun and convivability. "It was free from acrimony and controversy. He aboninated speech-makers and lampsomed political oracles. He was the unsparing satirist of contemporary pretence," "Neither a sinner nor a saut was the man who wort into an oil bookstory in Chengo and bevildered the matter-of-fact dealer in old cilitions with the inquiry," Have you an interpretated copy of Ilanual More's "Letters to a Village Maiden"? ""He scattered his patrimony gaily, and when

cent was gone, turned with equal gaiety to carning not only enough to support himself, but the wife and family that, with the royal and reckless prodigality of genius, he provided himself the with at the very outset of his career."

chapters give an amusing account of Field's ancestry, showing that he came honestly by that spirit of mischief and flow of humor that never failed him during

The first three

the whole course of his life, and that was one of his most conspieuous traits. "I want all the lappiness out of the world that's possible," he is reported as saying: "and," adds his biographer, "he got it not intermittently and in chunks, but day by day and every lower of the day."

Eugene Field was bern in St. Louis in 1850, but his mother died in his childhood, and he and his brother Rosswell spent much of their boyhood in the East. Field's college and school days were unprofitable. He attended three colleges and partly because of ill-leadth, partly because of his love of "jest foolin", accomplished nothing in any of them. Field's literary education was characteristic of the man. The popular impression that he was scholarly from his youth up is entirely erroneous. Practically all his mental equipment, as far as it was obtained from books, was acquired after he went to Chicago in 1853. On leaving college he went to Europe, spending there, as he says, "six months and my patrimony." He married Miss Julia Comstock in 1853, and between that time and his going to Chicago he worked in many capacities no papers in St. Joseph, St. Louis, Kansas City, and Denver. In each of these cities he left behind him stories of his colossal and mainstaking material isolance.

FIELD AT WORK.

(The Caricature from a Drawing by Scianders.)

Courtesy of Charles Scribner's Sons.

"In each of these cities be was the center of a set of newspaper men, actors, politicians; everywhere he was welcome, everywhere all license of speech, both spoken and printed, was permitted him." While his satire and wit gave him a wide newspaper reputation, he had accomplished little of any literary value up to the time when he began work on the Chicago Morning Acres. He had up to that time taken in what literary education he had "by the pores"; but shortly after his arrival in Chicago he was "inoculated with a ravenous taste for the English literature of the fifteenth and sixteenth centuries," "For three years Mallory's' History of King Arthur and Knights of the Round Table ' was the delight of his poetic soul,-and its effect was traceable in almost every line of his newspaper work. He discovered a veritable mine of old British ballads, and he began sipping at the spring which in a few years was to exercise such an influence on his own work," He read, also, translations of Percy's "Reliques of Ancient English," Bell's "Ballads of the Peasantry of England," and a host of other books of like nature,

A little later Field made lie acquaintance of Dr. Frank W. Reilly, who was to exercise the most potent influence on his literary bent, for it was from Dr. Reilly that Field learned his love of Ilorace, the Noctes Imbrosium, the "Reliques of Father Prout," and the pooms of Béranger.

In August, 1883, Field started his column called "Sharps and Flats." He wrote nearly every line of this column, and practically everything that he wrote after 1883 appeared at one time or another in it. "No man ever made less of a grind in preparing copy for the printer. He seldom arrived at the office before eleven and never settled down to work before three o'clock. The interim was spent in puttering over exchanges, gossiping with visitors, quizzing every other member of the staff, meddling bere, chaffing there, and playing hob generally with the orderly sequence of events." When Field got ready to go to work, "peace seltled on the establishment for about three hours." He worked harder and longer at his play than at his work, but out of that play was born the best of all that he has left. "His daily colourn was a cystallization of the busy fancies that were running

through his head during all his hours of fooling and nights of light-hearted pleasure. He trod the footpath to popularity and fame with a buoyant and merry heart. "The two books that contain what to the last he considered his choicest work, 'A Little Book of Western Verse' and 'A Little Book of Profitable Tales,' were compiled from the writings that flowed from his pen when he worshiped most assidously at the shrine of the goddess of contedy and social intercourse."

The companionship of his fellows, says Mr. Thompson, was as necessary to Field as the air he breathed. He was exceedingly fond of the theater, and pregathered with all the famous actors and actresses that passed through Chicago, whom he advertised in every possible way, from inventing impossible biographies for them to crediting them with with wonderful children which never were. In the same way he reudered famous any restaurant where he and his friends had their midnight gatherings. The famous Boyle's was one such place, and later he played the same good turn to General A. C. McChurg's book-store, where the "Saints and Sinners' Corner," as a meeting-place for bibliomaniaes, becape famous throughout the country.

Field's health, never robust, succumbed to the two forms of dissipation he indulged in—pastry and reading in bed. In 1889 he and his family went to Europe. The subscription editions of

Coortes, of Charles Scriber's 'Sons.

the "Little Book of Western Verse" and "Little Book of Profitable Tales" were then in press. Previously to this he had published "Culture's Garlând" and "The Tribune Primer," the latter now exceedingly rare. The European trip benefited him but litle. The suddlen death of his son Melvin affected him deeply, and when he returned home it was to settle down in the "most and rust of bibliomania," as his friend Cowen called it, for it was as late as 1837 that. Field accurated his taste for trare books.

Field had a wide acquaintance among politicians. He frequented the capitals of Missouri, Colorado, and Illinois, and spent weeks in the lobby of the capitol. It was the comprehension of men and not of measures he was after. He wrote much concerning politics, a great deal of it being of a personal nature. Sometimes the entire column of "Sharps and Flats" would be devoted to paragraphs of this sort. Mr. Thompsou says of his politics: "Field was never in sympathy with the independent lines upon which The Morning, Vers was run; he was a thoroughgoing partisan Republican."

Of serious views on political, social, and economic questions, however, Field had none. His study was literature, and the domestic and social amenities of life; yet "for more than a decade, and until he became enamored of books and bibliomania, Field was the most widely quoted political paragrapher in America."

After his return from Europe, Field did more and more of his

work at home, and his daily grind in "Sharps and Flats" showed the effects of his reading and study. Technically his work increased in perfection, and it was in the succeeding years that "With Trumpet and Drum," "Second Book of Verse," "Echoes from a Sabine Farm," "Holy Cross and Other Tales," and "The Love Affairs of a Bibliomaniae" were published. "I believe," he said,"that if I live I shall do my best literary work when I am a grandfather." The "if I live" was prophetic. Just when he was settled in the home he had so long dreamed about, at the height of his fame, and having completed the work that pleased him better than any he had done-"The Love Affairs of a Bibliomaniac "-he was taken ill. His illness was not at first deemed serious, but on the night of November 4, 1895, "death stole upon him while he slept." It was such a death as he had often said would be his choice,-"just a dropping to sleep here and awakening vonder."

## STATE CENSORSHIP OF THE DRAMA.

A BILL of a decidedly novel character has been drafted by Assemblyman John F. Ahearn, of Troy, N. Y., and was introduced by him in the New York state legislature. It proposes, in brief, that all new plays shall be passed upon, and

all actors and actresses heensed, by a state board consisting of five persons, who are to be appointed by the governor, and who must have lad at least ten years' experience in the dramatic profession. Supervision of the ballet is also provided for in a section giving the board of examiners the power to "determine the fitness of all public processions, theatrical presentations and productions." In an interview explaining the purpose of his bill, Mr. Abears asys:

"If the bill is adopted and becomes a law, we shall have not only a purer atmosphere about the stage, but the people will be protected against this buncoing by cheap actors and managers. The matter has long been on my mind, but it was brought forcibly to my notice recently by witnessing a succession of such things as Zuaa, "Sapho, etc. I became convinced that such plays ought to be stopped. We ought to have a law that will sumpress such plays."

The New York Dramatic Mirror, while admitting that "the stage suffers from plays that ought not to be permitted," thinks that legislation should be the last corrective resort for such evils. It says:

"The introduction of the theater and all that relates to it into the realm of politics never could be tolerated, if one is to look seriously upon Mr. Ahearn's proposition. If this bill should by any remote chance-become a law, the political gossip columns of the newspapers would at once 'mention' the names of many persons known to the public as actors as candidates for positions on a board whose powers would be limitless for almost any purpose foreign to the intention of the theorist who has formulated this measure, and the dominant political 'boss,' of course, would be potent in the selection of candidates for positions on the board. This is but one of many objections-most of which go to the merits of the Ahearn proposition-that would condemn any measure of this sort at its inception. Touching on the vital possibility of the scheme, it may be said at the beginning that of the few actors that would be competent to fill places on the board probably not one would serve, while all no doubt would ridicule the plan. It is useless to point out the other features of the bill that appeal only to a sense of humor.'

The Brooklyu Eagle, however, thinks that the subject can hardly be dismissed in such summary fashion. It says:

"Under the present system the highest-priced theaters in this country frequently alternate pure and healthful plays with vile concections of French indecency, designed not for patronage of young girls and boys, such as American theaters draw, but for audiences of selected expertuess in amusing depravity. This happens to be a decent season in the theaters, so no flagrant instances of this kind have called for general comment. But every reader will recall seasons when "The Girl from Maxinis," "The Turtle, "The Conqueron," Zata" and similar plays have bear tracted in the most reputable theaters of the country and have attracted auditors, the great majority of whom could take nothing but harm from them. Whether a censorship would improve this condition is an open question. But the fact that the so-called censorship of public opinion does not prevent it is patent to everybody. That being so, it is fairly open to any citizen or lawmaker to try to find a better way. If W. Alearnt thinks he has found it, his proposition is entitled to fair discussion on its merits, when the nature of the proposition is fully known," stilly known," stilly known," is fully known," it stilly known, it stilly known, its fully known, it stilly known, it still known,

## THE KAISER'S SPEECH ON ART.

THE speech of the German Emperor to the Berlin sculptors has been the subject of much and varied comment in the press. The two most important reviews that have so far reached us are those in the Post (Berlin) and the Kölnische Zeitunger. The Post would not have the Emperor's speech to the sculptors interpreted as an authoritative intimation of the path that they were to follow, or as a desire to influence them in favor of any particular school of art. The Emperor was not speaking as an artist to an artist, but as a monarch to his people. It further criticises the analogy of the art of classical times and of the Renaissance as applied to modern times.

The Kölnische Zeitung devotes a bong and earnest criticism to the Emperor's address, and, while admitting that is true to the traditions of his family and his education, deplores the fact that William II. should not have taken a place in history as the leader of the German art of the future. Some of the most striking passages of the review are here quoted:

"At the hanquet given to the artists of the Avenue of Victory, the Kaiser again delivered one of his characteristic speeches, in which he is wont to satisfy the necessity of his being to take part

in every sphere of modern life. This time it was art, which in the form of a toast was made the subject of a critical examination. William 11, in his love for art far exceeds the usual limit of princes in things artistic, and is a thorough connoisscur in the history of art. It is, therefore, readily understood that in the warmth of his heart, in view of the completion of his great enterprise, the image of the Renissance and of its art-loving princes should rise before his eyes. To proceed to find fault with critical officiousness and to detract from the imperial praise of the artists by means of comparisons would be to display a want of taste. An emperor who at the festive board thanks his artists is such a fine picture that its colors must not be injured. The monarch, however, in addition to his thanks, added some severe critical remarks upon modern art which sounded like a call to battle. These remarks will be seized upon by the outside world, and will here and there impede the laborious progress of the work of reconciling the public to modern art in so far as intellectual includence and doctringies obstinger will try to find convect for their views in the remarks of a young and gifted emperor.

"In all other spheres, the Emperor is a fine child of his age, who looks forward and not backward, and delights in innovation, If he dislikes modern art, he must have good reasons of his own for doing so, and these reasons have a more important significance than if they were held by an old man. The profound dislike of William 11, for modern art dates from the epoch of unturalism and its custom of painting poor people. That school was, indeed, little calculated to insure enthusiasm in those who had the usual views and tastes of sovereions, but it is no secret that the degree of His Majesty's dislike was determined by the fact that in the Emperor's entograge these portrayals of scenes taken from the proletariat were curtly characterized as 'Social Democratic,' and the artists of this school were suspected of entertaining Social Democratic views. Since then, William II, has paid no attention to modern art and its future development. . . . He, therefore, remains true to the viewpoint of his education, which, like that of all educated persons, was founded on the idealist and esthetic contemplation of the antique as the criterion of

"What the Emperor characterized as 'advertisement' is an nwakening of general artistic interest by the victorious campaign in behalf of new aims. . . . For this reason there would have

KIPLING'S NEW POEM IN CARTOON.

been great rejoicing if William II, had assumed a strenuous and resolute leadership in this sphere as he has done in others. A new splendor would have dawned on Germany. It was not to be; and it is well known who the idealists are who have come between the Emperor and the German art of the future. The history of art will judge them and will say that they prevented William II. from accomplishing a work to which for him, above all men, the age had led up. But the German artists will pursue the thorny path to the goal to which the spirit leads them for the very reason that they are true idealists."-Translations made for THE LITERARY DIGEST.

# THE OUTLOOK FOR SOUTHERN LITERATURE.

MANY reasons have been given to account for the backward. ness of Southern literature, and it is generally assumed that the conditions bred by the Civil War are chiefly responsible for the literary barrenness of the South. A recent Southern writer, the Rev. J. M. Hawley, in analyzing the influences that have contributed to make Southern literature so "fragmentary and insufficient" that "it can not be said that a literary atmosphere has ever existed in the South," thinks that we must go even back of the war to get the viewpoint necessary to the consideration of this subject. Writing in Things and Thoughts (November-December), a new literary magazine, published in Winchester, Va., he says:

"In the ante-bellum period the snirit of contentment that pervaded Sonthern society was unfavorable to the production of a With libraries in almost every mansion, filled with the English classics, the owners felt little need of a literature of their own. Nor was there the stimulus, much less the necessity, that impels genius to put forth its best and strongest efforts. . . . Southern talent sought and found a more congenial and remunerative field. In the sphere of statescraft and jurisprudence it was at its best. The Southern mind craved excitement. Argumentative rather than speculative, prosaic rather than romantic, it preferred the contests of the forum to the quiet seclusion of the cloister. Oratory was its never-failing delight. And the South sent to the rostrum and to the halls of legislature orators of world-wide fame. We have only to mention her Henrys, her Haynes, her Clays, her Calhouns, and her Lamars. What jurist of America has surpassed in clearness of insight and keenness of logic John Marshall, of Virginia? And when we consider the political treatises of great Southern statesmen, we shall find nothing surpassing them, in vigor and versatility, this side of classic With attractions so great and rewards so ample as those offered by politics and jurlsprudence, it is not surprising that the master minds of the South had scant predilection for literary pursuits."

The presence of slavery, more than any other single cause, we are assured, retarded the growth of literature in the South. Southern civilization had grown up with its very foundations built upon slavery. The institution must be commended by orator or author, or not discussed at all, since anti-slavery sentiment was franght with peril to the whole social fabric. "In the ear of every poet and author who dared approach the forbidden theme." declares the writer, "a sleepless specter seemed to say, 'llands off." Under such conditions and limitations Southern literature could attain only a feeble and one-sided growth. This mental bondage was fatal to the full development of literary art. After slavery came the war, and with it "disappointment, poverty. physical suffering." Mr. Hawley continues:

"The South passed through a period of adversity and suffering scarcely paralleled in the history of man. Her social system was a complete wreck. A more unpropitious time for literary achievement can scarcely be imagined. Many a soul, pregnant wth celestial fire, could only wait and hope in the midst of universal disorder and disconragements. Many a harp hung silent upon the willows. Unmerciful disaster seemed to mark the poet and the author as her special prey. Who can think of William Gilmore Simms following, at short intervals, two wives and nine

children to the grave, the last of them two boys of especial promise, with home and library in ashes, without feeling the unutterable nathos of human life? Who can think of Paul Hamilton Hayne-'poet-laureate of the South'-losing home, library all in the bombardment of Charleston, and living for years in a rude cottage amid the pines of Georgia, with the bare necessities of life around him, without feeling that beartless destiny seeks a shining mark? And Timrod-poor Henry Tlmrod-who can think at all of his struggles and sufferings without tears? With shattered health, wrecked fortune, and pinching poverty, can we wonder that the harp fell from his nerveless hand? His own letter to Hayne, his life-long friend, a year after the war, shall tell the story of his blasted hopes: 'I have now backed on for four months, and as yet have failed to receive a single month's pay. I confess the truth, my dear P-, I not only feel that I can write no more verse, but I am perfectly indifferent to the fate of what I have already composed. I would consign every line of it to eternal oblivion, for-one hundred dollars in hand! And who can think of Sidney Lanier, with failing health and empty purse, but with a thousand songs singing in his heart, appealing to the head of a department in Washington for a common clerkship, only to be informed at the last moment that the vacancy had been filled by another applicant, without feeling the cruel irony of fate? Significant in meaning, as touching in pathos, are his words to Bayard Taylor: 'Perhaps you know that, with us of the younger generation in the South since the war, pretty much the whole of life has been merely not-dying. In view of these conditions and facts, we wonder, not that the Southern muse struck a feeble note, but that it found heart to sing at all."

But a brighter, happier, more auspicious day has dawned for Southern literature. The literary achievements of the last two decades-of such writers as Thomas Nelson Page, Joel Chandler Harris, George W. Cable, Mary Johnston, and Madison Cawcin -in themselves mark something of a renaissance, and to Mr. Hawley they are prophetic of the future. Out of the "heroic i past" of the South, with its deeds of daring and devotion to duty, shall grow the coming literature. He concludes:

"The marvelous outburst of the martial spirit in '61; the Spartan-like courage of the combatants; the thrilling adventures; endurance unparalleled; greatness even in disaster; the building of a new life upon the ruins of the old; the growth of fraternity between the sections; the cementing of a vast population in an enduring unity; the beginning of a deeper, broader, mightier national life-these are the treasures of which an enduring literature will be made. That this work, at once fascinating and important, will be adequately and faithfully done, who can doubt? With it every true American heart beats in sympathy. When this task is accomplished, art will reflect in bright tights and brilliant colors all that is best and sweetest in human life, all that is noble and enduring in modern civilization."

## NOTES.

In the recent death of William Ellery Channing at his home in Concord, Mass., American literature loses one of its most distinctive personallies. Says The Dial: "As the husband of a sister of Margaret Puller, as the close associate of Emerson, Thorean, and Hawthorne, and as one of the best-known American poets of half a century ago, his life linked the twentieth century with a past that now seems remnte indeed, not so much for the years that separate us from it as for the changes that those years have brought in our national ideals. Altho he broke the silence as recently as s886 with a poem on John Brown, his work was mainly done nearer fifty than fifteen years ago, and many who took note of his death the other day must have learned at the same time with no little surprise that he had lived on into the new century."

amnsing literary blunder in a large-paper edition of Milton's ode "On the Morning of Christ's Nativity," published in Chicago, is noted in The Record-Herald of that city. In the twenty-seventh stanza of Milton's famons poem occur the lines:

But see the Virgin bles!
Hath laid her Habe to real,
Hath laid her Habe to real,
Haw'n's voungest teemed star
Hath fix'd her polish'd car,
Her sleeping Lord with handmaid lamp attending;

In the Chicago version "handmaid" is converted into the very prosaic What is more, the error was repeated, without correction "hand-made or comment, in the Christmas number of The Critic.

# SCIENCE AND INVENTION.

# IS AMERICA BEHINDHAND IN SCIENCE?

THAT America's position in the scientific world is an inferior one is asserted by Carl Snyder in *The North American Review* (January). He does not deny that we have produced great men of science, one that we have produced great men of science, one one that we have many to-day who have done gennine and distinguished work. In the field of applied science, too, no nation has a prouder record, as the names of Fulton, Morse, Bell, and a hundred others show. And yet with all this we are lacking, Mr. Snyder tells us, in the true scientific spirit, and have not done our share in a single one of the great lines of investigation that are advancing modern civilization. We quote the first of his illustrations. He says:

"Pasteur's memorable discovery that the fermentation of beer was due solely to the presence of minute organisms (microbes) was made early in the sixties. That was forty years ago. Step by step the ideas of Pasteur grew and broadened. Applied to the disease of the vines, then to dving silkworms, then to sheep cholera, they are estimated, before his death, to have saved to Prance alone a sum greater than the cost of the Prussian war. with the colossal indemnity demanded by Bismarck thrown in. Pastenr's own researches culminated in the germ theory of contagions. A young English surgeon, now Lord Lister, applied his idea to the method of surgical operations; this step was enormous. To-day, operations are common that were unheard of thirty or forty years ago; nnknown diseases, such as appendicitis, have been discovered and a radical cure has been found for them. Germans like Behring and Koch, Japanese like Kitasato, a crowd of disciples and followers of the Master, as he is known in France, have extended Pasteur's ideas to the treatment of diphtheria, lockjaw, anthrax, and many other scourges. Thanks to him, hydrophobia has been robbed of its terrors. At last, medicine begins dimly to emerge from quackery and empiricism, and bids fair in time to become a true science. All this belongs to the present day, most of it to the last decade or so, yet in all this brilliant list of discoveries and applications no American name is to be found, even tho we have a larger number of medical schools, medical professors, and medical students than any other country in the world.

"In another field. To-day, ocean travelers, two hundred miles of from land, talk with friends by a telegraph that crosses spin hat crosses spin that crosses spin that crosses the calmination of a long train of patient researches on the proof of many workers in many lands. Clerk Maxwell, the English physiciat, had predicted the common nature of electricity of high spin or common that or of electricity this surmise, thetra, saided and advised by his patron, the cran won Helmholtz, made his epochal discoveries at Carlsruhe. All the world knew of it thirteen years ago.

"A host of experimenters were instantly in the field. The dicitate coherer which made wireless telegraphy possible was the independent discovery of Professor Branly, of the Catholic University of Paris, and Prof. Oliver Lodge, of Liverpool. Notable contributions have been made by the Italian Professor Righl, by the Germans Professor Slaby, Count Arco, Professor Brann, by Professor Prece, of England, and Professor Bose, of Calcuta in India, to name but a few. It is to be noted that Marconi, like Morse, was an untrained amateur. It was a free field; no American entered, Not with all the stimulating examples of Edison, Teal, Elihu Thompson was there one Yankee genus stirred to the task."

And so Mr. Snyder goes on to show that the we are the first steel-makers in the world, the last volume on metallurgy contains, among hundreds of Belgian. Datch, German, English, French, and Russian contributors to the science, the names of only two Americans, Professors Gibbs and Howe, neither familiar to the general public. The great series of investigations on the phenomena of electricity in gases, including the discovery of the so-called cathode phenomena, the Crookes tube, the radiometer, the Roentgen rays, leading up to Professor Thomson's epochmaking corpuscular theory, recalls the name of no American contributor. In chemistry, whose progress in recent years has been so vast that no one man can be an expert in more than one or two of its branches, the primacy has shifted from country to country, so that now a Sweele, now a Norwegian, now a Frenchman, or a German, has been the world's greatest chemist. Yet the history of the science might be written, according to Mr. Snyder, without noting the work of more than a single American, and this one, Prodessor Willard Gibbs, of Yale, is unknown here except to his fellow workers in science. The state of the work in this country is sufficiently indicated, the writter goes on to say, by the fact that Professor Gibbs's work was practically unknown nutil dug out of the Connecticut archives by a Dutch chemist twenty years after it had been done. There is not space to give all of the examples that are presented by Mr. Snyder. He says:

"It is pretty much the same story wherever we turn. What is the cause? Why is it that this people, now marching to the industrial conquest of the earth, has done so little, comparatively, in the realms of scence? I leave the answer to others who may love large generalizations more. My purpose was rather to indicate a condition than to propose a remety. It is certain we do not lack for colleges and institutions of 'higher culture.' The sums which our Cressues scatter with lavish hand are the won-derment of Europe. We are a clever people, undoubtedly; this we have no need to be told; our newspapers and orators do not miss an opportunity of telling us so. We have done big things; and it is, perhaps, just for that reason, just because of the rich prizes of business, that the Faradays and Claude Bernards are not to be found annong us."

We need in this country, Mr. Snyder tells us in conclusion, more great institutions for the encouragement of research; we need the independence and leisure of the German university system. We need some great scientific club, where scientifies nen may meet and keep abreast of scientific progress. More yay build laboratories and endow professorships, but it can not create true scientific enthusiasm. That this is coming there are already signs, and it can not come too soon.

# A NEW THEORY OF NERVE ACTION.

THEORY of nerve action advanced by Prof. Albert P. Mathews, of Chicago University, at the recent meeting of the American Society of Naturalists in that city, has attracted much attention, owing to the fact that it furnishes an explanation of so many different physiological phenomena and harmonizes so many of the recent conceptions of physics and biology. Professor Loeb, of the same institution, regards his colleague's theory as "the most nearly fundamental physiological generalization in fifty years." According to Professor Mathews, nervous phenomena are at once chemical and electrical, his theory reducing chemical and electrical stimulation to a common measure. His hypothesis makes clear the action of anesthetics, shows why heat diminishes nervous irritability, explains drunkenness, and, it may even be said, clears up many hitherto obscure vital phenomena. In The Sun (New York, December 31) a brief summary is given of Dr. Mathews's discoveries, which, stated in the simplest form, are as follows: The motor nerves consist of a colloidal or glue-like substance just on the point of jellying, something like partly cooled gelatin. The jellying of this nerve substance corresponds to the stimulation of the nerve, and is brought about by the action of atoms or atomic groups carrying negative electrical charges. The particles of the nerve in the unstimulated or glue-like state carry positive charges. Thus, says Professor Mathews:

"Whenever in any part of a nerve negative charges are in excess the nerve is stimulated, that is, the colloids pass from a solution to a jelly. . . . . .

tion of the colloids is rendered more permanent. It increases as the nerve approaches the gelation state.

"Heat diminishes the irritability of the nerve by rendering the solution more stable; cold increases it by rendering it less stable. At high temperatures gelation takes place and the nerve is stimulated."

The different kinds of stimulation corresponding to the various senses are also explained. In mechanical stimulation (touch) the colloidal particles are forced together:

"As they coalesse their surface becomes less. Less positive charges can reside on it, and part of the negative charges previously induced in the surrounding water are set free and immeitately precipitate the next group of colloids. These in interturn set free negatives which precipitate the next group, and so the nerve immales is carried."

Chemical stimulation is due, as has already been said, to the action of negative electrical charges, and the reverse action, the inhibition of stimulation, or poisoning, is due to atomic groups having positive charges. The degree of either depends on the number of charges, or "electrons," that are revolving as satellites about the atom. As these vibrating charges, according to the electromagnetic theory of light, give rise to luminous radiation, stimulation by light (sight) is explained. The theory explains anesthesia because all anesthetics dissolve fat, "They reduce the irritability of the nerve or protoplasm because the colloids in the nerve are largely fat compounds and more soluble in a mixture of ether and water than in water alone. All anesthetics render the colloidal solution more permanent and prevent gelation," In drunkenness, the alcohol dissolves the colloids in the highly sensitive brain-cells, making the solution more stable, reducing the power to send motor currents to the muscles. Snakepoison coagulates the nerve colloids, but alcohol dilutes this substance and is thus an autidote.

The Sun correspondent tells us that this interesting theory was formed as follows:

"W. B. Hardy, of Cambridge, England, showed some time age that the colloidal solutions carry on their particles negative or positive charges of electricity, and can be precipitated by the opposite charges. It has long been known that the nerve was made of proteids, and that whenever a nerve impulse was transmitted it was accompanied by a current of negative electricity. Recently Dr. Jaquess Lock, who showed a year ago that sodium elhoride solution would stimulate the heart to increased action, and who has since been working to determine how the sodium accomplished that end, . . . began investigation into the influence of ions fatomic groups] on muscle stimulus.

"Dr. Mathews, a colleague of his, took this up at once and began a series of experiments with the nerves of frogs and other animals, which quickly showed that not the positive, or sodium, but the negative ebloride ion was the determining factor. He was led by his experiments to form the hypothesis that the nerve stimulus was similar to the precipitation of collocial solutions by the same substances as described by Hardy, and at once found his hypothesis satisfying every condition. He found, in short, that what happens in the nerve when it is stimulated is nothing more than that it has a tendency to [ell."

"Finding then that the particles of colloidal solution in the merce had positive electric charges, he next discovered that they induced in the water which holds them in solution negative charges about themselves. When a mechanical jar causes two or more colloidal particles to coalesce as raindrops on a window do when it is struck by a blow, the surface of these, upon which the charges reside, is reduced, some of the negative charges are released and attract to themselves some of the positive charges are on the neighboring particles, causing these in turn to coalesce in order to reduce their surface, and thus, in turn, freeing other negative charges which affect the next layer. Thus is created that negative current or negative variation.

"Dr. Loeb, taking up these experiments, at once found them fitting in with his, and knowing that muscle is, like the nerve, colloidal in nature, had at once at hand an explanation of muscular contractility—one of the most difficult problems science has

had to contend with. For it at once became evident that the negative current, or motor impulse, entering the nerve, precipitated the colloids therein in the same way and thus contracted the nerve."

So far as can be learned from the daily press, which is at present our only source of information, the new theory is being kindly received by scientific men. The Times (New York) prints interviews with a few representative specialists. Dr. Edward C. Spitzka said to its reporter.

"This work seems to be based upon scientific principles. Very possibly he has approached the kernel of an important solution." Dr. George F. Strady said:

"This theory is rather a striking one, and apparently very plausible, in view of the fact that it is founded ou good scientified principles of induction. Of course the theory is in its tentative stage, and more experiments are required before it can be positively affirmed, but there seems enough in it to command the attention of scientific men. The explanations made by the distinguished professor are very ingenious, and are based on well-known physical laws. In some respects this is a new discovery in the matter of explaining the facts, altho many of the facts themselves are matters of long observation among experimenters, and he has also acquired some new facts in reference to the tent of the control of the control

"The position taken by Dr. Mathews is a very broad and comprehensive one, and it is impossible to say at this time what its ultimate outcome may be in the way of its application to practical therapeutics. At this stage it could hardly be consider important except in extablishing a general principle in outlining further work and experiment.

Dr. W. J. Gies, instructor in physiological chemistry in the College of Physicians and Surgeons, has known Dr. Mathews for a long time, and said that the generalizations of the latter were important and ingenious. He is quoted as follows:

"It will clear up mysteries connected with the functions of the nerves and should have not be whole question of the relation of the nerves to the rest of the body. This theory will go a long way to explain the changes that take place in the nerves who a man becomes intoxicated or the neural changes that account for the effects of anesthetics. It may be regarded as one of the nost important generalizations in biology made during recent

# SIZE AND MASS OF THE VISIBLE UNIVERSE.

H OW large is that part of our noterse that we can see? And how much does it weigh? These would seem to be hopeless problems and ones whose solution would lack profit. Yet astronomers and physicists have often tried to answer them, with varying success. A recent attempt made by Lord Kelvin is thus described in The Popular Science Monthly:

"The data for Kelvin's investigation are as follows: The part of the universe visible to us may be considered to lie within a phere having a radius equal to the distance of a star whose parallax is one thousandth of a second of arc. This distance is about thirty thousand million million kilometers; a distance so great that light would require about three thousand years to traverse it. The number of stars, luminous and non-luminous, within fluis appeare, Kelvin estimates to be something like one thousand million. This agrees well with the figures of Newthonian and the star of the star of

"Now, if these thousand nillion suns had been uniformly distributed within the sphere in question, and had started from rest twenty-five million years ago, they would have acquired under the law of gravitation about such velocities as the stars are now observed to possess; or, if thousands of millions of years ago they started from rest at mutual distances assunder, very great in comparison with the radius of the supposed sphere, and so distributed that they would now be temporarily equally spinced in that sphere, their mean velocities would be of the same order as that actually observed. A non-uniform initial distribution of the suns would give higher velocities for the stars than the observed values; and any great increase in the assumed number of suns would require far greater velocities than the observed values. Hence kelvin inters that the amount of mass in our two thousand million times on ratio is muse.

"That there would be plenty of room for a thousand million snas in the assumed sphere is shown by a striking calculation made by Kelvin. Thus, if the sams were placed severally at the centers of the thousand million cubes into which their enclosing sphere may be supposed to be divided, then each sun would be mealy tifty million million killion killion each and of its six nearest neighbors. This distance is a little greater than the distance of the nearest Keel stars from our solar system."

## WONDERFUL ARCTIC MIRAGES.

SOME remarkable phenomena of atmospheric refraction to be seen in the arctic regions are described by Dr. G. W. Harvey in Popular Neimer News (January). The ordinary music is stationary or dissolves slowly, but the appearances witnessed by Dr. Harvey were

constantly changing. He tells his story thus:

"We were anchored in Norton Sonnd, Alaska, and about twelve or fourteen miles from land. To the south and west of ns was a low range of mountains stretching back and up from the Sound to various altitudes, but in no case reaching a greater height than filter. The hundred feet. The

"I began to look about me. There were no clouds within wearly degrees of the horizon. There was no haze either; not even in the dim distance, and all the atmospheric conditions were seemingly most undavorable for mirage effects; yet every mountain in the range to the south and west of our ship seemed ying in this related particular of mature.

"One of the most striking reproductions of this mimicry was that of a revolving and disappearing double gun-turret and its ordnance. The round turret would come slowly up out of the summit of the mountain, and when a proper height was reached a gun would be thrust from its side and then as suddenly withdrawn. It might reappear in a moment or the gun on the opposite side be thrust out. Again they would be run out from both sides simultaneously, to be withdrawn in succession. After this realistic gun-play the turret would slowly settle back within the mountain-top to reappear in a few moments in another rôle. Perhaps upon its next appearance there would be but one gun used. This would be run out from the turret's side, and instead of being withdrawn as in the former play the turret would swing half around instantly with gun in position. One could hardly escape the idea that there was a mighty battle being fought with heavy artillery. The only thing lacking to make it decidedly real was some smoke and thunder.

"One other specter was that of a volcano, and what made it all the more vivid was the fact that in coming through the Alcutian Islands we have seen two smoking mountain cones. This spectral volcano came slowly up from the mountain-top and assure train volcano came slowly up from the mountain-top and assure a truncated form, then a red spot appeared in its center, which gradually developed into a lund glow and spread until one side of the cone was seemingly melted off and ran down the side, leaving the other intact."

Sometimes a tunnel would appear in the body of some mountain, and would slowly turn into an open cut or canal, which widened until part of the mountain became an island that finally seemed to vanish in the distance. Sometimes a number of tunnels would appear and evalesce, as if part of the mountain was being mincel away. At another time the mountain was being mincel away. At another time the mountain would rise into a lofty and rugged eminence, with a wide plateau on one side, which presently became clothed with trees, or a number of the mountains would rise into lofty heights separately, and then run together into one huge wall. A triangular opening would appear in this, base upward, and this opening would spread until the mountain separated into two cones, one of which rose and floated off while the other settled into the earth. To quote again:

"I have given you but a few of the multitude of these wonderful refractive transmutations, for intermixed with these most notable ones were all manner of images, such as huge mounted cannon, gigantic clubs raised by invisible hands, captive ba-

loons, cocks of hav. domes, towers, palisades, pyramids, and obelisks, giants in acrobatic contortion, immense stairways reaching upward to invisible mansions. anvils equal to the hammer of Cyclops. lakes and tarns of great beauty, tops, toad stools, tumblers and thousands of other forms so numerous and fantastic that one could easily imagine himself a beholder upon

ARCTIC MIRAGE AFFECTS

the day of creation when all things of earth were plastic, and being modeled and given shapes and forms as best pleased Him whose power and wisdom fashioned the universe.

"The crowning effort of all this phantasmagorical display was the deadly swoop and rending struggle of a mighty bird of prey. The mountain in front of us reared itself into a slender pinnacle, which began to uarrow in at about its 'npper fourth until a complete separation took place. The upper piece assumed in the course of a few moments the outlines of an immense eagle or rec, which bovered threateningly over the rapidly settling pinnacle until the mountain had assumed ulmost its natural contour, which is swooped and seemingly struggled for a moment with its preparation had passed from the image back to reality or until the apparation had passed from the image back to reality.

"The accompanying diagrams are some changes noted in Brisbane Island, which lay some sixty miles to the north of us, on the evening following. These all occurred within an hour. I learned afterward in conversation with people who have spent anny summers in the Aretic that such marvelous displays as I had beheld were of commou occurrence in June, almost any where in the Bering Sea."

New Ceramic Substance.—A new artificial clav has been introduced in Germany, which, according to the Montteev de la Ceramique et de la Verereie, is attracting much attention in that country. The substance of which it is composed can be moded also into bricks, ties, etc. "This new substance is composed of sand," Meudon white: cement, liquid gibe, mily petroleum, mixed according to a special method. The result is a platewise the composed of the substance are notable for the substance are notable for this substance are notable for

their sharpness of edge and angie, for their resistance to atmospheric influences, and their incombustibility. They are also non-absorbent of moisture. The substance can also be used in the manufacture of artificial stone for building, in all colors, and capable of being molded into ornamental forms according to the architect's plants. . . This artificial clay has been tested at the Charlottenburg laboratory with most favorable results. As it is made so easily and without special machinery it is believed that the small builder can use it and that the price of building will be reduced thereby. In quoting this description, Cosmon (Paris, December 21) remarks that "if the process of manufacture has been patented, as its probable, the method can hardly benefit the least process of the control of the process of the control o

# CAUSE OF THE VARIATION OF LATITUDE.

THE most sensational astronomical discovery of recent years was that the carth's poles are not fixed, but more slowly over its surface, describing small curves. This was first suspected from the fact that the latitude of certain places, when measured with 'the greatest care, was found to vary slightly, and the phenomenon is hence generally known as "the variation of latitude." The the announcement that the poles are not fixed points was received with incredulity at first, it is now accepted by all astronomers; but they have not yet agreed on the explanation. One of the latest is thus discussed in the Kevne Ncientifique (December 14):

"Among the different causes that have been suggested to account for the phenomenon of variation of latitude is that proposed by Halm of the Edinburgh observatory, who ascribes it to the sun's magnetism. This scientist asserts that he has demonstrated that the eleven-year sun-spot period and the still longer period of 50 or 60 years that seems to exist for the spots and for the aurora borealis, appear in the movements of the terrestrial pole. He has noted the same periodicity in the secular variations of the obliquity of the ecliptic. His conclusions have been contested by Thackeray, of the Greenwich Observatory; but Halm returns to the subject in an extended article in Astronomische Nachrichten (No. 3649), in which he shows the curves that represent, on the oue hand, the frequency of auroras, of magnetic disturbances and of solar spots, and, on the other hand, of variations of latitude, of the obliquity of the ecliptic and of the sun's 'right ascensions,' The analogies presented by these curves, which show a double periodicity, are to be explained, according to Halm, by the action of the sun on the magnetic axis of the globe, which is at an angle of about 12° with the axis of rotation, and whose asymmetric position thus gives rise to perturbations of the earth's movement of rotation. It is remarked by Ciel et Terre that these facts are doubtless curious and worthy of careful investigation, but that the relations asserted by Halm are a little vague and that the observational data are not numerous enough nor homogeneous enough to support so minute an unalysis. We must not forget that we are dealing here with hundredths and thousandths of a second. These microscopic variations seem a rather fragile basis for so vast a theory."-Translation made for THE LITERARY DIGEST.

A Safety Steamship.—After the terrible catastrophe of which La Benegogne was the victim, the Tamily of one of the passengers on the til-fated ship established a prize for the best plan to avoid disasters of this kind. The jury to which the decision was left has decided that none of the plans hitherto presented solves the problem, but some of them are interesting. The Revue Technique publishes an analysis of the devices entered in competition for the prize, among them that of M. Goulaieff, naval constructor of the imperial Russian navy, who proposes a hull of novel form and proportions with triple cellular sides. "In these conditions," says the writer, "a collision would result in the flooding of only one compartment, or two at the worst. In any case not a drop of water would penetrate to the interior of the vessei, ..., Ships built in this way would also have the ad-

vantage that they would not roll, as has been shown by actual experiment. . . . Finally, instead of being uncomfortable for passengers and diminishing the capacity of the vessel for freight, this arrangement would make it possible to increase largely the conflor of voyagers by enabling us to raise the cabins without danger. The inventor also claims that it is not impossible to make over our existing vessels so that they will answer these conditions."—Translation made for This LITERARY DIGEST.

The Psychology of the Llon.—An interesting experiment calculated to throw light on the degree of intelligence possessed by wild animals is described in the Annales de la Psychologic Loologique, a publication devoted to facts of experience or observation that bear on the mental faculties of animals rise experiment was tried by M. Hachet-Souplet in the Paris Museum of Natural History on May 19, 1901, and the following abstract of his account is taken from Cormos (December 2):

"The subject of the experiment was the fierce and shaggy king of beasts. The object was to ascertain whether the lion. whose psychology is almost unknown to us because of the difficulty of studying it in the African deserts and because it is probably altered in menageries, has enough ingenuity to open a box in which is placed some attractive morsel. The lion in the experiment, on being thrust into the cage where the box is placed, first showed a feeling of disquietude, which, it seems, could be clearly perceived in his attitude and 'on his face '; then he took courage, and, after some hesitation, he approached the box very gently, smiffed at it, and convinced himself of the nature of its contents, showing a lively desire to get at it. Nevertheless, he did not try to break the boards; he examined the box with close attention, and finally he took the edge of the cover gently in his teeth and raised it without violence. He was at this time in front of the box, on the side opposite the hinges; it was thus necessary that he should thrust his neck forward over the box, stili holding the cover, and that he should not let go of it until he had opened it far enough for it to fall over backward. This had to be done in spite of the temptation offered by the meat, from the moment when his mouth passed over the morsel. Now ail these movements were carried out by the lion, without baste, in comparatively precise fashion and, so to speak, "reasonably. The trial took three minutes. Here we have an exact fact with which we may clotic the framework of the leonine psychologya framework which has been occupied hitherto, Mr. Hachet-Somplet affirms, solely by the very romantic adventure of Androcles. We might add also the story of Daniel; but the lions that spared the prophet's life would doubtless have devoured him if their instinct had not been mastered and modified for the moment by an invisible force."- Translation made for The Lit-ERARY DIGEST.

The After-Dinner Nap,...Those who indulge in a nap after a meal argue "that it is a natural instinct," and point to animals to prove their point. A German physician now calls this belief in question, according to \*Health\* (January), which says:

"Dr. Schule is the daring savant who has hurled this bomb into the camp of the postgrandial sleepers. He does not indulge in unreasoning condemnation of the practise, but as the result of a number of experiments he announces that sleep after metals has the effect of decreasing the mobility of the stomach, and inducing a condition of hyperacidity. On the other hand, he admits that the recumbent position after a meal is favorable rather than otherwise, but the tendency to sleep should be resisted, for that way danger lies. The doctor bases his conclusions upon the analysis of the contents of several normal stomachs a few hours after eating. In some of the cases, the need had been followed blow at the after-dinner map, it need not be accepted as conclusive, as there may have been conditions present in the cases reported of which the analysis was not cognizant."

# THE RELIGIOUS WORLD.

# THE DECLINE OF ATHEISM.

I T is worth noting that the first year of the twentieth century has not produced any "new religion," and this fact leads F. Marion Crawford, the well-known novelsat, to hope that for a time at least "humanity may be willing to believe, without inventing new creeds in which its belief may run riot for a while, degenerate into credulity, and explode in the disaster of disillusionment." Mr. Crawford sees another hopeful sign in what he believes to be the waning unfuence of the school of "Scientific Atheism," which "seemed to threaten the foundations of faith in all men, because it proposed to show suncthing new and demonstrably credible in the place of the belief in a supreme but mivistible and undemonstrable cause of things, on which all the religious of the world originally depend for their existence." He continues (in the New York Jearnat, December 29) as follows:

"There was something very heroic about the men of science of the nuneteenth century. As the Titans fought against Olympus, they arrayed themselves in battle against Jimpus, they arrayed themselves in battle against all religious beiler, armed with such weapons of argument as the human intellect had not seen since Socrates and Plato reasoned on the other side to prove the immortality of the soil. Their aim was high or they sought truth, their scientific conviction was sincere, their warfare against the Great Undenonstrated was open and elsaless. They had much intellectual vanity, and small blame to them, but they were splenduly unselfish inen; they had their limitations, but they admitted these frankly; their very prejudice was imposing by its simplicity and breadth.

"They failed to change, or destroy, the religious of the world, but they accomplished much. They were not mere pioneers and forerunners of discovery, they were discoverers themselves; yet, to the men of science of the opening twentieth century, they were what the medieval alchemists were to Priestly and Lavoisier, what Cornelius Agrippa was to Galvani and Ampere, who in their turn were little more than empiries compared with Helmholtz or Huxley. As Ptolemy the astrologer was to Tycho Brahe, the astrologer on whom truth was dawning, as Brahe was to Galileo the astronomer, as Galileo to Herschel, each depending directly on him who went before him, so our modern seekers after learning are themselves in debt to the 'Scientific Atheists' of the nineteenth century-those patient students who piled facts upon facts with untiring labor, till they boasted that they could prove heaven a fable and make religion bankrupt for all time to come."

"Scientific Atheism," declares the writer, was impotent because its attitude was simply a negative one, denying the old, but establishing nothing new. "It failed to convince us that we should not believe in something altogether beyoud it," he says, "for It did not keep its chief promise, and when it told us all knew, it was still as far as ever from the discovery of a demonstrable prime cause." Mr. Crawford concludes:

"As we grow older, we find out what it means to fight for a principle, without hope of present advantage, and we learn to respect the dead Titans who gave their lives for an impossibility, and whose failures to destroy the indestructible were marked by the steps they add to the Giant's Causeway of learning. For tho they could not tear down what was beyond their reach, they planned and built the broad military roads of modern science, monuments of their patience and skill, along which the mot total down have—the welfare and security of man, have—the welfare and security of man.

"If there is one condition of thought which is characteristic of the new century, and of the last years of the old, it is the truce between religion and science, the mutual understanding that neither will disturb the other.

"Darwin, the greatest thinker, the greatest logician, the greatest discoverer of the last generation, was already beyond the limitations of 'Scientific Atheism' when he wrote his 'Earthworms'

"So was Helmholtz in his later days. A man who is now a leader in scientific discovery, and who was once his assistant,

told me many years ago of something he said that showed the bent of his thoughts.

"He was much given to explaining a vast number of phenomena by the theory of the 'vortex."

"But,' the assistant asked one day, 'what made the vortex?'
"The man of genius looked at his young companion for a mo-

ent.
"'God made the vortex.' he answered gravely."

# CAN A MAN BE A CHRISTIAN ON FIVE

T III's question has been asked of J. Keir Hardie, editor of The Labeur Leader (Glasgow) and a member of the Brit-lab Parliament, and he answers it in a recent issue of his paper. He confesses at the outset that he finds himself in something of a quandary in uttempting to reply to the query, on account of the varying definitions of "Christiantiy." If a Christian is one "who takes no thought for the morrow, and who does not lay up for himself treasure upon earth," then it is very obvious that "not only can a man be a Christian on five dollars a week, but he could not possibly be anything else." "He might not be much of a theologian," adds Mr. Hardie, "and could not well be a churchgoer, but a Christian he must be." The writer continues:

"In the early days of Christianity, asceticism was held to be a logical outcome of Christian belief. Dives was sent to Hades for apparently no other reason than that he was rich. Lazarus went straight to Abraham's bosom because of his earthly poverty. James, the Epistolean, called upon the rich to 'weep and howl' for the miseries ahead of them. Christ sent out his disciples with empty purses, and himself had not where to lay his head. The Sermon on the Mount is a consistent and powerful argument against property in every form. The Great Teacher understood clearly the difference between life and a mere struggle for existence. If men desired life they might have it in abundance, but only on condition that they abandoned the worship of Mammon. God, the Father, had so ordained that in response to labor the earth would yield enough and to spare for the supply of every human need, and if men were only to follow the example of the owners of the field and the birds of the air and hold all nature's gifts in common, drawing from the great storehouse only what each required for the needs of the day, then life would become free, joyous, and beautiful.

"It wall be seen, therefore, that the man who is most simple in his tastes, whose life is lived in closest communion with nature, and is farthest removed from the pomps and vanities of worltly display, approximates most nearly to the Christian ideal. Not for him the glare and glitter of the saloon or the hausts of vice, not for him the expensive adornment of gay appared. His leauty must be that beauty of holiness which comes from closely following the laws which govern life..., The acquisition of property he will regard as an impediment to the development of the soul, which is alone immortal and worth caring for. With the soul, which there was no wealth save life, and materiat things were of life.

The fatal flaw in this argument as applied to the subject under consideration, says Mr. Hardie, is simply this: that we do not worship Christ at all, but Mammon. In chard life, in literature, in politics, Mammon sits euthroned. The original question resolves itself, therefore, not into a problem of whether a man can be a Christian on five dollars a week, that is, live a life in accordance with the will of God under Christian surroundings, but whether be can do so under present conditions, which, in the opinion of the writer, are the reverse of Christian. To the query in this amended form Mr. Hardie does not hesitate to reply with an emphatic negative. He says.

"The neighborhood in which the man will be compelled to live, whether in London or in some other big industrial center, will be one in which a healthy life is impossible. He will see his children and his wife suffer from sickness due in part to a lack of decent food and in part to unsanitary surroundings. However meek and mild he may be, the human spirit within him will be forever in revolt against such conditions, and this of itself is fatal to the Christian life. He will see his wife and children poorly ciad, insufficiently fed; his employment nine times out of ten will be precarious and intermittent, and each day's ioss of work will be so much necessary food kept from his loved ones. At his work he will be treated with less consideration by those in authority than the machinery, which it may be he tends. There will be no human relationship between him and his employer; a man with \$5 a week is simply a hireling of no account, of whom there are thousands willing to take his place, should be show the slightest sign of revolt. Not for him the fellowship of the Christian church. That sacred place is reserved for people who can wear good clothes, pay seat rents, and subscribe to the minister's salary. There are mission-halls for \$5-a-week people, where soup, blankets, and coal are to be had in winter on condition that a man foregoes his manhood. For the funds wherewith to build the hall, and provide the soup and blankets and coal, will be largely subscribed by the employer and landlord who grow rich out of his misery.

'Under such circumstances it is not difficult to forecast the end. The man feels himself enveloped in the meshes of a net from which there is no escape. A sense of injustice never leaves him. The present has no joy, the future no hope. And so, bit by bit, his self-respect departs, the careworn face of his wife and the poor clothing of his children irritate him; he loses heart, loses faith in man, faith in God. With growing years he finds it ever more difficult to get work. By and by some period of unemployment more prolonged than those through which he has gone overtakes him, and he ceases to struggle, and becomes, in the language of the fashionable slummer, a lapsed man or a lost

soul \*

## DR. DIXON'S INDICTMENT OF CHRISTIAN SCIENCE.

N the columns of The Seminary Magazine, the organ of the students and alumni of the Southern Baptist Theological Seminary-which contains "nothing known to be contrary to the wishes of the faculty "-has appeared an interesting discussion of Christian Science. In the issue for November the subject was opened by Rev. J. R. Moseley, Ph.D., who presented an article upon the "Fundamental Ideas of Christian Science." In the December number he followed with "The Relation of Christian Science to Orthodox Christianity." Dr. Moseley's views are characterized by Dr. T. T. Eaton in The Western Recorder (Louisville) as being "far more favorable to that fad than the facts warrant." In the same issue with the second of Dr. Moseley's essays appears a severe arraignment of the teachings of Christian Science from the pen of Rev. A. C. Dixon, D.D., of

Dr. Dixon begins by declaring that Christian Science, while professing reverence for the Bible, is "a system of infidelity which contradicts the Scriptures, or wrests their meaning to suit its purpose," Secondly, he maintains that it "comes dangerously near the sin against the Holy Ghost, which is never forgiven, when it claims itself to be the Holy Ghost; because that makes the Holy Spirit responsible for all the follies and sins which are cloaked under the plea that there is no such thing as error, sin, or guilt." He says further:

"Christian Science is well adapted to the making of hypocrites. Hypocrisy is simply acting a part, and no man or woman can write with a material pen, 'There is no such thing as matter'; or can, while pain racks the body, assert, ' There is no such thing as pain'; or, while a corpse lies before him, declare, 'There is no such thing as death,' without acting a part. On p. 296 [of Mrs. Eddy's 'Science and Health '] we read: 'If delusion says, "I have lost my memory," you must contradict it. No faculty is lost, Here are directions for denying what you know to be the fact. 'If a child says, "I am hurt," tho the bleeding gash may be there,

the mother must reply, "Oh, nonsense! you are not hurt: you only think you are" (p. 336). 'Sight, hearing, and all the senses of man are eternal, they can not be lost ' (p. 418), which means that a blind man must declare that he is not blind, a deaf man must assert that he is not deaf.

"'Man can not depart from holiness' (p. 541), and when he sins he must assert that there is no such thing as sin,' Now I submit that there never was made a better formula for manufacturing hypocrites. Let one continue to declare what he knows to be false, and act his part accordingly for a few years, and be will have formed a habit of hypocrisy which has become a second nature "

Dr. Dixon asserts that marriage is not now encouraged in the "inner circle " of Christian Scientists; that Mrs. Eddy has taught that women to-day can bear children of the Holy Spirit as the Virgin Mary did; and that "there are women in Massachusetts who have declared that they have borne such children,"

Christian Science would have us return to the medieval conception that "dirt and devotion" go together, continues the writer, since Mrs. Eddy has decreed that "bathing and rubbing to alter the secretions or remove unhealthy exhalations from the cuticle" are unnecessary, and that "the daily ablutions of the infant are no more natural or necessary than it would be to take a fish out of water once a day and cover it with dirt." In the light of these and similar teachings, Dr. Dixon indicts Christian Science as the "champion humbing of the age," and proceeds to make the following specifications under this indictment.

- (1) It ciains to be Christian, while in fact it is pagan. He quotes Pundita Ramabai as saying that she recognized it at once as the same philosophy that has been taught among her people of India for four thousand years.
- (2) It claims to be the religion of Jesus Christ, while asserting that it was discovered and revealed for the first time by a woman about thirty-five years ago.
- (3) It claims to be scientific, while it denies the first principles of science.
- (4) It claims to be progressive, while it sets a premium upon ignorance, "Science and Health" asserts that "anatomy, physiology, treatises on health, sustained by what is termed material law, are the husbandmen of sickness and disease.
- (5) It professes superior wisdom while it makes assertions bordering on insanity.
- (6) It professes to heal the body by asserting that all diseases are illusions of mortal mind, while it really heals by simple and well-known mental processes,
- (7) It professes to relieve the suffering of lumanity, while adherence to its vagaries would increase that suffering a hundredfold
- Dr. Dixon declares that there is but one grain of truth in Christian Science, namely, that "people may be healed of some diseases by mental processes," and that this grain of truth is "counterfeited in a hundred ways by passing it off for more than it is worth "
- Is Bible-Translating Becoming a Fad?-In some quarters the multiplication of new translations of the Bible has been regarded as a gratifying sign of renewed interest in Biblical study. The Northwestern Christian Advocate (Chicago, Methodist), however, thinks that the production of new versions has already gone too far and is tending to destroy the reverence in which the Bible is held. It says:

"There are already at least half a dozen of these so-called modern English Bibles, written in what the authors or editorsclaim to be the language of the people, each of which in many vital respects differs from the others, and none of which equals in sublimity and power the language of the old version which has been the channel through which God has spoken to the hearts of men for centuries, and which has been simple enough to enable all to grasp its meaning.

"These so-called modern Bibles are helpful as commentaries to the average reader, but as substitutes for the version which the people are wont to accept as the holy Scriptures, no one of them has yet justified such a place. It is almost inconceivable that men should expect some of these to be considered seriously as the Bible. If such renderings are continued to be presented to the Bible-reading and Bible-loving world, every man who has ability to write and may be unsatisfied with the Bible or with the versions which have already appeared may produce a Bible in his own language and present as good claim for its acceptance as those which preceded it.

"The Bible is not a book to be put in the language of the coumon people and to be so presented as the word of God. It is a unique book in origin, purpose, and spirit, and should be as unique in diction. It should be interpreted into the language of the people so that they may understand it; but if it is to be rewritten to conform to the ever-changing language of the people, for many it must needs be filled with slang, which is more nearly than any other the language of vast unnibers.

"To impress the world as a divine book, the dignity of the language of the Bible must be maintained, and, in this respect. no improvement can be made upon that of the King James version, which has been practically the making of the English language, except in the substitution of words which may be understood in the language of to-day for obsolete words, and the correction of such renderings as the revisions of the original texts may show to have been erroneously translated."

# THE CHRISTIAN AWAKENING OF JAPAN.

THE Christian revival planned and carried through during the past year in Japan seems to have marked an epoch in the religious history of that country, if one can judge from the enthusiastic accounts sent by mission workers in that field to the American religious press. Miss Jessie Ackerman, writing to Zion's Herald from Osaka, declares that Japan is experience ing "the greatest religious awakening that has ever come to the country since the Roman Catholics had their 'Day of Pentecost' nearly three hundred years ago"; and the Rev. James H. Pettee, of Okayama, says that "whatever may be said of Japan's attitude toward things religious during the last century, she swung into line with her sisters of the West most promptly on the morning of January 1, 1901, and gave a Christian salute to the twentieth century." From an article by Mr. Pettee in The Congregationalist and Christian World, we condense the following account of re-

cent Christian activity in Japan :

The new hopes and determinations of Christians with reference to a forward movement as soon as the twentieth century should open found their first public expression at the annual meeting of the Evangelical Alliance held in Osaka in April, 1900. From that Japanese meeting the matter was brought before the foreign missionary conference during its session at Tokyo in October of the same vear. Japan has never be-

fore seen such a systematic use on a large scale of the well-approved methods and machinery of evangel-

(The originals six times this size and printed in colors.) Coursesy of The Congregationalist and Christ: an World.

5 th 55

JAPANESE REVIVAL POSTERS.

istic campaigns. Beginning with the first series of meetings last April in Kyobashi district, Tokyo, the twentieth-century movement has spread all over the capital and thence to leading cities and towns throughout the land. Among the scores and hundreds who have been converted are many "hard cases," drunkards, gamblers, and society outcasts. Accurate statistics are not

yet available, but certainly five hundred persons have received baptism since May, and thousands more are in process of training for church-membership.

Interdenogunational and international have been written all over this forward movement. Christian Endeavor and similar organizations are much in evidence. Even the Russo-Greek Church, of which that remarkable missionary, Father Nicolai, one of the great religious heroes of the age, is the head and sole foreign clerical worker in this land, and the Roman Catholic as well, feel the thrill of the new Christian life that is surging through Japan. Foreigners vie with Japanese in sustaining and extending the movement. It is a unique opportunity for the wise use of larger means and more workers.

During the latter part of September, Mr. John R. Mott, secretary of the World's Christian Student Federation, acting in response to repeated invitations, visited Japan and made a fourweeks' tour of the country. The first city he visited was Sendoi, and the government college there, which never before had opened its halls for religious addresses, allowed him to speak

within its walls. A thousand students board his address on "The Influence of Christianity among the Students of the West," and one huudred and forty gave in their names as desiring to become Christians. In Tokvo. Mr. Mott was assisted by pastors and educators, by Christian teachers in government colleges, and by the Hon. K. Kataska, president of the House of Representatives in the Japanese Diet. For the first time the Imperial University opened its hall to a distinctively Christian address. and about four hun-

dred students gave in their names. In Kvoto, Okavama, Osaka, Kumamoto, and Nagasaki almost as encouraging results were achieved. "Mr. Mott has done more than merely to call attention to the Christian religion," remarks The Outlook: "he has created not a little confidence in Christianity among the educated classes in Japan."

The Japanese press manifests much interest in the evangelistic movement. One newspaper went so far as to insert short sermons as samples of the teaching given. The Buddhist papers urge the Buddhist priests to be similarly earnest. A Japanese Christian daily newspaper is already thought to be within the range of probabilities, and the Rev. Unkichi Kawai, of Tokyo, is now in this country in the interests of this project.

The subject of religion seems to be engressing the attention of the Japanese reviews, and from their comments it appears

Secretary of the World's Christian view, Japan is heartily congratu-Student Pederation.

petitions of the Mormons and refused to grant them the freedom of the city in the land of the Mikado. In the aversion manifested by the enlightened classes and by the Government and press of Japan for polygamy, the author sees proof of the great moral progress realized by modern Japan.

lated upon having resisted the

Taiyo is most pessimistic with regard to the result of the Christian congress, held at Tokyo in May and June, 1901. The glory of Christ was much preached and sung, it reasons, but the songs were old and well worn. What have they accomplished? Nothing. Was there at least any effort made to explain to intelligent Japanese the work of Christianism in its modern application? The work of the congress was confined to making a few hundred converts, a deceptive and meaningless figure, for those who are sincere will return to their former belief after having lost their illusions, and as for the others, they are of no account. The writer says: "A house has been built on the moving sand, It will fall in ruins and nothing will remain of it." As for our Japanese brother, its readers are assured, the Christian movement will end by a fiasco analogous to that of the Buddhist movement, inaugurated by Toa Bukkyokai. Elsewhere, the same review accuses Roman Catholicism of being the great instigator of the imperialistic ambitions which tend to fetter the American soul

An interesting study by Dr. Inoue Tetsujiro appears in the same review. As a philosopher and moralist, he tries to reconcile the principal religious doctrines, Buddhism, Christianism, and Confucianism, and he expounds with much profoundness the identity of their moral precepts. The author even goes to the length of telling us that the conception of the divinity, as conecived by Christians and accepted by Chinese-the Jotei, Tensei ei Ten-correspond to the Christian Trinity. Therefore why sow discord among men? Is it not well known that religious divergences are worse than the antagonisms of races? "The different religions," exclaims Inoue, "are erumbling and falling to

the ground, and one must build upon their ruins a religion than shall be both sublime and characterized by principles of humanity and love." Later, alluding to the famous speech of Emperor. William, recommending "that no quarter be given to the Chinese," and that his fellow beings be exterminated like so many wild beasts, the philosopher Inoue deplores the barbarity and bigotry so widespread in Europe .- Translations made for Tug LITERARY DIGEST

# A PROPOSAL TO CANONIZE JOHN HUSS.

THE petition addressed to the Holy Synod of the Greek Catholic Church by Czechs living in Russia, asking for the canonization of John Huss, is warmly seconded by the Narodni Listy (Prague), "Should the prayer be granted," says this petition, "it would mark the accomplishment of a wish long dear to the Czech people. John Huss, the Czech reformer, is called a saint in all our ancient national hymns." The matter has received serious consideration in the columns of the Navare Vrempa (St. Petersburg), which says, however, that "investigation into Huss's record " must be made by the Greek Orthodox Church before it can canonize him:

"But the matter is one to be considered from something besides a dogmatic and moral point of view. There are political results involved. Pan-Slavism and its propaganda will be affeeted. Huss, a man of candor and courage, could not perhaps have united himself with the Greek Orthodox Church, because he did not understand her well enough."

The Greek Church may make Huss a saint, says the Vossische Zeitung (Berlin), because Russia wants to bring all Slavs over to herself. This idea is more succinctly put by The Standard (London)

"Tho it would be strange to see the Orthodox Church canonizing a man whom the Roman Catholic Church first excommunicated and then burnt at the stake, such a step would be quite in consonance with the Orthodox propaganda amongst the Czechs, as well as with Russia's political design of making herself the central protector of all Slavs, including those still under the rule of other countries. Russia finds it easy to extend her sway over the Slavs who adopted the Orthodox faith; the Orthodoxy, in itself-as shown by the case of Rumanians and Greeks-does not suffice to secure submission to Russian influencc."

It is in the last degree improbable that the canonization of Huss by the Greek Catholic Church will ever take place, according to that well-informed Roman Catholic paper, The Weekly Register (London), which observes:

"In England, after the fires of Smithfield and the horrors of the Inquisition, there is no more vehement charge against the church than its burning of John Huss in 1415. It is a humorous circumstance for the historian and for the philosopher that Huss was condemned and burnt by the identical Council of Constance that would have reduced the Pope to a cipher."

# RELIGIOUS NOTES.

THE new constitution of the Methodist Episcopal Church, which was adopted at the last general conference, held in May, 1900, and was referred to the various conferences throughout the country, has finally been approved by the three-quarters vote required. Its most striking provision is that which gives women the right to sit as delegates in the general conference. This innovation comes as the result of a contest that began about thirteen years ago.

THE coming of Dr. S. Shechter to New York as the president of the reorganized Jewish Theological Seminary is quite a notable event in the Jewish world Dr. Shechler is reader in rabbinics in the University of Cambridge, and professor in the University of London. He is famed for discoveries in Hebrew literature, and the Jewish papers express the belief that his coming will infuse new life into Jewish scholarship in this country. A liberal endowment (and has lately been provided for the Jewish Seminary by the generosity of Messrs. J. H. Schiff, Leonard Lewisohn, and Daniel Guggenheim.

# FOREIGN TOPICS.

## HOW MUCH IS THE KING OF ENGLAND WORTH?

DURING his life as Prince of Wales, it was popularly supposed that the present monarch of England, whose coming coronation is exciting widespread interest, "had enough to do to make both ends meet." Mr. Arthur Mee, in a "life-history" of Edward VII., which has recently been published in London with the title of "King and Emperor," combats this general opinion. He says:

"It is not difficult to understand how the rumors of his poverty were set abroad. The special grant of £36,000 a year in 1889 had probably something to do with it, but we owe it chiefly, no doubt, to the Prince's well-known sympathy with the race of Israel. The King has always been on excellent terms with the lews, and it is an open truth that his sympathy has been misinterpreted. When he attended a Rothschild wedding in 1881, there were not wanting those who deliberately misunderstood his presence in the synagog, where no other prince had ever been since the first decade of the century. It was maliciously imagined, and openly suggested, that the Prince had particular reasons for being friendly with the race of moneylenders, and the talk of his being greatly in debt became so general that the Prince thought it worth while to contradict it. Sir Francis Knollys, the King's private secretary, declared that his master had no debts worth speaking of; that he could pay every farthing that he owed at any moment; that there was not a word of truth in the tales of a mortgage on Sandringham; and that the whole thing was a fabrication, on a par with similar tales representing the Prince as being assisted by financiers of more or less doubtful honesty.

"The truth is, that from the moment of his birth King Edward has been splendidly rich. He was born, as the Irishman would say, with £60,000 a year in his pocket, and from that day till he eeased to be Prince of Wales, the Duchy of Cornwall yielded him that magnificent revenue. The King married at twenty-two, and Parliament gave him Marlborough House and a weddingpresent of £40,000 a year. That, too, has come to him regularly since 1863. In 1889, when the Prince's family ran away with his money, Parliament once more came to his aid, and nearly doubled the grant he had received since 1863. For eleven years the King has been relieved of the anxieties of a father for the financial welfare of his children by a special grant of £36,000 a year, bringing his annual public income to £136,000 [\$680,000]. is what it is worth to be Prince of Wales. But even that huge sum is much within the mark of the real income of King Edward before he came to the throne. It has been stated that the King has a private estate of £100,000 a year, which would have made his annual income before his accession something like a quarter of a million; but not having anthority for that statement, we may leave it out of our reckoning. Ail the world knows, however, that the King has at least two private sources of incomehis estates and the turf. As Prince of Wales he won £120 a week on the race-course. Six thousand pounds a year represents the winning of his horses during the last ten years. And Sandringham, which was purchased out of his early savings, has a rental of £7,000 a year, bringing his income as we know it to within £1,000 of £150,000 a year.

"That is the minimum, whatever may be the maximum, of the revenue King Edward enjoyed as heir to the throne. The man who would be poor on £150,000 a year would be poor on a million. The House of Commons, when the Prince was receiving £100,000 a year, increased his allowance by £15,000, but the grant was by no means nanaimous, a fact which shows that a considerable section in Parliament regarded the Prince as rich enough."

Mr. Mee also recounts the grants to the Prince of Wales for his Indian trip.

"The Prince was seventeen weeks in India, and the hill came to over \( \frac{1}{1},000 \) a day. The Admiralty spent \( \frac{1}{2} \) s.000 in taking him out and bringing him home. The Indian Government devoted \( \frac{1}{2} \) s,000 to his reception, and the House of Commons gave the Prince \( \frac{1}{2} \) o(0,000 as pocket-money. A few years before, the

Prince's visit to Caunda had cost nearly  $\angle p_0.000$ ,  $- \angle p_0.000$  of which had been granted by Parliament, and  $\angle p_0.000$  from the Canadian Treasury; but as there was nothing in this grant of a pirely personal nature, and as the greater part of it was made by Canada itself, we may dismiss it from our reckonling.

"We are now able to form some idea of the amount of money the Prince of Wales has had at his disposal during his lifetime. He was born with £60,000 a year, set up housekeeping with £10,000 a year, and from 1850 to 1901 had £19,0000 a year. Parliament gave the Princess of Wales £10,000 a year on her marriage in 1860, which totals up for the thirty-seven years to £10,000. So that we can now ask, and say with some approach to accuracy, how much money the Prince of Wales has had at his disposal. Totaling up all his Parliamentary grants, his revenues from the Duchy of Cornwall, his rental from Sandring-ham, and incomes from other sources, we find that he has had enough to make him a millionaire many times over if money, being round, had not a habit of running away. The account stands, in rough figures, something like this:

From the Ducky of Cornwall
Prom Parliament 1,926,000
From Sandringham Estate pho.onc
Ten years' winnings on the turi 60,000
Total
Payments to Princess of Wales
Grand total (6.506,000

"Six millions of money! Roughly, it is an income of f.00,000 a pear through the whole of his life. Every day the King before his accession had an income of £724 ss; every hour £11 8s. 3d.; every minute, a, 9d.6. Every time the clock has ticked since the light of Albert Edward dawned on the world, his wealth has gone by three forms and the state of the state gold, more than the minut makes in a year—is an income not to be despised, even in these money-devolsping day.

Since his accession to the throne, even these princely wages have been raised. As Edward VII, he receives £385,000 [\$1,925,000] a year, or a trifle more than £1,000 a day.

# GERMANY, THE BRITISH EMPIRE, AND THE UNITED STATES.

THE Germans want the place in the sun which we possess, to the Grant any rate a very large share of it. It is no discredit to the Grant any rate a very large share of it. It is no discredit to the following the place of the state of the st

The paragraph above is from a recent editorial in the London Spectator, and seems fairly to reflect British opinion, notwithstanding the strong dissent of The Saturday Review (London). Germany's plan for the destruction of the British empire is thus hinted at by "Calchas" in The Fertingth Review (London).

"She is bound to aim at the victory in trade; she can not be content that her fleet should remain second, and will not easily abandon the dream that it may one day be first. The Germans, in short, are the one people who have an overwhelming interest in breaking down our sea-power. If that is ever done, it will be done by their saststance and could not be done without it. That is the essence of the question... The limitation of military budgets might be effected by arrangement, and the European content of the property of the property of the property of the view almost hopeless problem of the successful development of their fleets against the Anglo-Saxon. Now, if there he are attimate purpose behind that activity of Germany at all points of the compass which suggests simultaneous designat upon Christop of the compass which suggests simultaneous designate upon Christop and Asia Minor, South America, and upon sea-power generally, and as see well calculated to confines the judgment of other countries that master aim will not be disclosed until the work of creating the fleet is complete. It will be the second or third navy in the world. And if we are not insured by that time against possible dancer from Germany, it may be too late."

"The only hope that can be entertained of breaking down British sea-power," proceeds this authority, "lies in the possibility of a continental combination under Tentonic leadership." As for a food supply during her struggle with Great Britain, Germany will draw upon the grain-fields of Russia. All of which inspires the German press to declare that England is maintaining a literary bureau with the object of alarming the United States into an alliance with herself. On the subject of what it terms German "phobia" the Krenz-Zeitung (Berlin) said recently:

"It is well that the favorite occupation of the English press is at last being estimated in the United States at its true value. At the same time it must be pointed out that in this kind of goading there must always be two parties—the one who goads and the one who is goaded. And the Americans are not children to be caught with hoaxes. . . The coarse of the English press in sowing such dissension is positively Mephistophiclam."

An interesting account of a conversation with Emperor William in reference to the United States and the possible attitude which Germany may be forced to take toward this country, comes from the Revne de Paris (November). It appears that the writer, M. Gaston de Ségur, was traveling last July in Norway and in the little fjord at Odda he found the imperial yacht Inhonzoldern. He received an invitation from the Emperor to drue on board, and the article in the Revne is a narrative of this visit. "He talked with us." says M. de Ségur, "chiefly about America, for which he professed only moderate sympathy." The account proceeds as follows:

"He sees a future menace in these colossal trusts, so dear to the Yankee millionaire, which tends to place an industry or an international exchange in the hands of a single individual or a group of individuals. Suppose, said he, in substance, that a Morgan succeeds in combining under his flag several ocean lines. He occupies no official position in his country, outside of the influence derived from his wealth. It would therefore be impossible to treat with him if an international incident or a foreign Power were involved in the enterprise. It would likewise be impossible to obtain redress from the state, which, having nothing to do with the matter, would decline all responsibility. Then to whom could one have recourse? To guard against this danger, the Kaiser foresees the necessity of forming in the future a European 'Zollverein,' a 'customs leagne,' against the United States, similar to the blockade devised by Napoleon against England, for the purpose of safeguarding the interests and assnring the liberty of continental commerce at the expense of the development of America. And he declared to us, plainly, that in such an event. England would be called upon to choose between two diametrically opposite policies: either to give her adherence to the blockade and array herself on the side of Europe against the United States, or unite with the last named against the continental Powers."

Commenting on the German Emperor's views of the United States, The Saturday Review (London) remarks:

"Some months ago we indicated the very remarkable forecast he presented to the attention of our statesmen and soldiers when he was in England at the time of Queen Victoria's funeral. He then insisted on the necessity which lay upon Germany to construct a great fleet, not with a view to contesting the supremacy of England on the seas, but to meet the menace which the overweening ambition of the United States would some day offer to the development of Europan policy in South America. A most remarkable confirmation of the statement is to be found in the Kerune de Paris for November 1... In the light of these dis-

closures the recent assurance of the German ambassador at Washington that the pursuit of coaling-stations on the South American continent by Germany is a figment of the imagination may be received with respectful astonishment or admiration of such consummate diplomacy."—Translations made for The LITERAN Diego.

# TRUSTS AND THE RUSSIAN GOVERNMENT.

B'ACKWARD as Russia is industrially and commercially, the trust question has not only reached her but has assumed an enter phase. It presents itself, however, in a very different form from any known in the United States or in Western Burope. Russia has endeavored to build up manufacturing industries at the expense of ugriculture, and her present "crisis" (manifestgle in failures, falling values, the collapse of corporations and of banks, etc.) is attributed by the Liberal press to the artificial and excessive stimulation of certain industries. The organizers of syndiciates and trusts claim that the remedy is in consolidation, and they ask more than toleration and non-interference from the Government. They demand active assistance and support for the combinations, and assert that it is the duty of the Government to promote the formation of trust.

So general was the discussion of this remarkable attitude that the official organ of the ministry of finance, The Messenger of Finance and Industry, felt itself called upon to define the Goverapient's position on the subject of trust formation in Russia. The statement is long and elaborate. It begins with a defense of the protective system adopted by Russia, and points to the rapid growth of manufacturing industries. The present crisis is attributed to the fact that the reduced prices of commodities make it difficult for overcapitalized companies, or for companies which borrowed money improvidently, at high rates of interest, to meet their obligations. The Government can not regard low prices as au evil, continues the statement, and can do nothing to enable the manufacturers to reap higher profits. Economy, energy, cultivation, or new markets and efficiency are declared to be the only practical and permanent remedies for the present disorder. Finally, coming to the question of combination, the statement says:

"Our indestry has before it a gradual and independent adapnation to a more normal order of things. If our men of affairs, realizing the lack of such complete adaptation and the impericecharacter of their present organization, shall see fit to seek a way out of their difficulties by means of cooperative and combined effort, the ministry of finance will place no obstacles in that path. But this attitude of the ministry toward industrial combination can be counted on only in case combination in research to which either an avowed or secret intention to raise prices artificially. In any event, such industrial consolidation must be the business of the manufacturers themselves, and must not depend on the encouragement or the participation of the Government."

Commenting on this, Nevesti, an opponent of trusts, says that the Government means by industrial cooperation such legitimus methods as conferences, common efforts to cultivate new nunkets, the establishment of Russian agencies abroad, etc., but that the formation of syndicates for the suppression of compettion and the absorption of undependent factories is distinctly disapproved as contrary to the interests of Russian

Prince Mestcherasey, in his Grajdatini (Citizen), says that the ministry of finance should long ago have warned the traders and manufacturers that "the Government is not the guardian of our mills and banks and corporate enterprises, but first of all the master and the trustee of the national interest, bound to promote private industry only in so far as it may be necessary to the economic welfare of the whole."

The Moscow Rosskya Viedomosti, an advanced Liberal organ, edited by professors of the Moscow University, attacks the whole policy of artificial stimulation of maunfactures and insists on the necessity of fostering agriculture. It says

"Russia is in a position very different from that of Germany or France. She is not a creditor, but a debtor, of other countries, and she must try to secure a more favorable balance of trade. Our export trade is wholly agricultural, and to the increase of such exports our attention must be directed, rather than to feverish, premature transplantation of imbastries, with the aid of foreign capital, which have no foundation in our natural, social economic conditions."- Translation made for The LITERARY Dicker

## WHAT REDMOND'S TOUR DID FOR IRELAND.

OW that John Redmond has been welcomed back to Ireland in a most enthusiastic manner, the press of the United Kingdom is involved in dispute regarding the results of his tour. It affords the London Times satisfaction to allude to an editorial utterance of the New York Times in this fashion

Regarding the Clan-na-gael meeting, The Times says that the palmy days of the Irish agitators are long past. Irish servant-girls have other use for their wages than to give them to men who falsely pretend to buy dynamite with them. The business is as dead as travel by stage-coach, and naturally the bosoms of the agitators are filled with despair for the future of their beloved country.

The point regarding Mr. Redmond's your is whether, as The Daily Netes (London) puts it, he has "the Irish in America behind him." At any rate, according to the same authority, "he certainly has the Irish at home," It is not, however, "because they love Mr. Redmond that they have made him their parliamentary leader, but because they perceive that he knows how to play the parliamentary game," Moreover:

"Mr. Redmond is a sort of half-way house between Parnell and O'Connell. Like O'Connell and unlike Parnell, he is a Catholic and a Celt. Like Parnell and unlike O'Connell, he is essentially a Parliament man. O'Connell was at his best on the Hill of Tara. Powerful as he was in the House of Commons, and indeed everywhere, being a man of exuberant ability and real genius, he required his native air for the display of his highest faculties and gifts. There is no better speaker in the House of Commons at this moment than Mr. Redmond. Quiet and reserved in manner, studiously correct in conduct, he has besides natural eloquence the instinct for debate which Macaulay attributed to Mr. Stanley, afterward Lord Derby and Prime Minister

The Irish home-rule papers are of opinion that Mr. Redmond's tour belied Ireland by insuring American support. "A marvetous success," The Evening Herald styles the tour, and equally enthusiastic are The Freeman's fournal and The Independent. But The United Irishman, a Dublin weekly printed partly in the Irish language, says:

"The mission has been a ghastly failure. We make here two simple assertions, and let The Freeman's Journal and The Independent contradict them if they can: Firstly, that the three Irish organizations in America, the Clan-na-Gael, the Ancient Order of Hibernians, and the Gaelic League all declined to recoguize Mr. Redmond and his colleagues as envoys from Ireland; and secondly, that every meeting held by these gentlemen, with the doubtful exception of the meeting at Chicago, was a financial failure. Misrepresentation of the grossest description was resorted to by the parliamentarian press in order to hoodwink the people at home, but even the simplest noticed that, while long cablegrams describing 'enthusiastic meetings' were published in those papers, none of them attempted to reproduce the actual accounts of the meetings appearing in the American press, We told Mr. Redmoud before he went he would fail. . . . As a last resort Mr. Redmoud appealed to a number of Irish-American millionaires who have not hitherto interested themselves about Ireland, and it is stated that he has been guaranteed a certain sum of money by these geutlemen on condition of their being allowed to nominate or control a section of the Irish members of Parliament. This is the maked truth about the American mission and its result."

The tour led to encouragement, according to Mr. Arthur Lynch, the "Boer colonel" member of Parliament. This gentleman has an elaborate article on "How I Was Elected" in the Revue Blene (Paris), in which he pays Mr. John Redmond a handsome compliment, and in which he explains to French readers as many of the anomalies of his position as the space of two pages will permit.

THE LAND OF UTOPIA.-A STUDY OF THE CONDITION OF FRANCE. -From Mustration (Paris). was not greater, it says, is due not to any diminution in Spanish love for the sport, but to the fact that it is an expensive amusement:

"Some 3,000 bulls and more than 5,000 horses were killed in the ring tills year. The value of these animals (chiefly the bulls, for the horses were old nags) exceeded \$150,000. The Duke of Veragua, the only living descendant of Columbus, is the largest breeder of bulls for the ring. The chief bull-fighter, the espada or matador, receives about \$200 for each tourney or corrida. When the pay of the assistants and other expenses are added, when the pay of the assistants and other expenses are added, with the cost of the national amisement is seen to amount to twen million psectas, or nearly \$2,000,000, which just equals the total standards of the Spanish school-teachers! The star matador, also not not the spanish school-teachers! The star matador, \$40,000 annually—five times as much as a Cabinet minister."— Translation and for Tills Litzman Dieses?

# THE DELAY OVER THE DANISH WEST

"S of many false reports have been sent here from Copenhagen since the negotiations for the sale of the Danish West Indies began that the newspapers now refuse to credit statements emanating from the Danish capital, however explicit they may be." Thus the London Times correspondent in New York; yet exactly two weeks later the Copenhagen correspondent of the same newspaper sent it the following:

"Telegrams received here to day from New York state that the negotiations with reference to the sale of the Danish West Indies to the United States have reached a point which makes it almost certain that the sale of the islands is imminent."

Sheltered behind these contradictions and delays, in the opinion of the Hamburger Nachricken, is a clique of private interests, a fact which was evident under a previous Danish ministry. The negotiations for the sale of the islands have evolved into a sort of "political sea-serpent," thinks the Vossische Zeitung (Berlin), which thus comments:

"The matter has gone so far, at any rate, that a member of the House of Representatives, Mr. Gardner, of New Jersey, has introduced a bill authorizing the Administration to make the purchase for a sum not exceeding \$4,000,000. It is fair to infer that Mr. Gardner would not have brought in such a measure unless he knew that the two governments had arrived at an understanding.

The Danish newspapers have begun to oppose the sale, and most of them bave resurrected a proclamation dating back to 1867, in which it is provided that the islands shall not be ceded without a vote of their inhabitants. Various Danish journals say that a referendum would prove unfavorable to the sale. Yet the Indtpendance Delge (Brussels) actually announces that "an American delegate has arrived in Copenhagen to make formal propositions." Who he is and whence his authority comes does not appear, but this well-informed sheet remarks:

"The little Danish nation, formerly master of three northern kingdoms, sees the last shreds of its empire vanish, and feels a natural sadness. This sentiment is particularly poignant in that part of Schleswig which has been incorporated with Prussia, There all Danes by birth and instinct have cherished a hope for the peaceful revision of the treaty of Prague, They dreamed of a return of Schleswig (Holstein remaining German) to Jutland, in consideration of a cession of the Antilles to Germany, which greatly needs colonies. If it appears that the United States are disposed to take by force what they offer to purchase, that they are absolutely bent upon having the port of St. Croix, the best in that Antillean sea, that they oppose the Monroe Doctrine to the possible installation of the Germans in those regions; and if, on the other hand. Denmark can not afford the expense of nnproductive or ill-governed colonies, then there is nothing for it but to learn the bitter lesson and yield to necessity."

In the islands themselves a protest against a sale has been

made by the Don, a club in St. Thomas. The protest has gone to the King and to the Rigidag. It says Germany is the commercial mainstay of the islands, and expresses the hope that that country "will, at the last moment, prevent the transaction," but fears otherwise "because the moment Denmark sells the islands against the wishes of the population, that moment will it recognize Germany's right to retain Schleswig."—Translations made for The Literash Duest.

Emancipation of Turkish Women.—The gradual emancipation of the Oriental woman, when they come into closer and constant contact with Western civilization, is gradually freeing them from the traditional limitations which have been their lot for area, according to the Montal Carlon, which proceeds.

"Whether this emancipation will result in permanent good is more than doubtful. It is easily possible that, if once her limitations have been removed, the Turkish woman will eventually on willing to associate only with the European. It is for this reason that the recent inside soft the Sulfain, which aim at stopping this distingurating processon apparent in Turkish social life, are to be having a Christian teacher in his house. These measures become necessary in order to prevent the Turkish woman from becoming a European. The change in this respect is apparent too from the fact that French, English, German, and other modern languages are taking the place of Arabian, Persian, and other Moslem tongues in the education of the higher classes and schools."—Transtation mode for This Literasta Dustr.

#### POINTS OF VIEW.

A VATICAN OFINION.—The Civillà Cattolica (Rome), in a sketch of "Christian Democracy," declares that the l'apacy has always been tha protector of the poor, and insists that theralism will continue to diminish as a force in continental politics, "while the struggle between Christian and Socialist democrace will ever increase in bitterness."

WEANNO ITALY FROM THE TRIFLE ALLIANCE.—France and Italy are now close friends, any the Franch nawapapers. But that fact will not hinder a renewal of the Triple Alliance, according to the Garman press. Exerci important newspaper in Europe is printing editorials on than subject. It is generally admitted that Germany, Austria, and Italy will renew this famous "combine."

FACTS AND PICIUSIS.—The International Statistical Institute held a meting at Rudapest in October. It as inn's to-collect statistical data and make its nefals. "The Technomist Français (Parisi commends this sin, and notes than already the inscritta has made or simulations of figures on the material state in the situation of the properties of the propert

#### NOTABLE BOOKS OF THE DAY.

TWIN HUMORISTS OF AMERICAN DEMOCRACY MR. DOOLFY'S OPINIONS. By F. P. Dunne. Cloth, 51, x 21, in., 21, pp. Price, \$1.50. R. II. Russell

FORTY MODERN FARLES. By George Ade. Cloth, 51; x 71, in , 101 pp. Price, \$1 50. R. H. Russell.

"HE forcing-bed of American journalism has produced a crowded crop of writers of such luxuriant wit that preeminence in humor must bereafter form a principal element in arranging the precedence of our authors. Never had natural selection a fuller field for her weeding out process. It takes a "fit man" to survive. Most of the

humorists who sprang into prominence suddenly have died as quickly, "because they had no depth of earth." Many wrote on, tolerated

because of their former fame. They were " better dead."

Finley Peter Dunne and George Ade are unquestionably the greatest of the later crop of American humorists. They have received their training in the same school, for both are Chicago newspaper men. Each has been warned by the crities, who have pointed to the ending made by Artemus Ward and Bill Nye, with the in-junction "Respice!" The fate of the creator of the immortal "Showman." who died at the zenith of his fame, has been wished for them in all kind ness, rather than the fate of the editor of The Boomerang, whose wit

E. P. DUNNE

grew labored as his life began to wane under the killing contract to supply humor to the American nation by the column in weekly instalments.

Yet Dunne and Ade still flourish. Their humor is equal to every emergency; it expands, like the Constitution, ca proprio vigore. And the reason is, that it has "depth of earth."

The roots of Dooley's philosophy sink through the paving of the "Ar-rchey Road" deep into the continental soil beneath. A son of the city as Mr. Dunne is, seeing only the public side of life as it is presented through the newspapers, he is thoroughly American in his shrewd wit and simple yet profound wisdom. Every discussion ends with a homely epigram which is worthy of Lincoln. We quote a few from the present collection :

- "I think," said Mr. Dooley, "that if th' Christyan Scientists had some science an' th' doctors more Christyanity, it widden't make anny diffrence which ye called in-if ye had a good nurse."
- "No matter whether th' Constitution follows th' flag or not, th' supreme coort follows th' thetion returns."
- "I shud think Schley'd thry an' prove an allybi," Mr. Hennessy suggested pleasantly.
  "He can't," said Mr. Dooley, "His frind Sampson's got that."
- 'Ye can lade a man up to th' university, but ye can't make him think

Mr. Ade's more umbrageous if less aspiring humor derives its sapfrom a less stubborn soil. Its ground has been mellowed by the genera-

tions of humorists who have worked it over and over again with a rotation of various and generous crops. It is provincial life and manners as opposed to metropolitan. His field is the country town where live the good folk of budding social aspirations who ape the customs of the citar

Great American humorists before him. "Max Adeler" and the "Danbury News Man" and H. C. Bunner, have "chronicled the small beer" of village life and decanted it to us without a tang of unkindliness. But Adc's tap has the wholesome bitterness of satire in every drop. He is as stanchly true to the Democratic Ideal as Dunne, and flummery and flun-

keyisin are punctured by his pen as effectively as Imperialism and plutocracy are hammered by Dooley's bungstarter.

He has the same intellectual power of epigram, with the added artis! tic element of phrase-making. What cartoonist could draw a more vivid sketch in fewer lines than this? "Aunt Em . . . was two kinds of a Widow, Grass and Sod. She had buried one Husband and came out in Black. She had tied a Can to No. 2, and came out in Bright Colors. What could be an apter pun than "he had heard that one is permitted a certain Latitude with Widows, and he went in for the whole 180 Degrees"? And as for insight into human nature, certainly the contrast between the realities and identities of life was never more tersely epitomized than in the account of "The Girl Who Could Compromise in a Pineh ":

The Man who wins un certained Regard mass by Tall and Javick, with Rawsh main toosed back from a Borne of Alabaster Whiteness, with Rawsh main toosed back from a Borne of Alabaster Whiteness, whe said as ahe reached for another Olive. \* He must be Hraw, yet Gentien I would have him a Chesterfield as to manners, and as bright as Gentien. #### A NEW INCARNATION OF AN OLD PLOT.

MRS. WINGS OF THE CARRAGE PATCH. By Alice Caldwell Hegan. Cloth. mo, 141 pp. Price, \$1.00. The Century Company,

HERE are several things in the literary line that we do better than our ancestors. If there are not many giants walking up and down the land of books, there are a great many writers of mediocre ability who have mastered a great deal of the writer's eraft that their peers of the thirties knew nothing about. Take the tract-bke

story as an example, the story that shows how cheerful one can be in adversity and what a beautiful sight such cheerfulness is, and how if a sweet young lady would only bring

Christmas baskets to such a poor but brave person, she would undoubtedly find her young man there also "taking an interest"; then they could become reconciled-for, of course, they had quarreled so the story could have a plot. This neat but simple plot was a favorite in the thirties. That it endures in popular favor until today shows what a really good plot it must be, and how near the human henry

Its latest incarnation is in Mrs. Wiggs and the Cabbage Patch. But how the art of telling this artless tale has improved as the years have gone by! All the old incidents are there, the providential basket that

ALRE CALDWELL HEGAN.

arrives on Christmas when the family are sure they are never going to have anything to eat any more; and poor brave little Jimmie dles (bow many brave little Johnnies and Janmies have been so sacrificed to make a Christmas holiday book!). But if the incidents and plots are The second section of the second section of the second section and air has been let in on this old plot

#### LOVE AND VENETIAN GLASS.

MARIETTA: A MAID OF VENICE. By F. Marion Crawford. Clots, 54 x 75

in., 457 pp Price, \$1.50 Macmillan Company

7 HEN one recalls that Marion Crawford's latest povel is the thirty-first that his steadfast pen has set forth, no small praise is his on the ground of industry alone. But as a matter of fact one may almost as surely count on a novel of his being either good or very good, as on his turning out two a year.

"Marietta" may be put with the better ones. It is primarily a love story, with the plot not at all complicated, but with plenty of stirring incidents and fine character drawing, and of unflagging interest throughout. He has chosen the latter part of the fiftcenth century as the period, and selects his principal actors and the mise en scène from the noble gild of glass-workers of Murano, across from Venice.

In a note at the end of the novel, Mr. Crawford acquaints those not as familiar with Italian history as himself that Zorzi Ballarin and Marietta Beroviero were actual persons; but that he has permitted himself an author's privilege in modifying dates and facts, "in writing a story which does not pretend to be historical." No one can demur at his making Zorzi's faithful guardianship of the iron box which contained the priceless secrets of Panlo Gods, and his chivalrous loyalty to Marietta and her father, Angelo Beroviero, such an effective means for his

advancement instead of sticking to the legend that Zorzi stole the box and blackmailed the father into giving him Marietta for wife.

Zorzi is really the character who should have given his name to the story rather than the comely Marietta. The author makes the poor Dalmatian who is Angelo Beroviero's favorite assistant in the laboratory of the glass-works at Murano surpass his famous master in the exculsite art with which he blew and fashioned the molten mass into fantasies of form and his almost as thin and light as the air. Zural also discovered the secret of the "pigeon-blood" red, by a strange accident, and could make white glass more delicate and more strong than that made by any one else. He is as lovable as he is fearless and high-principled, and the trials

through which the alien passed endear him to the reader as they did to Murietta and her futher

Mr. Crawford has "crammed" on Venetian glass and its workers so that he secures the atmosphere of the furnaces and the technical points of the gentle art perfectly. The gild of glass-workers was held in the highest respect, and alliances between them and the patricians were not unfrequent. There was a law that none but a Venetian could practise l'arte del vetro; and this was the handicap under which Zorzi labored until, in the end, the Council of Ten before whom he was tried awarded him spe-

#### THE RELIGION OF CASTE.

ESOTERIC CHRISTIANITY, OR THE LESSER MYSTERIES. By Annie Besant. Cloth, 51/4 x 71/4 in . 384 pp. Price, \$1.30 net. John Lane

T was with hesitancy that Dr. Lyman Abbott recently announced that he was "almost prepared" to "believe all the affirmations of all the creeds and to reject all the denials."

This is catholicity indeed; but the leading apostle of Theosophy, Mrs. Annie Besant, "goes him one better." She has an "affirmative intellect" of a very different sort from that meant by Charles Perguson, in his book of this title. She not only believes all the affirmations of all religions, but accepts all the denials as well! She welcomes every paradox, and grasps both horns of each dilemma, for she has found an ever open way of escape. Her Intellectual House of Refuge is the sanc-

tuary of the Occult, and she can always take asylum therein when hard

## CURRENT POETRY.

#### Extracts from Rudyard Kipling's New Poem, "The Islanders."

(From the London Times, January 4.)
Fenced by your careful fathers, ringed by your leaden seas.

Long did ye wake in quiet, and long lie down at ease;

Till ye said of Strife: "What is it?" Of the Sword: "It is far from our ken"; Till ye made a sport of your shrunken hosts and a

your shame revealed.

At the hands of a little people, few but apt in the field.

Yet ye were saved by a remnant (and your land's long-suffering Star).

When your strong men cheered in their millions

while your striplings went to war, Sons of the sheltered city-unmade, us ordled, unmeet -Yn pushed them raw to the battle as ye picked

them raw from the street.

And what did ye look they should compass

War-craft learned in a breath?

Knowledge unto occasion at the first far view of

Death?
So! And ye train your horses and the dogs ye feed and prize.

How are the beasts more worthy than the souls you sacrifice? But ye said: "Their valor shall show them"; but ye said: "The end is close";

ye said: "The end is close"; And ye sent them comfits and pictures to help them harry your foes.

# FIRST AID TO THE INJURED IN A RAILWAY ACCIDENT.

or in any other accident where sudden injuries sequire emergency retained can be given by earpbody who knows the instructions contained in "Emergency Notes" or what to till the physician or surgeon arrives. It will be found invaluable in saving life and preventing needless suffering, delth hands. It is smo, clott bound, flustrated, end will be sent to any address postpaid for go etc. PLINK & WAGNALLS COMPANN, New York, are the philithers.

# We Would Give \$50,000 Cash

if the people of the United States could in some way be made to realize that the greatest offer that has ever been made in real estate, or probably ever will be made, is embodied in our proposition to sell a lot in New York City with all city improvements for 1869—because if the situation were actually understood by every person in the country there would not be one single foot of property left twenty four hours after this knowledge was brought to their attention.

We are selling lots for less than \$500 which are intrinsically worth \$20,000 if you will take into consideration the three elements which have gone to make up values in New York City outside of fashionable districts:—distance from the center, transportation facilities, rate of fare.

The difference is, the \$20,000 lot had transportation to it several years ago, and now is surrounded with houses costing an average of from \$10,000 to \$40,000 apiece, while our land, which has only now just secured this improvement and transportation, must wait until the people realize that these have been secured and until the solidly built portions (now so comparative) close to us) have reached and enveloped us, and actually brought the values where they rightfully belong.

illustrations: Lot on corner 14/th Street and Third Avenue, New York City, worth in 1881, \$1,900, sold in spring of 1901 for \$50,000 to Henry Lewis Morris. It in grandstates sold it for \$4,5 in 1852. Lot on 80th Street, opposite Central Park, sold in 1859 for \$5,00, in 1910 brought or price that aboved on Increase of \$900 every to days from 1850 to 1901. Authority, Real Patate Editor New York Sun.)

Corner of Utica Avenue and Linden Boulevard, Rugby.

This increase will be maintained as surely as New York is destined to grow. As surely as equal transportation makes equal values, so surely will this lot be worth as much relatively as the lot in upper Manhattan.

We can prove it if you come to New York. We will try to prove it if you will send us your name and address. Is it not worth your while? We ask nothing of you except a letter or a postal. If we were sure you were in good earnest we would far rather say, send us your name and we will send you tickets to New York. This you know is obviously impossible, but if you will let us put the matter before you we will in some way prove that our proposition is a sound one, if we have to bring you to New York to do it.

What we want is to have you know that we are honest, and that every statement we make is incontrovertible truth. Then we are absolutely certain that we can do business together.

We sell a \$480 lot for \$10 down and \$6 per month. This carries a life insurance, a guaranteed increase of \$20 \( \frac{6} \) in one year, a free round-trip to New York (east of Chicago, or a like distance), all improvements, your money back with 6 \( \frac{6} \) interest if not found as represented. What more can we do? Now, will you send us your name?

#### PERSONALS.

Chevalier and the New York Reporters,-When the "camera fiend" and the American newspaper reporter are conjoined in one iodividual, the combination is irresistible, as Albert Chevalier, the music-hall singer of "coster soogs," found open his visit to New York in 1896. He relates the incident in his reminiscences. "Refore I Forget "... jost unblished in London :

"On the night of my errival, for reasons already given. I was tired out. I tumbled into hed and slept like a top. My sitting-, bed-, and bath-room were on the same floor. The following morolog. when I was in my bath, I heard somebody apparently moving the furniture about in the sittingroom. I pot my head out of the bath-room door and, to my amazement, saw two gentlemen busils engaged in acrewing together a photographic camera-stand. I was too staggered to say any

LEARN PROOFREADING

Dr. Talmage Scores the Married Men Who Flirt,-" The most worthy thing for thousands of married men [who flir1] is to go home and apologize for past neglect and brighten up their old love. Take up the family Bible and read the record of the marriage day. Open the drawer of relics and the box inside the drawer containing the trinkets of your dead child. Take up the pack of yellow-covered letters that were written before you became one. Rehearse the scenes of joy and sorrow in which you have mingled. Put all these things as fuel on the altar, and by a coal of sacred fire rekindle the extingwished light. It was a blast from hell that blew it out, and a gale from heaven will fan it into a blaze,"-From "The Marriage Ring," by T. De Witt Talmage. \$1.00. Funk & Wagnalls Company, New York.

"The Marriage Ring" Ic a collection of fifteen remarkable sermons on merriage, family sies, and duties. They are examplee of this world-famous preachere' most interesting and forceful pulpit uttersorce.

thing, but they courteously not me at my ease by informing me that they represented the New York ——— (a newspaper). They were denoted to call with the object of obtaining three photographs of me depicting the following emotions: Surprise, Joy, and Disgust. 1 told them I should have difficulty in supplying the middle one, but the other two I had on hand. 'You are too good.' was the answer. 'Don't hurry-continue your ablutions. We'll wait till you're dry." photos were taken, and in due conrae published. had a frantic struggle about the second, but they declined to go until I placed my 'loy ' on record."

An amusing incident of how he was forced to work his muse under most uninspiring conditions also in New York is told as follows:

"I turned into bed about 4 AM. It seemed to me that I had only just gone off to sleep when a knock at the door woke me up. Some one was brought to me. Needless to say it belonged to a press representative. I dressed hurriedly wondering what business could possibly necessitate such an early call. My visitor represented the New York Journal. He apologized profusely for disturbing me, 'but,' said be, 'it is quite unavoidable, as we want to publish a song specially written I would look through my papers for something spitable, and if I could find it I would send it on Immediately. Holding out my hand I wished him 'Good-morning.' He took my hand, and did not let go until he had me understand that he must have the song before leaving. 'How about music? said I. 'Oh! that'll be all right! Don't you worry about that! I took the liberty of looking Mr. West up before coming to see you. He'll be here in a few minutes. If you will just knock off a comple of verses and a chorus, he can get to work on it when he arrives."

"I tried to temporize, but he would have none of it. What he wanted was a song, and a song he meant to have! At this moment West entered the room, rabbing his eyes. 'Have you done it?' be inquired, vawning, 'Done it!' said I, '1 haven't the ghost of an idea what to write about. 'Hand it over as soon as possible,' said West, throwing himself into an easy-chair. 'I can't keep my eyes open, 1'll have forty winks. Wake me np when you've dashed it off?" A lond snore informed me that I had wasted a look of bitter reproach. 'What sort of a song do you want?' I inquired in desperation. 'Just whatever you care to write. You won't mind if I smoke? You're very kind. I'll wait for the inspiration!' . . . . I thought to tire him ont but he wasn't built that way. I deliberately sat down and wrote one way. I denderately sat down and write one verse and a chorus. They were very bad, but he said that didn't matter. He wanted another Then I struck. I was too ashamed of what I had done to prolong the torture by so much as even one additional line, and I told him so. Seeing that he was not likely to get any more out of me, he woke West up, and 'encouraged' him to compose a melody. West dived into his inexhanstible tone fund, and within an hour the work was finished. The following Sunday this atrocions composition (I allude to my share) occupied the whole front page of the New York Journal,

#### Wins Command by Chess-Playing.

Capt. Charles E, Clark, who brought the Oregon safely at high rate of speed half-way round the globe in time to join in the sea fight off Santiago, and who has now been made commander of the Naval Asylum near Phliadelphia, le one of the most skilful Chess-players in the United States Before his selection to command the Oregon he was in charge of the gunboat Bennington, which was frequently stationed in San Prancisco Bay. His favorite rendesense on shore was the social room of the Mercaptile Library Club of the California metropolis. Numbers of adroit Chess-players congregated there, but no matter how adept, they all went down in defeat before Captain Clark. When engaged in a game he played with great intensity. Perspiration bathed him, and invitations to refreshment were unbeeded, There was no money at stake, but the Captain played as if struggling for a fortune.

This trait of doing thoroughly whatever he set out to accomplish was considerably talked about, and finally the flattering gossip reached the Navy

## Vanderbilt's Way.

A Reason Why Men Do Not Go To Church .- "If a church is a floating iceberg, every man shouts to every other man, Keep out of its way!' He may be drowning. but will make his death-struggle to get away from its coldness and its helplessness. Many churches are refrigerators. The church army has gone into winter quarters. The cold world wante warm words, warm smiles, warm welcomes, warm hearts, warm prayers, and the warm atmosphere of the brotherhood of man in the place where they teach the fatherhood of God."—From "Why Men Do Not Go to Church," by Rev. Cortland Myers. 60 cents. Funk & Wagnalls Company, New York.

This little book was withen by a clergyman who has overcome the problem which is indicated by be title. He is pastor of a church in Brooklyn which seats over 2,000 people. Late comers are confronted with a sign which reads 1" No Admission After Beginning of Service."

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

# Heart Disease

Ninety Per Cent of it Really Caused From Poor Digestion.

Real organic heart trouble is incurable, but

scarcely one case in a hundred is organic. The action of the heart and stomach are both controlled by the same great nerves, the sympathetic and uneumornatric, and when the stomach fails to

properly digest the food and it lies in the stomach fermenting, gases are formed which distend the organ causing pressure on the heart and lungs causing palpitation, irregularity and shortness of breath.

The danger from this condition is that the contimed disturbance of the heart scoper or later may cause real organic heart trouble and in fact fre-

quently does so. Purthermore, poor digestion makes the blood thin and watery and deficient in red corpuscies, and this

further irritates and weakens the heart. The most sensible thing to do for heart trouble is to insure the digestion and assimilation of the food. This can be done by the regular use after meals of some safe, pleasant and effective digestive preparation, like Stuart's Dyspepsia Tablets which may be

found at most drug stores and which contain the necessary digestive elements in a pleasant, convenient form. Thousands of people keep well and vigorous by keeping their digestion perfect by observing the rule

of taking one or two of these tablets after each meal, or at least after each hearty meal. Stuart's Dyspepsia Tablets contain U. S. P. pepsin, diastase from malt and other natural digestives

which act only on the food, digesting it perfectly and preventing acidity, gases, and the many diseased conditions which accompany a weak stomach. When Stuart's Dyspepsia Tablets are used you may

know you are not taking into the system any strong medicine or powerful drug but simply the natural digestive elements which overy weak stomach lacks. So widely know and popular have these tablets become that they are now sold by every druggist in the United States, Canada and Great Britain.

Department, and when it became necessary to select a man for the critical work of doubling a continent in time of war, the officer who was known to engage in even a social game as if his life depended on the outcome was strongly rece mended

There was a discussion over the question in Secretary Long's office and afterward in the Bureau of Navigation. Various incidents in Captain Clark's career were cited to demonstrate his Stress for such an and actabing

\*But has he the stick-to-it-eveness to take him clear through?" was asked by one officer.

"Did von ever see him play Chesa?" rejoined

No one else present had seen him in a game, and they asked, moreover, what that had to do with theoree

"Everything," was the Clark man's reply, "Strategy as learned on the Chess-board is not a bad training as a preliminary to naval tactica, and then he told of Captain Clark's intense and determined application when engaged in a game. "If any man," he added, "can pilot that battle-ship safely through the Pacific and bring it promptly into action in Atlantic waters it's Clark

Officials in the Navy Department seemed to be impressed. A few hours later orders were sent Captain Clark to command the Oregon and to sail with her for Cuban waters - Saturday Evening

## JUST PUBLISHED

# The Life of St. Paul

Harmonized in Scripture Language

By REV. S. W. PRATT

HE attempt has been made in this volume to give the full text, in a harmonious chronological arrangement, of whatever pertains to Paul's life and work at any one time and place. The plan has been to construct, after the inductive method, a complete Scriptural life of St. Paul, following in general the record of Luke in the Acts, and presenting in addition thereto, and in chronological order, whatever the Apostle himself has written in his Epistles concerning the same facts and events. and whatever he has written about other parts of his life and work. . . The appendix will be found instructive as showing St. Paul's personal relation to Christ and his claim to Apostleship, his personal appearance, his relation to his companions, and the unity of his teaching, and his personal life and faith.

MARK TWAIN Says:

"I Have Found that One Can Do Without Principles, but Not Without the Funk & Wagnalls Standard Dictionary."

That is the way Mr. Clemens puts it. Other men prominent in the world of letters and eminent authorities in other walks of life, some of them rulers of nations, have expressed themselves in different words. But their opinions have unanimously agreed as to the indisputable superiority of the Standard Dictionary, Cyclopedia, and Atlas of the World. And when one stops to consider the infinite care and studious regard for detail which has characterized the compilation of this massive work, the appreciation of these men is seen to be but natural.

Take the vocabulary section as an illustration. It contains over 304,000 words, all selected with a discriminative regard for their value. These words in their definition, received the concise and accurate treatment of hundreds of specialists, each devoting his mental energies to his own specialized field of endeavor. Quite different from the old-time method where a few learned men attempted to define in a lexicon all the terms of speech. The result of their efforts were necessarily unsatisfactory. There were 247 editors and specialists engaged on the "Standard." It defines over 79,000 more words than its nearest rival, and \$54,000 more than the recent edition of Webster's International

Dictionary.

The "Standard" has the only systematic
The "Standard" has the only systematic method for compounding words. The Critic, New York, referring to this feature, says: "Compound words are for the first time in any English dictionary treated on a scientific system, which we think will commend itself to scholars and critics."

There are 125,000 synonyms and antonyms in the "Standard." This feature, together with the department devoted to "faulty diction," will be found of inestimable benefit to writers and speakers who are anxious to use the proper

word in its proper place. As an example, instead of saying, "I sub-scribe to the above statement," better say, "I subscribe to the foregoing statement," since above is properly an adverb and not an adjective, still less, if possible, a noun. Do not say, "He was terribly aggravated"; better say, "He was terribly provoked or exasperated." A fever or misfortune may be aggravated, but not

The number of fine distinctions in the use of words which are treated in the "Standard" almost illimitable.

As a cyclopedia the "Standard" condenses a As a cyclopedia the "Standard" condenses a wondrous amount of information into the most helpful form. There are 88 pages of large full-page and double-page maps, printed in colors, with marginal indexes. There is also a description of the colors of the c tive compendium of the various countries of the globe in this edition.

This great work can be secured upon very and send it at once we will enroll you in the Washington Educational League. # BLACK AND RICH

Is the Way Postum Coffee Should Be.

A liquid food that will help a person break a bad habit is worth knowing of. The president of one of the state associations of the W. C. T. U., who naturally does not want her name given, writes as follows: "Whenever I was obliged to go without coffee for breakfast a dull, distracting headache would come on before noon. I discovered that, in reality, the nerves were crying out for their accustomed stimulant.

At evening dinner I had been taught by experience that I must refrain from coffee or pass a sleepless night. In the summer of 1900, while visiting a physician and his wife, I was served with a most excellent coffee at their dainty and elegant table and, upon innuiry, discovered that this charming beverage Postum Food Coffee, and that the family had been greatly benefited by leaving off coffee and using I was so in love with it, and so pleased with the glimpse of freedom from my one bondage of habit and so thoroughly convinced that I ought to break with my captor, that upon my return home I at once began the

since, now more than a year.

I don't know what sick headache is now, and my nerves are steady and I sleep sound generally eight hours regularly. I used to become bilious frequently and require physic, now seldom ever have that experi-

I have learned that long boiling is absolutely essen tial to furnish good Postum. That makes it clear, black and rich as any Mocha and Java blend. Please withhold my name, but you may use the letter for the good it may do."

# **104 SETS**

N the first of last September we announced our half-price introductory sale of the New International Shakespeare. This edition of Shakespeare has many points of superiority over all other editions heretofore published, in the way of noies, critical comments, prefaces and illustrations. It is arranged and edited on new and origical lines to meet the requirements of modern scholarship. To introduce it to lovers of despeare we decided to sell the first edition at half price and on the easy payment plan.

Since our preliminary announcement we have received orders from every part of the United States and Canada. Among those who have purchased sets are business men, lawyers. Congressmen, teachers, mechanics, clergymen, farmers, physicians and Governors of States. No other edition has received such wide-spread and universal popularity. All that now remains of the first edition is 104 sets, which are to be sold at halfprice. The coupon in the lower right-hand corner will bring you a set for examination (express paid by us) and you may return it if it is not satisfactory. Remember that to secure a set at half-price you must be frompt.

# The New International Edition

This edition reproduces the Cambridge text, which has been for forty years the standard text of Shacespears. It comists (Bossaries explaining all the old sixteem) tentury words. Critical and Explanatory Notes discussing the difficult passages and making their meaning clear. Prefaces giving a history of each play, and Critical Combination of the companies of the being rare woodcuts of shakespears is time. Inere are also full-page chromatic plates and photogravities on japan veillum. Included with the set is a "Life of Shakespears" by Jarael Gollancz, with estimates of Shakespears's genius by Walter Bagehot, Leslie Stephen and Thomas Spencer Baynes. Shakespear's genius by Walter Bagehot, Leslie Capter Complete Challespears, and Poems. A set of this edition is a complete Shakespearian Library.

The sets are in 13 handsome volumes containing over 7,000 pages. Size of volumes 8 x 5 1/4 inches. The bindings are in half leather and English art cloth.

# Sets at Half-price—If you are prompt

Of the first edition 104 sets remain. These sets are printed from new plates and In the lirst colline, It's sets rémain. These sets are printed from new paises ar are splendid speciennes of modern book-making. They will be sold—as long as they last—at half-price. The special price of a set in half-leather binding is \$21,000, and for a set in club hidding \$18.000, and you can pay at the rate of \$1.000 a month. This is a little more than the actual cost of printing and binding. We seed on the books to you without cost on your pars and you do not That are the printing and the printing an buy until you see them. If they are not satisfactory, you may return them at our expense.

FREE Each subscriber to the first edition will receive free a conplete Topical Index, handsomely bound, also a Method of
Study, with selected Lists of questions on each play. The

Here DEPKW pets you off your guard with a laugh, before his been blade, with a quick thraut, drives home the truth. Here may be seen something of that marvelwns power and poise by which BECUIRS, single-handed and single-provinced, conquest over the howing mobs in English halls, and won from hostile crowds a hearing for the Union case. Here the reader, as he feels the truth off of RAD VIS immortal words on "The New South," realizes something of the wondrous change of national feeling wrught thrill of OADJ'S immortal words on "The New South, resurses sometiming of the woodrous change of national resum, wrong by "the velvet splendor of that mellow tongue," and how it was that by that banques speech in a single night the speaker "leaped into national fame." Here such men as GLADSTONE, and CHOATE, EVARTS and CURTIS, HILLIS and GOUGH reveal in their words something of the secret which every applying man longs to penetrate—the erect of power. over the minds of men. To live with, and absorb such power from this inexhaustible storehouse of intellectual food

and stimulus, affords not only an equipment for success in life, but is an opportunity which, if used, will develop the reader into a higher type of man.

Special Offer Alarge, handsome port-folio, containing 11 sam-ple photogravures and chromatic plates, and so specimen pages of brilliant After-dinner Speeches, Lectures, Addresses, Anecdotes, etc., will be sent free of charge, on request. With this we will also submit a special proposition which easily will place this great work in your possession.

## TOPICS OF THE DAY.

#### MEANING OF PRINCE HENRY'S VISIT.

THE ado that is to be made over the launching of a yacht now being built on Shooter's Island, near New York City, is stirring up the press of two continents; and, to judge from the comment, the ado, not the yacht, will be the main thing. The yacht, which is to be named The Meteor, is being built for Emperor William, and

PRINCE HENRY OF PRUSSI.

by a rear admiral with a squadron of men-of-war.

he has asked Miss Alice Roosevelt. daughter of the President, to christen the craft. As the Buffalo News puts it, she is to he the yacht's godmother. In celebration of this event Prince Henry of Prussia, brother of the Kaiser, will be present with an imposing retinue, and the President and Cabinet will also grace the occasion. There will be speeches, the papers say, and suppers; salutes, and general felicitation. The Emperor's yacht Ho. henzollern will be here, the despatch-

here, the despatches from Berlin report, and the prince is to be met on his arrival

This visit and the attendant festivities are expected, as the Pittshurg Chronicle-Telegraph says, to "do more to scatter the clouds of suspicion and distrust which have been gathering,

from sheer misunderstanding, than months of dijolomatic explanatory interchanges. The visit is "a enautable compliment," declares the New York Exeming Post, and in view of it "even the most jingo editor misunders that the Empiror has nothing but the friendliest feelings toward the United States," It "reveals the Kaser, "binks the Philadelphia Press,

not only "as a man of consummate tact, but as a long-headed statesman who may easily give his British friends cause to wonder and ponder." The Brooklyn Times says:

"The fact that there are so many points of contact between the two nations which are constantly liable to develop friction and unfriendliness makes such a demonstration of fraternity all the more welcome and valuable. We are rivals of Germany in trade and commerce; we have had frequent oceasion to complain of unfriendly discrimination against our products, and we have to maintain constant watchfulness to guard against German encroachments in South

MISS ALICE ROOSEVELT.

America. But these things make it all the more important that the interests we have in common should be constantly horne in mind, and that every legitimate opportunity should be taken to strengthen the ties that unito the two countries."

Other papers are less cathusiastic. Prince Henry "will scarcely awaken as much popular interest as would some of the great lights of literature or science or of invention of the Old World," asy the Brooklyn Sandars-fr. Vinio," and the New York Mail and Express ventures the prediction that he "will probably be almost as spoular as Sir Thomas Lipton." Manila Bay is evidently in the mind of the New York Press when it says that "the warmth of his welvome will have to thaw out the recollection of the performance of a German facet concerning which there is no pleasant fiction, but merely some rather exacerbating facts." The Brooklyn Engle remarks humorously:

"We have a tot of things to show Prince Henry of Prussia when he comes our way. Of course he has picture-galleries and parks and arches and statues at home which are quite as good and perhaps better than ours, but Berlin has no skyscrapers, on big suspension bridges, no bossy car-conductors, no broken-down political machines, no colored supplements. We will show him how a great subway is built at a minimum of expense and a maximum of discomfort, and we will explain the mystery of the publication of six o'clock extras at nine in the norming. We will take him to Niagara and to Tammany Hail and guarantee that he will not be robbed at either place, and if he has the time and the inclination we will show him the marvies of the Vellowstone and the wonders of the Yosemite. Chicago wants him when the effect East is through with him, and anything Chicago wants real hadly she is pretty sure to get, whether it be a world's fair or an errant prince; there he will see the stock-yards appearance of the perhaps allow his royal hand to be shaken by Hinky Dink and Bathhouse John.

# PHILIPPINE DEATHS, WOUNDS, AND

THE cost of giving liberty or death to the Filipinos has been put in graphic form by the New York Anti-Imperiajis League in the accompanying diagrams. The diagrams cover the period from May, 1990, to June 30, 1901, and are prepared

swers: Not even from the gross view of dollars and cents. Mr. M. N. Forney, who prepared the diagram for the league says: "The sickness is not represented. Neither are the sorrow, suffering, and poverty which are the consequences of this destruction of Hife and bealth."

#### MR. SCHWAB AS A GAMBLER.

DESPATCHES from Monte Carlo last week to the effect that the president of the steel trust was haunting the gamingtables at Monte Carlo and was winning and losing money in \$10,000 lumps, while great crowds looked on in wonder and admiration, brought out some reproving comment from the American press. Mr. Schwab was upheld in his reported "plunging" by the New York Morning Telegraph, a Tammany and sporting daily, and the Baltimore American suggested humoronsly that he might in this way show Mr. Carnegie how to avoid the disgrace of dying rich; but most of the papers took the view expressed by the New York Times, that "a man who is at the head of a corporation with more than a billion dollars of capital stock, which controls a great part of one of the chief industries of a great nation, and of which the securities are offered to the public as a safe and profitable investment, is under obligation to take some thought of his responsibilities and his example." "If any minor employee of the United States Steel Corporation," said the Rochester Democrat and Chronicle, "should conduct himself in New York as President Schwab is conducting himself at Monte Carlo, and President Schwah should find it out, the United States Steel Corporation would speedily dispense with that minor employee's services."

Some of the Wall Street magnates interested in the big steel concern took a similar view, according to the New York Herald, and two cablegrams inspired by Mr. Morgan and Mr. Carnegre were sent to Mr. Schwab, suggesting the desirability of a prompt and explicit denial. At any rate, Mr. Schwab sent a cablegram to the Associated Press, saying that he "did visit the Casino at Monte Carlo," but that "the statements of sensational gambling are false." Some of the newspapers decline to be satisfied with this form of denial. The despatch does "little more than make the best of a bad case," says the New York Times, for "instead of denying the gambling, it merely denied that the gambling was "sensational"; and the New York Evening Post remarks that the disclaimer "suggests certain doubts." The Times goes on to say:

"The 'sensation' was due to the revelation that a man who has assumed responsibilities so numerous and so heavy should publicly join the intellectual and social dregs of Europe around the gaming-tables of Monte Carlo, and there make a more or less prolonged effort to 'beat' a game which to a mathematical certainty can not be beaten. It was the folly of the proceeding, quite as much as its wickedness or its bad taste, that shocked the business world, while the world not of business noted with disdainful amusement that this great captain of industry and finance could find nothing better to do with his rare leisure than to participate in an ignoble and hopeless battle with the laws of chance. Perhaps if Mr. Schwab had more of the education which it is his habit to decry as useless for men of affairs he would not have betrayed so pitiful a lack of mental resources the moment he was freed from his accustomed occupations, and, with the doors to all the artistic and historic treasures of Europe opened by his wealth, he would not have been obliged to offend and alarm so large a fraction of his fellow countrymen."

The Springfield Republican remarks:

"Mr. Schwab might reply that his Monte Carlo diversion is quite as harmless and innocent as the business of some of the Wall Street habitués and promoters of the Amalgamated Copper games, who play for much higher stakes and who play, more over, nuder the approving of tolerant sanction of metropolitas society. Such a game as that conducted in copper by mon of the first eminence in our financial world has caused more ruin and suicides within two montts than the Prince of Monaco's gambling-den has caused in a year or several years, and it has been far more demoralizing to social solviety, honevity, and contentment. Mr. Schwab's sown trust is something of a game of chazer in which popel are invited to atkee a share of their possessions. Certainly this is a fair description of a venture which brings together properties worth in all probability on tenut if any over

CAPT CHARLES E. CLARK.

\$500,000,000, capitalizes them at \$1,300,000,000, and scatters the securities as widely as possible among the investing public. No one can tell how it will work out. As a method of acquiring unearned wealth quickly and in large chunks for a small group of men, the game at Monte Carlo Is not to be mentioned with this of promoting a highly inflated trust in the United States. The president of the United States Steel Corporation seems to be

connection with his business at home.

WHITELAW REID From the painting by Eastman Johnson,

the office so long ago were 'promised' to him, Mr. Reid must have been in the field in quest of it. There are few things that Mr. Reid wants from the Government, but when the coronations come along his application is filed right early. Another opportunity is now offered to him to wear the red plush breeches

which gave to his legs their brilliantly imperial tint at the time of the Queen's jubilee.

It has already been said that this nomination was supremely fitting from the British viewpoint, but what may be said of it from the American viewpoint? Could an appointment have been made that would have been more offensive to that large portion of the people who sympathize with the Boers in their marvelous struggle for nationality and freedom? Surely the President, who is himself at heart a Boer sympathizer, because of the Dutch In him, does not wish it to be inferred that he considers Mr. Reid an exponent of the predominant American feeling regarding the destruction of republics in Africa.

"Our coronation ambassador has been the leading journalistic apologist in America for the crime being perpetrated against republican institutions and the Dutch nationality in South Africa. When Stormberg and Magersfontein and Colenso occurred, Mr. Reid was sunk in gloom; but when Cronje surrendered he exultantly wrote to his English friends and told them what an immense weight had been lifted from his mind.

"Why should any American exult over the downfall of republicanism; and why, especially, should any American be glad over the annihilation of a republicanism that had back of it one of the sturdiest white races in the world-that race which wrenched Holland from Philip II., and which may be trusted anywhere to hold up the torch of civilization if permitted to develop according to its own race instinct and character?

"There was mention of a real American for this gorgeous pageant—Grover Cleveland—but, so far as can be learned, the post was not even offered to him. Mr. Cleveland would probably have declined the honor, but there would have been a satisfaction in knowing that his Americanism was considered good enough to be exhibited in marble halls among the earls and 'earlesses' and all the ceremonial show pieces of royalty at the approaching festivities.

#### THE CORONATION EMBASSY AND ITS CRITICS

manifesting abroad a spirit which he acquired in pretty close

A LMOST all the daily papers heartily approve the President's choice of Whitelaw Reid, Gen, James H. Wilson. and Capt. Charles E. Clark as special representatives of this country at the coronation of King Edward VII. The New York Sun, for example, says:

"President Roosevelt has selected the special embassy to represent the United States at the coronation of Edward VII. next summer with notable discrimination.

"For the ambassador-in-chief no American can compare in experience with Mr. Whitelaw Reid.

"The representative of the army, Gen. James H. Wilson, is one of the most distinguished of the officers surviving from the Civil War

"The representative of the navy, Captain Clark, as the once commander of the Oregon acquired a fame of which his own country is proud and which all others must respect.

"And the secretaries are all fine young men, some of them to be heard from later.

"May sweetness and light attend the embassy from the time it leaves the home shores until its return."

A few papers, however, are disposed to be critical. The New York Herald thinks that "it is impossible not to question good judgment and perhaps even the good taste of these appointments," and says that the army and navy should have been represented by General Miles and Admiral Dewey. Mr. Reid's appointment is handled as follows by the Springfield Republican:

"Whitelaw Reid's nomination as coronation ambassador, explains our Washington correspondent, was first promised to him by President Mckinley. 'President Roosevelt has simply re-spected that promise.' The inference seems legitimate that, if

Exodus of Skilled Workmen from Trust Mills,-The labor papers declare that for the past six months or a year skilled workmen in the Iron and steel industry have been leaving the trust mills to start or to work in independent plants. The National Labor Tribune (Pittsburg) comments upon this exodue as follows .

"There are various reasons for the preference the skilled work-

ers, most of them members of the Amaigamated Association, are thus showing for the milliard concerns outside the trust. One is that in independent mills they are not liable to the grinding exactions of mill superintendents who know that their cost sheets will be compared with the sheets of dozens of other superintendents in the same employ. Another reason is that the independent mills have, on the whole, exhibited in more cordial attitude toward the workers' organization. Whether the shrewd business men in countrol of the trust will allow the soular to go be questioned. The independents have certainly not been getting the worst of it so far as the problem of first-class skilled labor supply is concerned.

"It is a well-defined and formidable movement, which must quietly be having its effect on character of product, and which we would respectfully suggest to trust managers that they will have to do something sooner or later to stop and counteract."

# AMERICAN AND FOREIGN SHIPBUILDING IN

A MONG the branches of industry in which America do not "lick creation" are the building and the sailing of ships. The statistics for last year, which are now available, sho the United Kingdom is still far in the lead. Figures quoted in the New York Journal of Commerce credit that nation with more than two-thirds of the world's shipbuilding last year, 1,797,675 tons, against 857,690 for the rest of mankind. The United States and Germany follow at a distance, the former with 279,-007 tons, and the latter with 265,860; and then comes another long interval, followed by France with 85,971, Holland with 53,-789, and Norway and Sweden with 50,666. Italy, Denmark, Japan, and Austria form the next group, ranging from 27,000 to 20,000 tons; China, the British colonies, and Russia built 122 little vessels whose total tonnage, all told, was about equal to . The Cellic (21,000 tons), and Spain and Greece each constructed two vessels about the size of ferryboats. According to these figures, the United States has advanced-very rapidly in shipbuilding in the last twelve months, the record for 1901 (279,097 tons) showing a 50 per cent. gain over 1900 (179,838 tons). British shipbuilding in the same period gained 7 per cent. More than half the world's ocean commerce still floats under the British flag, but a number of British lines are owned by American capital; and the Glasgow Herald reports that American capitalists have their eyes on the great Clyde shipyards. It says:

"There is less reason to smile at the story of how American capitalists are to acquire all the Clyde shipyards than most

people seem to imagine.
"As a simple matter of fact, agents from America really did

approach more than one Clyde firm with proposals for absorbing or reconstructing their establishments under American anspices. True, the proposals, the tillked over, were ultimately set aside; but that they were talked over is significant, and in spite of the maiff difficulties that stand in the way of an extensive invasion of the Clyde by merican capital, this invasion must be treated, not perhaps at the slability, but as a possibility. There never was a time when dappind, with the consequent power to conduct to the up-te-date shipbuilding firm. Shipbuilding is becoming more and hore an international industry, and the man who would succeed in it upst-deck always keep before his mind.\*

#### The Milwankee Wisconsin says

"The report to his Government of the Terman anaval construction who recently completed in tour of Medestigation of the in the achievements of American energy and American braven. But it contains a warning which should not be overlooked in the announcement that the labor-assing deedless digits have enabled shipbnilders on this side of the Atlantic to vettome the disadvantage of tremendously higher rates of wages with a conspicuously larger production will soon be installed in the shipyards of Europe. The need of the adoption of these labor-assing devices and methods is probably the main revelation in the report of the German offigial. The machinery can be readily purchased, and if the freedom working means can be brought to a realization of the necessity of Suddning his deeply rooted prejudice against labor-saving devices and leading hisment enthusiantically to the institution of the control of

"There is food for thought in the German expert's observation that American shipbuilders are troubled by wide fluctuations in the cost of material. Why fluctuations should be more severe on this side of the Atlantic than in foreign countries does not appear at first blinsh, altho every effect has its cause. Fluctuations of oper cent, in the cost of materials in a few months is an element of uncertainty that can not but interfere with the development of an industry. There is no danger that American workingmon will not be writing machinery with which they have been long familiar; and it ought to be equally sure that America, with its superior productive power, can supply the needs of shipbuilders without imposing premium prices."

CONGRESS SEEMS TO BE IN 4 BOAT.

# CHANGING CHARACTER OF OUR

WITH the people of foreign countries coming here at the rate of a thousand a day, it becomes important to inquire into their character. In the last ten years 3,79,0000 straugers have come to us, enough to repeople the city of New York. If such a repopulation of the metropols had been accomplished with the immigrants of twenty years ago, seven-neighbles of the city's population would have been flound to be natives of Germany, the United Kingdom, and the Scandanavan countries; but if it should be done with the immigrants of to-day, five-sixths would be found to be natives of Indv. Austra. Russia.

and other countries whose emigrants are not considered so desirable. The labor papers look upon this change with especial concern, because they think that the flood of immigrants from Russia and the countries of Sutthern Europe will mean cheaper labor and lower standards of wages and them.

DECREASING IMMIGRATION FROM ENGLISH AND SAXON COUNTRIES.

Height of column indicates total immigration from these countries; shading shows how this total is made up.

change graphically. The diagram of immigration from Germany, the United Kingdom, and the Scandinavian countries shows a remarkable falling-off, while the diagram of immigration from Austria, Russia, Italy, and other countries shows an equally remarkable, alto irregular, increase. Edward F. Mešseeney, assistant United States commissioner of immigration at the port of New York, says in an article in the same iournal:

"In 80 the center of immigration was in Paris, drawn, with the center at Paris, touching the west coast of Ireland, would include all the territory from which the United States was receiving immigrants. If the bulk of immigration the considered – at Venna; but, geographically, taking into account the growing Oriental movement of Greece, Syria, and Armenia, the center of this circle would be located at Constantiople.

"Owing to the many changes in transportation facilities, the Carpathian and Balkan mountains are nearer to the mining regions of Pennsylvania to-day than Boston

was fifty years ago.

total of coming arrivals. Nine tenths of all Italians come from the extreme southern portion of Italy and the island of Sicily. "In Austria-Hangary] the conflicts between the Czechs and Germans, the Crosts and Hungarians, all go to make poinceal and economic conditions outstable and immigration necess

and economic conditions unstable and immigration necessary. In addition, the independent states to the south are feeling the fever of immigration, and every year shows a greater number coming from the Balkan territory.

Next in importance is Russia, from which we are mainly getting Pules and Jews.

"After the cusuale the kings of Poland invited the Jews, whose headquarters were about Frankfort, in Germany, to come into Poland; and since that time they have increased until four-fitths of all the Jews are now in that section of the world.

where they have been

[January 25, 1902

England, about ten years before coming here. During the time of Catherine a large number of Germans were induced to go to Russia, where they have resided ever since. They have never become Russianized to the slightest degree, and are to-day leaving Russia and coming to the United States and going to the West, where they are popularly known as the 'Mennonites,' and as a hardworking and industrious people.

"From Asia Minor we are receiving Syrlans and Armenians, who are undesirable in every way.

The present era of immigration is a movement of people asso-

ciated with a low degree of civilization, caused by a demand for manual labor, and encouraged by easy transportation facilities. 'Italy is encouraging its surplus labor to emigrate, and re-

gards Italians in the United States and South America as Italian colonists, subject to the authority of, and sources of income to, the Italian Government.

"Russia-overbearing and progressive, with modern ideas-is discouraging the emigration of that element of its population which would be most welcome to the United States, and encouraging the other. Taking advantage of all modern methods of machinery and progress, it is reaching out toward Manchuria and other parts of China, a live, progressive force, which threatens the social and economie destiny of the world."

#### COMPARATIVE GROWTH OF AMERICAN PORTS.

A LTHO New York retains its supremacy among American ports by an enormous margin, and seems to be in no danger whatever of losing its place, statistics just out show that some of the other ports have been cutting into its trade in lively style. New York's foreign trade amounts to more than a billion dollars a year; its nearest competitor is Boston, with only onefifth of that amount : New Orleans has about \$175,000,000, Philadelphia about \$120,000,000. Baltimore about \$125,000,000. Galveston a little over \$100,000,000, and San Francisco about \$70,000,000. The total trade of all these ports, it will be seen, does not equal that of the metropolis,

According to figures published in the New York Journal of Commerce, however, New York is losing trade, in some lines, to the smaller ports. In the export trade in breadstuffs, for instance, while the year closes with a net gain of \$25,000,000 for the country at large, New York appears with a loss of \$5,000,000. New Orleans gained \$9,000,000; Bultimore, \$7,000,000; Boston, \$1,000,000; and Galveston \$2,000,000. The failure of the corn crop caused a falling back of 80,000,000 bushels in the corn export trade, and New York led in the march to the rear. In the wheat trade New York finds itself threatened by New Orleans, which has come within 3,000,000 bushels of its total outgo. New York exported 27, 100,000 bushels, New Orieans, 24,400,000. In the matter of increase in wheat shipments New York is led by New Orleans and Baltimore, and is nearly equaled by Philadelphia. In out shipments New York fell off 350,000 busheis, while New Orleans gained 950,000; and Philadelphia suffered a spectacular loss of 4,000,000 bushels in this trade. In flour, New York again shows its independence by moving in a direction opposite to that of the other ports. New York's flour shipments decreased 400,000 barrels, while the shipments from New Orleans and Baltimore increased 300,000 each, and the shipments from Newport News increased 500,000. In exports of provisions Boston had an increase of nearly \$10,000,000, New York an increase of over \$9,000,000, and Portland, Me., an increase of about \$7,000,000; Baltimore decreased \$5,000,000.

New Orleans, more than any other port, it appears from these figures, is picking up the trade dropped by New York. An examination of the figures for twenty-five years shows that New York's export trade has grown, with considerable irregularity, until it is double what it was in 1875, and its import trade has gained about sixty per cent, in the same period. Its export trade was \$40,000,000 less last year than it was the year before, and its import trade of last year was ontdone in 1892, 1893, and 1894.

#### FIGHTING INTEMPERANCE WITH ALCOHOL.

HE British reformers who are, in the words of a London preacher, "so astonnded and distracted by the problem of the liquor traffic that they are actually trying now to lessen the evils of this business by going into it themselves" are eredited by the same preacher with at least the merit of novelty, and their efforts are being watched with "benevolent neutrality" by the Church of England Temperance Society and by others interested in moral reforms. The secretary of the People's Refreshment House Association, as the society is called, is Captain F. C. Boehmer, who, in the headquarters in London, "as he smokes his pipe with true English assiduity, directs the operations of eighteen drinking-saloons." The society, which was organized in 1896, is composed of eminent philanthropists and Christian people, with the Bishop of Chester as president. A writer in the Boston Transcript, who describes the working of the system, takes as an example a saloon that the society is about to open in London, He says:

"This drinking-place will be managed by a man who will have no interest whatever in pushing the sale of alcoholic beverages. but who will have a direct pecuniary interest in getting people to take non-alcoholie drinks, because upon the latter, in addition to his fixed salary, he will get a generous commission. He will also have an inducement to push the sale of food, for this department of the business will be entirely his own venture, and to his own private purse will accrue all that can be made out of it. This slum public has hitherto been uncleanly. It has been a place where filthy language could be heard, and where the landlord would have every incentive to encourage excess, and to break the law which forbids the selling of liquor to children and drunkards. But under the People's Refreshment House Association all these features will be changed. The occasional upexpected visit of an inspector will insure scrupulous cleanliness, and also that the atmosphere is kept as pure as possible morally, and that none of the restrictive features of the license laws are broken. Tea, coffee, and cocoa will be obtainable at all hours, and these, with other temperance beverages, will be kept to the front. Always, too, there wili be cool water on the counter for public service without cost. All the same, this house, like the others managed by this reform association, will keep in stock every kind of liquor and beer, and the manager and his barmaids will serve the same to all comers of proper age who do not give evidence of inebriety. They will be obliged to do this, just as other publicans are, by the provisions of their license.

"Naturally one wonders to what extent, if at all, these changes will reduce the consumption of alcoholic beverages. This is a point which the experience of this association, so far as it has gone, has not clearly settled. Experiments at the three reformed houses first tackled is rather against the theory of reduction than in favor of it. The first was a dirty place, and being brightened up, it drew more enstom. In the second case no custom was lost through the change. In the third case there was a falling-off, due to a more aggressive bid for patronage on the part of public houses in the same neighborhood that were run on the old lines. This looks rather ominous. But the movement is perhaps not far enough along to permit clear judgment, and meanwhile it is surely some gain to decency and sobriety to have better management of such places, to have the law rigidly kept, and to know that the profits are for the benefit of the many in public improvements rather than for the enrichment of the few.

"One thing, at any rate, has been demonstrated, and that is that public houses run on this reform basis can be depended upon to yield both the five-per-cent, guaranty to shareholders and the five per cent, for the sinking fund. The People's Refreshment House Association, tho it has been at work but four years, is annually meeting these drafts, and it still, for two years past, has had a surplus of about \$500 a year for distribution to public The progress hitherto has been rather slow, but "recently there has been a marvelous increase of interest":

"New names of the highest distinction are being enrolled, and unlimited capital is offering. The reform indeed seems just now to be gathering to itself a large share of the social and financial strength of the nation. With this quickening of interest a new organization has come into being, called the Public House Trust Company. The aims of this do not differ from those of the older society, and its plans of operation will be the same. But the People's Association, while doing good enough work on a limited scale, shows no signs of organic multiplication; whereas the from London; the management and local propagands will be in the counties and large towns. It is hoped that before long every county and borough will have its own Public House Trust Company. Twenty of these are already formed and getting ready for work, the the new movement is scarcely a year old.

"It must be kept in mind, however, that the distinguished men who are going in for this new reform are not temperance men in the American sense, only in the Scriptural sense. Not one of them is a total abstainer, and none would have anything to do with temperance movements of the ordinary kind, But the public house, as it is, they believe to be a curse. It is run for personal gain, when it ought to be run in the interests of the public. It is a mere drinking-bar, and they want to convert it into a respectable place of refreshment, giving as good a chance to non-intoxicants as to intoxicants, and associating drinking more generally with eating. The Inspiring leader of the Public House Trust movement is Earl Grey, and with him are associated, in addition to those already named, the Duke of Norfolk, the Bishop of Rochester, Earl Stamford, Cardinal Vaughan, head of the Roman Catholic Church in England, the Duke of Northamberland, Lord Stanhope, Lord Goschen, Lord Avebury, known to the philanthropic world as Sir John Lubbock, the Marquis of Ripon, and many others equally distinguished."

#### NEW LEADER OF TAMMANY HALL,

S OME of the papers ontside of New York city think that the ostensible retirement of Richard Croker from the leadership of Tammany Itali is a very significant thing, and they hall the selection of Lewis Nixon to succeed him as an omen of better days for the organization. The New York papers, however, do not share this rosy view; they have many good words for Mr.

Nixon personally, but seriously doubt his ability to reform the "tiger." The new leader is a man of excellent education. He was graduated from the Naval Academy twenty years ago at the head of his class, and was sent to the Royal Naval College in England by the Navy Department. In 1850 he designed the Oregon, Indiana, and Massachuszett, and then resigned from the navy to become apperimenting constructor of the Cramp shipyard, and in 1855 he left that firm to start a shipyard of his own at Elizabeth, N. J., which has proved a very successful enterprise. He is aiso interested in a number of other commercial enterprise.

The New York Sun says of him:

"No leader of the type of Lewis Nixon can make himself indispensable to the organization, or even preeminently valuable to t. Croker does not want a man who would be able to build up around him a machine powerful in itself. He wants a man who is not likely to do this, and he has found that man in Mr. Nixon. In Mr. Nixon, too, he found a man of good personal reputation, to whom Tammany can point as a respectable citizen, who is willing to pose at the head of the organization, who may think that he is at the head of the organization, but who will not stand in the way for a moment if ever the time comes when Mr. Croker wishes to take up the reins again. If Mr. Nixon ever attempts to stand in the way, he will be bowled over and out. He can no more manage the Tammany machine in opposition to the wishes of such a leader as Croker, or any one of half a dozen of the members of the executive committee, than Croker could control the Woman's Christian Temperance Union. He will stand at the head during the lean years that are to come, and in standing there he will offer no opposition worthy the name to the resumption of power by Mr. Croker when the fat years appear.

Tammany comment on the new leader is noticeably meager. The New York Journal asks that Mr. Nixon be not condemned until given a chance to show what he can do; The Daify News, since Mr. Munesy bought it, has not had anything to say about Tammany; and The Merning Telegraph and The Tammany and The Merning Telegraph and The Tammany Times, while telling the news of the change of leaders, do not comment on it. The latter paper reports Mr. Croker as saying in a speech in the meeting in which the change of leaders was made: "If you run this organization homestly and uprightly and in compliance with the laws of your Government, you can never,

"Let the crowned and uncrowned kings meet."
-The Philadelphia North American.

at any time, be beaten." A Chicago paper quotes this remark, and notes that Tammany was beaten at the last election, and asks what is to be inferred.

# SHALL THE PHILIPPINES HAVE A SEPARATE

Till Philippine vivil commission in its last annual report sets forth the importance of establishing a coinage system in the islands under the sanction of American law. Instead of the Mexican silver dollars, upon which the Philippine Islands have relied chiefly for their medium of exchange, the commission recommends "that a special Filipine silver peso be authorized, which shall have the constant value of fifty cents in gold." As to introducing American currency as the exclusive money of the Philippines, the commission does not think it desirable, because of the disturbance to prices and wages which would follow

AT LAST THE CURRENCY QUESTION HAS STRUCK THE PHILIPPINES.

— The St. Paul Pioneer Press,

the introduction of a new and different system of currency. The benefits which would arise from the introduction of American gold, they say, "ean be obtained from the commerce of the United States and that of other gold-standard countries, by establishing a fixed and definite relationship between the proposed silver coin and the American gold dollars," and these benefits "would be especially felt by American importers because of the simplicity of the relation."

In opposition to the proposed special coinage the Manila American prints the following editorial:

"The proposition to have a separate coinage for the Philippines may appeal to some people, but there are others who do not see the advisability of it.

"The Philippines belong to the United States and every commercial and political tie that will in any way assist to bind these islands closer to the States should be regarded as a great advantage.

"It is to our interest that the United States shall acquire a greater persige in the Orient, and the use of American money in these islands will help to attain it. Money is a very important factor in making commercial conquests. To-day the Domittion of Canada, is thoroughly loyal to King Edward, but the Canadians are also devoted to the American dollar. In most parts of Canada, instead of reckoning values in pounds, shillings, and pence, they are computed in dollars and cents. Even if this does not increase, it certainly facilitates trade between Canada and the United States.

"The use of United States money to the exclusion of Mexican currency in the Philippines would be an entering wedge that

would help to open the way for the extension of American trade in the Far East.

"It may be asserted without fear of successful contradiction that money of the United States is acceptable at my time and everywhere. The United States has the largest and the finest mints in the world. No European country begins to coin zo much money, and no fault whatsoever can be found with American coin, save that some of us can never get enough of it.

"No one ever questions the value of American coin. And it is wellnigh impossible to successfully counterfeit it. United States coins are distinguished for their fineness, for their artistic finish, and for their durability. The gold reserve in the Caar of Russlas war chests includes a large amount of American coined gold. The Bank of England cherishes the American eagle is coined form.

"But how does Uncle Sam reciprocate? Every time a mail steamer from Australia arrives in San Francisco thousands, and sometimes lundreds of thousands, of pright new British sovereigns are taken to the United States mint to be melted up and recoined.

"American paper money is convenient, and every one knows

"if American money is so desirable in other parts of the world, will it not answer every purpose in the Philippines? The American dollar is always and everywhere worth 100 cents, but it is proposed to substitute for it in these islands a hybrid dollar that will only be worth 50 cents.

"If coins of that denomination are needed, and business over here, for a while, must largely be transacted on a silver basis, why not make use of the American half-follar? . . . The American 9-cent pieces is of only laft the bulk and weight of the Mexican peso, but it is worth more. And its value is unchangeable. Why? because it can be exchanged for gold at any time. It would be more convenient to use American half-follars, and no one would ever lose anything by their depreciation."

## LETTERS AND ART.

# THE SIGNIFICANCE OF MR. KIPLING'S NEW POEM.

R UDYARD KIPLING'S new poem, "The Islanders," published in part in our columns last week and in full in the London Times (lanuary 4) and The World's Work (New York City), has proved to be much more than a mere literary event. It has assumed the importance of a political utterance of international significance. The Times' editorial prediction that these "ringing and passionate verses" would "stir the blood of all the people of the United Kingdom," and that this "thrilling trumpetcall will not remain without a practical answer," appears to be fully justified, the there seems to be as yet little reason to expect an answer in just the form which the poet urges, namely, military conscription. The reception of the poem in England has been, in fact, a hostile one, and Gilbert Parker's remark that Kipling has produced "a sensational poetical effect at the expense of truth and justice" finds wide approval. Newspaper discussion on the different points made in "The Islanders" has been of the most vigorous character. One pro-Boer journal calls the poet "insolent, mendacious, anemic, and white livered," Even the mildest critics insist that Mr. Kipling's exaggerations exceed the bounds of poetic license. The taunt that the Colonial rides and shoots better than the Islander has hit hard and brings out many attempts at explanation. It is pointed out that in Australia and Canada a horse costs less than a bicycle, and running game is plentiful, while in England deer-shooting and hunting are for the rich only. As for the "flanneled fools at the wickets" and "muddled oais at the goals," the private soldier is even more indlenant than the officer, who indeed expresses himself more in contempt than in anger. Football and cricket, it is claimed on all sides, are themselves a kind of mimic warfare, and have produced even finer men, physically, than the volunteer training, Mr. W. I. Ford, a well-known English cricketer, calls attention to the fact that many "flanneled fools" have died for their country, and Mr. Herbert Paul, writing in the European edition of the New York Herald, under the title "Neurotic Imperialism," declares that "it was on the cricket-field-which Australians, by the way, love as much as Englishmen-that some of the best officers of the British army first distinguished themselves." Says the Detroit Free Press:

"Mr. Kipling's poem has been received with a serloumess that we on this side of the water can not wholly comprehend. He were the first statesman in Europe we might understand it; or, or if he were the prime minister, it would be evident that sught an arraignment of his country's methods might create the most incesse excitement. But Mr. Kipling does not happen to be one of the great constructive statesmen of the century, and certainly the doctrine of his infallibility has never been defined. Even a clever story-writer and a facile rimer is capable of being mischen, and, when this fact is taken into consideration, it is difficult to see why the British nation should work itself into a state of reversible accident to the continuous continuou

"The Islanders" has been commented upon almost as extensively in this country as in England, and many condicting opinions are expressed. The Philadelphia Teicgraph sees the importance of Mr. Kipling's atterance in the fact that "he voices in ringing verse the current idea prevailing at the moment among the people of his country." "Kipling has taken upon himself something of the character of a Hebrew prophet," adds the Minneapolis Journal; "he is the English Jeremiah of the day. He no longer wittes verse merely for so many guineas a line, but to warn, to instruct, and admonish his people." The New York

Nun ruminates on the changing character of the poet's function. It says:

"You think of Wordsworth as mumbling his verse to the amazement of the Rydal peasants; of Cloridge as salling on a sea of opium; of Tennyson, in spite of an occusional war poem in The Timus, as dwelling with Tithous and Ulysses. Keats and Rossetti were as far away from politics as men can be, Matthew Arnold preached to the British Philistine in prose but not in verse. In verse William Morris lived in a remote world, Swinburne shrieks or barks a political psem once in a while, but Swinburne usually abuses the other fellows, not his countrymen, of the contrymen, and the same properties of political point or rather less than a cat affects the tides.

"The general impression is that poets should cultivate poetry as a little rose-garden or cabbage patch of their own, and not meddle with the world outside their hawthorn hedge. Rudyard Kipling is not in the verse-making busness for the beauty of it, but for the sake of the use. His way of regarding 'the nature and functions of the poet,' as the essayissi love to write, is that the poet exists for the sake of stirring and direction; the parties of the sake of stirring and direction; the parties of the sake of stirring and directing the parties of the sake of stirring and directing the parties of the sake of stirring and directing the parties of the sake of stirring and directing the parties of the sake of stirring and directing the parties of the sake of stirring and directing the sake of the sake of stirring and directing the sake of the sake of

The Philadelphia Press considers the new poem a much stronger literary work than any of Mr. Kipling's revent efforts, and a great improvement on the "dull, didactic" verses on "The Reformers" printed last October. In the opinion of the Boston Herald, on the other hand, "The Islanders" is "a metrical essay of no superior vigor of argument or rhetoric"; and the Chicago Record-Herald says: "There is certainly no reason or sense in it, and when even Kipling's admirers say that many of the rimes are atrocious, and that the verses miss being poetry, what is there left to produce any effect on the nation? The wicked 'pro-Boers' alone will derive comfort from this alleged poem, the that can hardly have been Kipling's intention."

The real trouble, declares the Springfield Republican, is that Mr. Kipling is on the wrong side of the whole Boer controversy. It continues:

"The true place for a peet in this dastardly business of ripping up the Reer nationality by the roots is serving as ministrel for the superbest and most desperate deference of the superbest and most desperate deference of the superbest and most desperate deference of the superbest and most desperate deference on the superbest and most desperate deference on the superbest and superbest and superbest and superbest struggle of to,000 brave and determined men against a host of \$20,000 backed by all the resources of the richest and largest empire the world has known? The heroes of this war are Boars; all the glory is theirs. . . . Mr. Kipling may be inspired, but, if he is, his countrymen should be all the quicker to regard his dance he has been leading them with his signing and guidelines. The pied piper of Hamelin was a harmless fellow compared with this inspiring a draw guidelines.

Several papers direct attention to the enrious contrast preseated by the publication in the New York Independent of Mr. Alfred Austin's new poem, "Together," a few days before the date upon which Mr. Kipiling's verses appeared. Mr. Austin's poem is dedicated "with warmest sympathy to the American people," and is a plea for Anglo-American unity. It does not escape the ridicule that has greeted most of the literary efforts of the British poet-lanreate. On the whole, however, it is regarded seriously, and the Baltimore American thinks that "all will agree that it is about the best production, from a literary standpoint, that has yet come from the very independent Mr. Austin."

Failure of English Fiction in Germany.—Herr Lutz, a prominent Stuttgart publisher, has been attempting, during the last ten years, to introduce into Germany translations of several of the best-known English and American nowles, including Hawthorne's "Scarlet Letter," Blackmore's "Lorna Doone."

Barrie's "Window in Thrums," Mary E. Wilkins's "Short Stories," and Marie Corelli's "Romance of Two Worlds," His experience, as chronicled in Literature (December 28), has been the reverse of encouraging. Not a single one of these novels has sold to the extent of a thousand copies, the most of them have been well reviewed in the German literary journals, "From the financial point of view," says Herr Lutz, " the result is that I have just covered costs on two of the works. On most of them there has been a loss so far. I shall consider myself lucky if I make any money on any of them." The prices of the books range between two and three marks, and the best possible talent was secured in translating them. Herr Lutz, while deploring the indifference of the German reading public to "the finest Envlish novels," points out that even the most popular of German novels eujoy but a limited circulation. "The largest sale attained by a novel-Scheffel's 'Ekkehard '-in the course of the last fifty years," he observes, "reached 150,000 copies. Among new novels of the best authors an edition rarely reaches 10,000 in the course of the first and second years."

A correspondent writes to Literatus e January 3) suggesting that Hert Lutr's luck of success was largely due to his choice of novels. The books selected, he declares, are too reclolent of local color and appeal too little to the universal human interest; and he proposes as substrutes such novels as George Eliot's "Silas Warner," Meredith's "Ordeal of Richard Feverel," and Hardy's "Tess of the PUTbervilles." "If Hert Luts gives his countrymen another and better chance, but with no better results," says the writer, "then they will deserve indeed all the hard things he says of them, wherein they will, however, find themselves not one whit behind the public of any other country, except France."

#### THE NEW WEST AND THE OLD FICTION.

N OVELS about the West have been written by the hundred, but are they truly representative of Western life? Mr. William R. Lighton, who propounds this question in the Boston Transcript, answers it in the negative. It will avail nothing," he says, "to eite Bert Harte or Mark Twain or Owen Wister or any other name on the list, in refutation. Their work was true and vital enough in relation to the phases of life they sought to

portray; but those phases were transient, merely momentary." We quote further

FRANK NORRIS

tion—good literature, if you like that phrase, but mostly untrue, and therefore rubbish. The best of it is only as the first low footbills away below and out of sight of the mountains. Two books stand out above the rest out so much by reason of accomplishment as because of their indicating better tendencies. These are Francis Lynde's "The Helpers' and Frank Norris's "The Octopus,"

Mr. Arthur Chapman, literary editor of the Denver Repubtions, writes in similar velo in The Independent (January 4). He says:

"The books of the West deal with all those dear old lay figures

with which we have been familiar since infancy almost—the those opined cowloy, full of armape drinks and bearded like the pard; the 'bad man' of baleful eyes and quiet speech, and the same of the commercial commercial the miner's daughter, a monntain wild-flower sho stoys 'Dad' and who has never been to a matifie; and the the dol miner himself (bless him ), with a simpossible dialect, his red-flannel shirt open at the neck, his impossible dialect, his red-flannel shirt open at the neck his impossible dialect, his red-flannel shirt open at the neck his impossible dialect, his red-flannel shirt open at the neck his impossible dialect, his red-flannel shirt open at the neck his impossible dialect, his red-flannel shirt open at the neck his impossible dialect, his red-flannel shirt open at the neck his impossible dialect, his red-flannel shirt open at the neck, his impossible dialect, his red-flannel shirt open at the neck, his impossible dialect, his red-flannel shirt open at the neck, his impossible dialect, his red-flannel shirt open at the neck, his impossible dialect, his red-flannel shirt open at the neck, his impossible dialect, his red-flannel shirt open at the neck, his impossible dialect, his red-flannel shirt open at the neck, his impossible dialect, his red-flannel shirt open at the neck, his impossible dialect, his red-flannel shirt open at the neck, his impossible dialect, his red-flannel shirt open at the neck his impossible dialect, his red-flannel shirt open at the neck his red-flannel shirt open at t

"Any weekly report of Bradstreet or Dun shows that a revolution has taken place in the vast country that begins with the first up-grade after you leave Omaha. It shows that the Weshas grown out of its dialects, its red shirts, and its mountain primroses, and that its 'pants' are no longer tucked in its boots. It is a bisy, manufacturing, producing West. It even has its social circles, one of which is always designated as the swellest. It also has its golf-links, its create for grand opera, and its men who would rather be halted as charge for that any process. The product of the control of the control of the control of the between book covers, in spite of the fact that they are in the West, on both slopes of the divide from Canada to the Rio Grande?"

If latter-day miners and cowboys are to be described, they must be painted in their true colors, insists Mr. Chapman, even the they lose all their old-time picturesqueness and romance in the process. He concludes:

"Just why the real West is not exploited in fiction is one of those literary mysteries that may never be solved. But the actual conditions can not long remain 'undiscovered.' Some keeneyed genius, who recognizes the theatrical untruth of the accepted school, will each the interesting phases of actuality. Then we shall get some capital stories of the big mines with their complicated machinery and of the ranch, minus the cowboy and the romotiny. There will be stories of real mining-towns, without the stereotyped 'bad men,' and stories of the miningstock exchanges at Colorado Springs and Denver—places that do not lack the sectioners of the New York Stock Exchange or the Story of the Story of the New York Stock hashings to better sknown in oxitiations.

"These stories will not be the result of car-window observations or impressions gathered before the expiration of a Colorado summer excursion-ticket. The Indian will not figure in them any more than he figures in the streets of Denver—which is about once a year, when he comes to the Pestival of Mountain and Plain; and when he is regarded with greater 'curiosity and if he strolled down Broadway. The actual people of the West will be introduced in fistion, and the change from artificially or reality will be welcome, especially on the sun-down side of the Missouri River."

One recent novel of the West, mentioned above, namely, "The Octopus," by Frank Norris, has made a strong impression on English critics, several of them comparing the author, not untavorably, with Zola. The London Outlook's reviewer had this to say:

"With this book under his arm Mr. Norris has an excellent passport to I Pranssus. For his 'Cotopus' is, in requect of its aristic pattern or design, a long prose-poem of an interest intense and panfill, exalted by majestic philosophy. Percels it is in its essence, since, with all its dignified abstention from purenece, it reminds one of '1.a Terel and '1.a like il luminine." Ho this is cause for congratulation, the grandeur of Zola, resolutiin that external foreground to earth and bacegoon to back, is here in Mr. Frank Norris, here in his wheat-fields, as unany extracts might above."

The London Pilot says: "It is seething with life in irrepresible and antagonistic forms; life portrayed with perhaps chaotic but resistless power and with unsparing sincerity. In the bewildering complexity of this social study the author ranks himself with Zola, but in the 'milit'ing sense of nature's great generative forces with Walt Whitman. The 'leaves of grass' in this epic of the wheat have become individual and dramatic." Mr. Stead's Review of Reviews thinks the story "horrid," but of "extraorditiary power." It says:

"If you can imagine Æschylus sensationalized, and the Greek drama redressed as a modern novel, you can imagine something of the somber note which is audible on every page of this most depressing book."

#### JOHN BARRYMORE'S PICTURES.

TWO generations of the Barrymore family have been known to theatergoers as players of marked ability. Maurice Barrymore will be remembered, not only as an actor, but as the author of "Najesda," in which Modjeska starred successfully. The latest member of the family to make a bid for fame is Maurice Barrymore's son. John Barrymore, whose remarkable pictures are attracting considerable attention. Four examples of his art, which invite comparison with the weird creations of Autoine Wiertz, the Belgian painter, are given in the January Cosmopolitan. They bear the titles "Despair," "Unrest." "Jealousy," and "Fear," and two of them are reproduced herewith. "John Barrymore's work," declares Hjalmar 11. Boyesen, "is of interest not only because he has left the beaten paths, but also because he displays considerable power of thought and technique." Mr. Boyesen says further

"All of the emotions portrayed by Mr. Barrymore are the strong emotions of strong men. Take, for instance, his 'Fear,' The gaunt silent figure can have nothing to do with the fluttering heart of a child in the dark, or the cowardice which pockets gross insult, or the sudden impulse of a soldier to flee on his first smell of powder. This is rather 'where he stands, the Arch Fear in a visible form.' It is the fear which must be met face to face, such as one feels seated at the bedside of one's dearest

friend whose doom the doctor has whispered above the labored breathing; the fear of the end which seizes the man of ill-spent power. Tense, inevitable, awful Fear.

His pictures represent crises, finalities. The lonely figure on the promontory, stealthily approached by Unrest, is that of a

man who, good or bad, has lived according to his own clearly defined obstacle - overcoming plan. He has toiled up the steep, far from the crowd below him, to the ultimate point where Satisfaction is said to dwell, only to find Unrest pointing back over his path which it is now too late to retrace.

"His 'lealousy' is the insidious possessing force which tortures a man into doubting secretly the woman he has idealized and loved. It is not the power which prompts to

BORES BLANCKSONS reckless deeds or instant revenge of fancied wrongs. It taunts with helplessness,

inactivity, indecision, 'Despair,' too, is a crushing Titan in whose grasp the pigmy, man, is powerless."

"Mr. Barrymore's pictures," concludes the writer, "give great promise for his future. Perhaps when old age overtakes him he

will have shown us the awakened man, scorning the spirit of Unrest, uplifting the ideal shattered by Jealousy, throttling gigantic Despair, freed by time from the necessity of staring into the eves of Fear. Then only will his pictures reach true greatness, for they will carry the message of the real man's ability to hew his

try in New York and its vicinity. Many fine examples are in the ossession of Mr. Cornelius Vanderbilt, Mr. William C. Whitney, Mrs. C. P. Huntington, Mr. Arthur Kountze, Mr. Charles Alexander, and Colonel Payne. A series of twelve pieces, the molifs of which are scenes in the life of Christ, was presented to the Cathedral of St. John the Divine, on Morningside Heights, New York, by the late Mrs. William H. Cole. These were purchased out of the Barberini Palace, in Rome, together with 131 other pieces, which included the entire collection of the palace, with the exception of the family portraits. The fine specimens of Gobelin tapestry at the Metropolitan Museum of Art, mostly from the Duke of Hamilton's collection and from that of King Ludwig of Bavaria, also came to that institution through Mrs. Coles. Even with the present revival of approcuation, these tapestries now are valued at far less than is represented by the original cost of manufacture."

Probably the most famous of present-day tapestry establishments is the Beavavia manufactory, under French government control, and in its service are many of the Gobelin workmen. Generally speaking, orders are executed only for the crowned heads, altho exceptions to this rule are sometimes made. Payment is, however, demanded before the execution of the order, and it sometimes happens that from one to five years are required in which to execute such an order. The French Government now has enough tapestry to line a street ten miles long.

#### WHY HAVE WE NO SATIRE?

In the history of literature no unimportant part has been played by satirical writing. Swift's "Tale of a Tub" and "Gulliver's Travels." Thackerays's and Dickera's social satires, and the biting tronics of Voltatic and Heine—to mention no more—all exerted a potent influence upon the age in which they were created. Nowadays, however, we seem to be in danger of permitting satire to sink into the oblivion of the lost arts. Says Mr. Jannes L. Ford (in Success, January):

"It is a curious fact that, in an era which has at least produced a greater number of writers than any other in our country's history, there is scarcely a satirist worthy of the name to be found. Of story-writers and novelists we have plenty, and we can least of some humorists of distinctive individuality; but, with the exception of 'Mr. Dooley,' there is certainly not a high-class political satirist in the field, while the clumsy attempts to saturize literature, swietly, and some of our other pet institutions, that meet our unwilling gaze from time to time, awaken pity rather than laughter.

"This, in a country whose humor holds a high trank in comparison with that of other nations! It was not always so. Benjamin Frunklin made his mark as a satirist before the republic was born, and, in the early part of the century, every Presidential administration served to quicken into life some new satirical pen. Who, I should like to know, will live in history as the satirist of any) of our Presidents since Frunklin's time? I do not receil, at this mement, any great work of political scitic since receil, at the ament, any great work of political scitic since when the satirity of the present the satirity of the satirity when the satirity of the present the satirity of the

#### Bug John P. Robinson, he Says they didn't know everything down in Judee.

"The Revolution begot the 'Junius Letters'; the War of \$iz\$ made Seba Smith a saturst, and the Mexican War prompted some of Lowell's finest sarcasm. The Civil War, it is true, brought forth a short-lived race of satiritian vibres, and among these were 'Ivtroleum V. Nasby,' Q. K. Philander Doesticks, and 'Oppleas C. Kerr.' The last named derived his most deal of the state of the civil war, and which has not entirely failed from sicht in subsequent vers.

"In recent years, but one important school of satirical writing has flourished in America, for our professelly comic journals have developed humorists of an entirely different sort. During the life of Charles A. Dana, the New York Sun produced a race of satirists who wrote, for the most part, anonymously, and frequently their work, altho necessarily ephemeral, possessed the highest satirical value."

The dearth of satire can not be due to a lack of suitable material, maintains the writer, since present social and political conditions furnish "the richest field that the world has known succeeding the properties of the propert

"There are several reasons for the scarcity of satirists at the present moment. To begin with, the American public does not take kindly to satire, and the magazine age of letters has shaped writers of an entirely different class. Moreover, no satirist can go about his work with any real confidence in his ultimate success, if the realizes how few people there are who possess a laguation sense of humor. At the present day, fully nime-tenths of the reading population of this country are as impervious to fine statire as is the proverbial duck's back to a rainfall. It is for this reason that some of the most preposterous fuses, "that the world at their proposterous fuses," that the world has ever seen find it an easy matter to palm themselves off on the world at their convenience.

"The cartoon flourishes, however; and, altho we can not boast of a Hogarth, we have a number of satirists of the pencil, whose work is so broad that even the simplest mind can not fail to grasp its significance."

#### A SOUTHERN PROTEST AGAINST "UNCLE TOM'S CABIN."

The protest of the Daughters of the Confederacy at Lexington, Ky., against further performances of "Uncle Tom's Cabin" in their town has created both surprise and amusement. "This good old drama of our childhood days," remarks the

"PORK UNCL' TOM."

He finds Lexington, Ky., worse than Simon Legree.

- The Kansas City Journal.

destined to become immortal, not so much through the efforts of its friends as the assaults of those who object to it. F. Hopkinson's attack upon it gave it quite a boom, but the effect had nearly died away when the ladies of Lexington, Ky., came forward and gave it a fresh start." Says the Chicago Post .

Brooklyn Stand-

ard Prior "spoms

-The Kausat City Inernal. "As the result of
the free advertising which the good women of the blue-grass State have given
the play, a dozen new Uncle Tom companies are reported to be
forming throughout the country—two of them right in Kentucky
inself—and we may look for a 'revival' which will outrival the
"all-star aggregation" which toured the country last spring."

The Kausas City Journal takes a more serious view of the subject, and thinks that the Lexington women's feeling that "the pluy gives wrong impressions to their children in regard to the character of their forefathers" is justified. The manager of the born lopera-house replied to his critica as follows:

"Ladies: A copy of your resolution in reference to 'Uncle Tom's Cabin' has been received. Replying to the same, I have only to say the war has been over about thirty-six years. Yours, etc., Charles Scott."

#### SCIENCE AND INVENTION.

# CLARENCE KING AND THE GREAT DIAMOND SWINDLE.

CLARENCE KING, first director of the United States Gelorical Survey, died in Phoenix, Arizona, on December 24 last. From an obituary notice by Dr. Marcus Benjamin in The Scientific American (January 11), it is learned that he was born in Newport, R. 1., January 6, 1842, graduated from Yale (Shefield Scientific School) in 1862, and at once began the work of

CLARENCE KING,

exploration and survey in which he made his reputation. While with the California State Survey. he discovered and named Mounts Whitney and Tyndall. From 1867 till 1872 he was in charge of the Government Geological Survey of the fortieth parallel, and in 1878, on the consolidation of the various government surveys into the United States Geologica! Survey, he became director of the combined work; but after organizing

the new survey, appointing the staff and guiding it into full activity, he resigned in 1881 to devote himself to special geological investigation. In recent years his lealth failed and he was an invalid for several years before his death. A somewhat sensational event of Mr. King's career was his discovery of the grave Wyoming diamond swindle late in 1872. This is thus related by Dr. Benjamin.

"Early in 1872 much attention was called in this country and ia Europe to the alleged discovery, somewhere in the far West, of new diamond-fields of unparalleled richness. Large quantities of precious stones had been brought thence and judged by experts to have great value. Reports which received the confidence of capitalists were made in New York and Sau Francisco, setting forth the great importance of the new find, and resulting in the formation of several companies to exploit the field. As it afterward appeared, many thousands of dollars' worth of rough diamonds, rubies, emeralds, and other gems had been purchased in London, brought to the chosen locality, and sown with a free hand on the ground or carefully stuck into aut-hills. Much excitement prevailed, and there can be but little doubt that, if the swindle had remained unexposed for a short while longer, there would have been a rush to the supposed sources of wealth like that which followed the discovery of gold in California. The precise locality was kept secret for some months, and the impression prevailed that the diamond-fields were in Arizona. The discovery that they were within the official limits of the Fortieth Parallel Survey was fortunately made by one of Mr. King's staff, and he immediately set out for the designated locality. The swindle had been skilfully prepared, even to the choice of a locality geologically favorable, and the 'salting' had been so cunningly and artfully done that it had already deceived honest experts of much experience; but on the second day after his arrival Mr. King's suspicions were aroused, and he at once began a series of careful observations from which it clearly appeared that the gems were found in positions where nature alone could never have placed them, and were not to be found in places where, had the occurrence been genuine, the inevitable laws of nature must have carried them; that near every antihil found to coataia gems might still be seen the storm-worn footprints of nankind, while antihills free from human tracks were also void of precious stones; and, finally and unquestionably, that some designing hand had 'saited' the fields with deliberate and fraudulent intent. The public announcement of this result was followed by the immediate bursting of the bubble; but had this been delayed only a little while, it is certain that great disappoiatment, distress, and loss of moacy would have been suffered by many victions of the fraud.

#### LIQUID FUEL AT SEA.

THE use of oil as fuel on steamers is increasing in Great
Britain. According to Marine Engineering (January),
which prints some facts on this subject, one of the greatest obstacles to be overcome in fitting old steamers with oil burning
appliances is in making suitable oil-tight tunks. Coal-bunkers are
too light, and the rivering is not oil-tight, while the ballast tanks
at the ends and in the double bottom will not do because of the
water that might leak in. Says the paper named above:

"With former systems means have not been used to separate the oil from the water, and a small percentage of water in the fuel causes the flame at the hurners to sputter and go out, frequently resulting in an explosion upon relighting."

In a new patent system generally employed in Bagland, water separation is accomplished by using two liquid-fuel settlingtaaks of large enpacity and with special arrangements placed amidships immediately adjacent to the boiler-room bulkhead. To quote ragain.

"These tanks are fitted with all the necessary heating-coils, draining arrangements, thermometers, glass indicators, and other fittings, to enable the liquid fuel to be heated to a sufficient temperature to allow the water being freely separated. Any water which may settle in the bottom of the tanks can at once be draiged off. Each tank is made of sufficient size to contain half a day's supply of liquid fuel, so that while the liquid fuel is being used to supply the burners from one tank, the water is being separated in the other. The settling-tanks can be filled either direct from the deck or the forward liquid-fuel carrying spaces by means of a pump placed in the forward end of the vessel, or from the after-ballast tanks or cofferdam, by means of two special pumps placed in the stoke-hole. The liquid fuel gravitates from the settling-tanks through suitable filtering arrangements, which form an important point in the system, direct to the burners, and is there injected into the furnaces with a spray of steam. Each furnace is fitted with two burners. The furnace arrangemeats are such that the complete coal-burning gear remains intact, so that either coal or liquid fuel may be resorted to at will. If the vessel is burning liquid fuel, and it is found necessary from economical reasons to resort to coal-burning, then it is only necessary to rake some broken fire-bricks from off the fire-bars, disconnect the burners, and light a coal fire."

One English company, we are told, has fitted no less than fifty vessels with oil-burning apparatus and is now equipping eight more.

Microbos and Motors.—The idea of microbos as a source of motive power appears in first sight preposetrous, says the London Lancet (Jasury 4), but "a little reflection will show that indirectly even for this purpose micro-organisms may be very intimately concerned." It proceeds to develop the idea as follows:

"It is well known that if it were not for its powerful action as a drug and poison alcohol would be a cheap commodity. Sugars and starches grow in immense abundance in almost all the civilized countries in the world, and it is but a short step to contribute these into alcohol by fermentation, a process due to the agency of micro-organisms. All creates would thus serve, and the root-containing sugar, such as the maple, and even fruit such as the grape, in a time of plenty might easily be a cheap source of

spirit. Alcohol possesses excellent calorific value, it burns with a hot flame, it is easily vaporized, and it yields, as a rule, no deleterious products of partial combustion as does oil or coal. It is thus well adapted as a fuel for the motor-car, and already motor-cars are being run with alcohol and with very eucouraging results. The drawback to its use is, of course, its expense, but some effort to reduce this has been made with success by getting a concession from the Excise (at any rate, in France) to withdraw the high duty, which is done if it can be shown that the spirit has been rendered undrinkable. Such alcohol is known as 'denatured ' spirit, the addition of some highly nauseous compound making it absolutely unfit to drink whilst not interfering with its properties for the purposes of a fuel. Similarly denatured alcohol is being employed in lamps for the production of an incandescent light by the heating of the Welsbach mantle in the spirit flame. It is, therefore, not chimerical entirely to suggest that the day may come when we may not only owe our increased facilities of locomotion to the much-abused microbe, but some of our effectual means of artificial illumination also

#### TO NATURE BY TROLLEY.

THAT the trolley has done more to "bring man back to nature" than any other modern agency, and that those who object to its presence in regions hitherto secluded know not of what they speak, is the assertion of The Street Railway Journal (November 50). This statement was prompted by an editorial from the Buffalo Commercial, objecting to a proposed trolley road in the Adirondacks. Sad The Commercial:

"The Adirondacks have some merits as a wilderness, but there are strangley constituted persons who will never rest content until the North Woods are furnished with all the modern conveniences, neulcular street railways, electric lights, asphalt pavements, and afternoon concerts. A trolley live from Lake Champlain to Lake Placid is already projected, the rest will follow. The deer and the guides will slowly retreat before the march of civilization, and soon will take their places with the stage-drivers of the old school, among the "figures of the past." That is to say, such will be the inevitable end of the present tendencies, asy, such will be the inevitable end of the present tendencies. Adirondack region is made too eastly accessible to the casual tourist, the wilderness passes into history."

#### On this the journal first mentioned comments as follows.

"The preservation of the beauties of nature is a matter to the importance of which the public is far more alive than it was a century ago, but it seems to us that some of those who declaim against the invasion of the trolley do protest too much. . . It would indeed be a pity to spoil or despoil the Adironacks, but the would indeed lee a pity to spoil or despoil the Adironacks, that the would indeed the a pity to spoil or despoil the Adironacks, that the would indeed the steam railroad, the tornist and, the tornist and the temperature as at the other temperature as the core reason why the editor of the Buffalo Commercial cannot have the wilderness all to himself while he communes with nature.

"Probably the trolley less than any other transportation agency leaves any trace of its presence on the country it traverses, whether as to noise or dust or smoke, or the setting on fire of the contiguous shrubbery. The same objections have been raised to the electric railroads up the Swiss and Tyrolean Alps, yet it takes a keen eye to detect from a distance the electric cars that climb from the valley of the Arve or those that wind around the Wengern Alps up the slopes of the Jungfrau. There are many thousands of quiet, cultivated, nature-loving people who could never tread the higher Alps or penetrate the Adirondack woods but for the modern conveniences of travel; and we really do not see why their love of nature and desire for a more intimate relation with it is not as properly to be gratified as the ambitions of some mere deerslayer or well-to-do misanthropic tramp, with hobnail boots and an alpenstock. There is solitude enough left in the world for all who want it. All they have to do is to go a little farther afield; to plunge a little deeper into the woods. Meantime, the ugly, unesthetic trolley has done more than any other known agency to take man back to nature, to put the country at the very door of the dweller in the city, and to enable every one who will to dwell under his own vine and fig-tree."

#### BRIDGES VERSUS TUNNELS.

THE announcement of the Pennsylvania Railroad that it will construct tunnels under the North and East Rivers to provide a terminus in New York City for its lines in New Jersey and Long Island, brings the tunnel again fine prominence as a means of crossing bodies of water. Attempts to tunnel under the Hudson River at New York have so often failed that a huge bridge has come to be the accepted solution of the long-standing problem of a Mahattan terminus for the New Jersey roads. This problem will be solved for one road only by the Pennsylvania tunnel, but if its tunnel is built the proposed bridge will probably never be crected. Says The Scientifis. American in discussing the subject editorially.

"There is to-day a growing tendency in all the great centers of population to place the means of transportation underground, and this for the very good reason that there is no further room for them above ground. In an earlier day it was customary to build rapid-transit systems, and the approaches of trunk railroads in the great cities, on elevated structures: but the growing congestion of street traffic, velneular and pedestrain, has brought us to a time when the piers and articles of steel or stone valutious are no longer a permissible obstruction, to say nothing of objections on the score of the obstructures and the score of the obstructures. Here on the score of the obstructures of the obstructures. In the complex of the obstructure of the obstructure.

"To the engineer, and, indeed, to all of us who are attracted by engineering works of great latning and magnitude, it will be something of a disappointment that the proposed Husbon River bridge, with its vast 3,005-600 span and its towers reaching five hundred feet into the air, will not be built; but now that a great railroad company like the Pennsylvania has opiny declared in favor of tunnels as the best method of serving New York with due regard to its own interest and the convenience of the city insoft, we may take it for granted that the Hudson River bridge will never be built."

In justice to the proposed bridge, however, the writer calls attention to the erroneousness of the popular impression that a bridge would be far more costly than tunnels. The proposed two-tunnel scheme will cost far less than the proposed bridge two-tunnel scheme would one-statia as great. Hence the proper basis of comparison would be that of twelve 18-foot tunnels against one bridge; and probably the latter would be cheaper to countruct. As it is exposed to the elements, however, it would be more expensive to keep in repair and it would involve the erection of a vast viaduct and surface station that would seriously encumber the streets. Thus, as the writer says in conclusion: "The feature that will, more than any other, commend this tunnel scheme to our municipal authorities and to the people of New York is that it will be absolutely unobtrusive."

Function of Green and Blue Coloration in Animals.—An interesting investigation by two French biologists has brought out the fact that in creatures with blue or green skins, such as frogs, lizards, and various follers, these colors are protective; not in the ordinary sense, but physically, since they sift out the light rays that may be hurtful to the organism. Says Crums, in a brief note on the matter (November 30):

"We find numerous examples of green and blue coloration in vertebrates, either extending over the whole surface of the body as in the green frog, blue brand, etc., or localized in spots, as in the mackerel. These colors have the peculiarity that they are not due to a special pigment that gives its own late to the skin, but to quite a different physical phenomenon. All blue skins contain only a black pigment. Green skins have two pigments, a black and a yellow. Messrs, Camichel and Mandoul have been investigating the means by which a black pigment can give rise to a blue coloration. Pouchet, who studied these colorations, referred them to fluorescence. The obscure ultra-violet rays, according to this author, are reflected, resarded, and rendered visible. By reason of the frequency of the phenomenon and its independence of all definite auatomical structure, Pouchet called it 'cerulescence,' Observations made by the authors show that these skins have the same properties as those of artificial turbid media, such as smoke and india-ink. Like these media, blue and green skins have in general the property of being reddish by transmitted and bluish by diffused light, and they consist of pigmentary granulations whose dimensions are of the same order of magnitude as the wave-length of light. The blue or green coloration causes absorption of the red calorific radiations, which are useful to the organism, while the violet and ultra-violet radiations, which are hurtful to the organism, as they cause solar crythema, variola, etc., are rejected. The skin thus acts as a sort of sieve, permeable to useful rays and impermeable to hurtful ones. The blue and green colorations constitute a state of defense, on the part of the organism, against hurtful radiations."- Franslations made for THE LITERARY DIGEST.

# AUTOMATIC CLOSING OF WATER-TIGHT

THERE is so much difficulty in making sure that doors in water-tight builkheads will be promptly closed in case of collision between vessels at sea that the safety assured by such builcheads has become somewhat doubtful. Much attention has been given of late to this matter, which involves the preservation of so many auman lives, and it is believed that in the hydraulic system just installed on the steamer Krouprius Villeties the problem has been as nearly solved as possible. The Scientific Junction (January 11) has the following to say editorially about this system and its precursors:

Altho theoretically there is a large degree of safety secured by the complete subdivision of the interior of modern steamships by means of water-tight bulkheads, the too frequent failure of this system to keep vessels afloat after collision would seem to suggest that the advantages are more theoretical than real. As a matter of fact, it will be found on investigation that where a well-divided ship has foundered the fault has been not in the system of subdivision so much as in the many perforations of the water-tight bulkhead by doorways and passageways below the water-line. Altho such openings are supposed to be guarded by water-tight doors, it is evident that the value of the subdivision is finally and absolutely dependent upon the efficient oversight of these doors and the care that is taken to close them in the event of collision. Many naval architects have endeavored to overcome the difficulty by absolutely prohibiting the construction of water-tight doors below the waterline; but this arrangement involves great inconvenience, especially in passenger-ships. as all communication from compartment to compartment necessitates climbing to the upper deck and descending into the desired section of the ship. The compromise which seems best to meet all the conditions is that which permits of a certain number of water-tight doors below the water-line, and the installation of a system by which they can all be automatically and simultaneously closed from a central station in case of collision. One of the most successful systems of this kind is that which has been installed on the Kronprinz Withelm, which is known as the Dorr hydraulic water-tight system. The central station is located on the bridge, and in the event of collision the officer first moves over a lever, which sets an electric bell ringing for twenty seconds at every bulkhead door. At the end of that period the lever releases the throttle wheel for starting the hydraulic closing cylinders, on turning which the doors are released and closed. When the door reaches the bottom of its scating it closes an electric circuit, and a corresponding glow-lamp in a plan of the bulkheads in the pilot-house is illuminated. The system appears to be thoroughly satisfactory, and is being applied to every vessel in the company's fleet."

Electricity and the Nerves.—Speaking of the new theory of nerve action, recently described in these columns, The Electrical World says (January 4).

"It may be remarked that, so far as the alleged discovery re-

lates to electricity, it rests upon a rather slender foundation. The ionic theory is so far from being established that it may be considered not much more than a working hypothesis, and the Chicago professors appear even to have taken unwarranted liberties with the hypothesis in their assumption as to charges rotating about atoms at different rates, of 'oue-charged' and multiple charged ions, and, in general, in assuming the existence of a definite noine incenhanism. Dr. H. P. Pratt, be 1-ray expert, confirms the discovery, however, but claims that he also had been working along the same lines. Dr. Pratt further believes that the twentreth century will prove that electricity and not sodium is the real life-giving principle.

Professor Mathews, who has been generally credited with the new theory, writes to the daily press to disclaim its authorship, which he gives to his colleague, Prof. Jacques Loeb. His own work, he says, has been strictly auxiliary to Professor Loeb's discovery.

An Artificial Larynx,-"A marvel of surgery was exhibited at the recent surgical conference at Lyons, France," says the Courier d'Etats Unis (New York), "in the person of a young man whose larvnx had been removed and replaced by an artificial one of hard rubber. The natural glottis and vocal cords are replaced by a thin rubber diaphragm with a slit in it. As the size and tension of this diaphragm are always the same, it can vibrate in only one way and produce but a single note. The mau's voice, therefore, never varies in pitch, and is much like the voice of Mr. Punch: but as the modifications of the voice which produce vowels and consonants are due to motions of the palate, tongue, and teeth, which parts remain intact, the subject can speak distinctly, the always in the same tone. Above the rubber larynx is a metal sieve, which prevents the entrance of solid food into the larvax and breathing-tubes. Liquids which trickle in are led away by a tube connecting the rubber larynx with the csophagus or gullet. There is still another tube which comes out in the front of the neck. This enables the subject to breathe more freely than he could do through his artificial glottis and gives this a rest. When he wishes to speak, he stops the hole in his neck with his finger."-Translation made for Tue LITERARY DIGEST.

#### SCIENCE BREVITIES.

That rays given of by radiom and similar substances, which are as similar to cavar in their action, have been shown by Bertholt and Becquered in France, in recent reports to the Academy of Actiness natived in Face property. Their effect on soin protocol and on nitric and resembles that of ordinary light, but various chemical actions that are produced by light activities of the soin of the soin protocol and on their and for examinating actions that are produced by light arrange choicing action on giasa, portealin, paper, and fock-sait, with their destructive effect on the skin is very noticeable. Seeds apposed to then are radiation will not germinate, we imprison as its effect on organic

It a recent issue of The Journal of the Worcenter Polyrecholic Institute C. M. Allen describes how the stammengies indicator may be made to record the work down by an earsman in a boat. "The boat to which the record the work down by an earsman fin a boat." The boat to which the expanse of levers, the end of which that do bearing upon the pixton of a Croaby indicator. The drum of the indicator was driven by the reduced believed to the control of the ear. While such an arrangement on each side of partition the oar at each pointed the stroke; to measure with great accuracy the easts tength of the stroke; to measure with great accuracy the easts tength of the stroke, and from an examination of the curve to determine the proper location of the foot-reast and the rowlock relatively determine the proper location of the foot-reast and the rowlock relatively in the rech."

"THE close attention which the Emperor of Germany gives to scientific and technical subjects, and the personal interest he takes in the work of men who study them, have been shown on many occasions," says Nature. The latest instance occurred when, attended by a large payal staff, he was present at the annual general meeting of the Society of Navai Architects. . . . The Times correspondent at Berlin states that the chief item in the program was a lecture by Gebeimrath Brinkmann on the changes which have been adopted in the disposition of guns in hattle-ships and the results of these changes upon naval architecture. . . To the surprise of the audience, the Emperor ascended the platform, and, after, beckoning all who were present to remain seated, spoke upon the subject of the influences of military requirements upon the development of naval construction and the disposition of artillery on ships. The presence of the Emperor at scientific and technical meetings is itself a mark of sympathy with their aime; and when, in addition, he shows himself keenly interested in the subjects discussed, the influence upon the public mind must be very great. To this influence must partly be ascribed the regard in which scientific investigation is held in Germany."

## THE RELIGIOUS WORLD.

#### WHAT IS TO BE THE UNIVERSAL RELIGION?

THIS question is tersely discussed by the Rev. David I lownie, D.D., for many years an honored missionary of the American Baptist Missionary Union. According to this view, the milleunium is not by any means so near as many suppose. He writes as follows in The Happist Missionary Review (August), published at Madray, India.

"Christianity is a unssionary religion, but so are Mohammedanism and Buddhism. All other religions are ethnic or race religions, hence are not in the context for the supremacy of the world. We believe that Christianity will finally triumph, but before it does there will come a mighty struggle, and there are indications tin the twentieth century will see it. I have an indication tin the twentieth century will see it. I have an every important part in that conflict, and may even be the center of the struggle. My seasons for this opinion will appear when we consider the geographical position of India as related to the chief centers of the respective religions."

In estimating the strength of the contending parties, Dr. Downie credits Buddhism with a host of 50,000,000 and alterents, which manifest a missionary spirit. But he does not regard the most fininterious as the most formidable of the tirals of Christianity. "Mohammedanism," he says, "with less than half the number, is much more to be feared, being much more aggressive. Of the 175,000,000 of Mohammedanis, India alone contains one-third, or about 60,000,000. Central Asia, Persia, Arabia, Syria, Palestine, European Turkey, and a large part of Africa are almost wholly Mohammedan."

The writer then dissents from the position usually taken by the opponents of Mohammedanism, who generally claim that its success has been due primarily to the force of arms.

"Altho the sworpl of Islam is broken and its political power is fading, yet as a religion it shows little disposition to relinquish its claim to the supremery of the world, and in many parts is making a determined effort to make good the claim. Perhaps it is sufficient to say in proof of this statement that we have to-day a Mohammedan propaganda in America with 1,000 converts in a single city, and 2,000 more in other cities."

In urging the conquest of India by Christianity as a strategic point, Dr. Downie proposes to fight it out on three lines:

"(1) First and chief is a strong reinforcement of evangelistic missionance, several of whom should be especially fitted and example missionance, several of whom should be especially fitted and apart for work among the higher and educated classes. (2) Christian education coght to be strengthened and vestended. A merger especially expressed in the expression of the several education may deprive a Hindu of his religion, but it is gives him nothing in its place. That is hardly fair, for extrapression is better than none. Christian education also destroys Hindusenia, but it substitutes what is indefinitely better. (5) A Christian literature. . . . These educated men and women of India will read almost anything, especially if it be in English. . . . . If by these means India can be won for Christ, we shall then at least have the decided advantage of holding the stronger est positions, with America and Europe at the extremes, and India in the center."

Dr. Downie also takes occasion to refute the expressions met with in America regarding "the misrule of Britain in India," He says:

"I have lived in India for more than twenty-seven years, and I esteme it a duty as well as a privilege to bear testimony against these false accusations. . . . In the sirst place, it has put a stop to the frequent invasions of foreign tribs, to which India was subject before the British came. She has also put a stop to intestine wars, and has given the country peace. She has encouraged the development of the country, and has fostered industries. She has constructed railroads and canals, and has developed commerce. She has established a magnificent postal and telegraph system. She has also ished the arbitrary rule of the native princes, for the most part, and has given the country a government by law. But perhaps the greatest of all liftiant's beuefits to India is the excellent system of public education by which the powers native may qualify himself for public lift can usefulness. There are some 150,000 institutions of learning in India, with \$5,00,000 students, \$40,000 of whom are females. There are five great universities turning out 10,000 graduates every year."

#### A BRITISH STATESMAN'S PLEA FOR RELIGION.

ONE of the most remarkable addresses which has lately been delivered by a great stateman was given by Mr. Arthur J. Baffour before the Church of Sovitand Hone Misson and Church Extension Society in Glasgow a few weeks ago. The plea which he made racording to a report of the address which anguests in the New York Observer. December 26 was for an appears in the New York Observer.

THE RIGHT HON, ARTHUR J. BALFOCK.

ampler provision of religious opportuuities for the growing population of large cities, and especially for the insistence upon a religious faith as the necessary foundation of all philanthropic and altruistic endeavors. During the past century, he said, a revolution had taken place which had no parallel in the recorded traditions of mankind, and it was impossible that such a change should not carry with it the need and necessity,

not of any change in Christian doctrine, not of any change in religion, but of a change in the setting in which religion was to be presented to the people. There was a danger that had to be faced which could not be measured by mere statistics. Persons passed from religion to irreligion without any public or domestic revolution; they simply said to themselves that the Christian religion had probably been a such instrument of enlightenment and progress in times gone by, but it depended on a view of the world which scence had rejected. They did not wish to give it up, but housety required them to do so if they had to choose between science and religion; and so they left, almost insensibly, the faith of their fathers. Mr. Ralform continued

"Such persons are misled not as to the substance or essence of religion, but by the missaken statements of those whose business it was to teach it, and for that state of things the preaching of numriting was no remedy. There were those who had taken refuge from the difficulties of positive religions teaching in what hey impropely considered the safe ground of ethical mortalzing. That was not the business of the Christian charter. Any church which deregated from its great mission was destined to make its noradizing barren and useless. Morality was no substitute for religion, and any organized body which in a rash moment thought that that was apparently the causer path to choose was destined to find a very rude awakening."

Some thought that the days when religion was a necessity of a civilized community had passed away, or was in process of passing away. Mr. Balfour held that the growth of science and the enormous augmentation of knowledge, so far from rendering religion less necessary, made the duties of the church doubly imporative. He concluded:

"The leaven of religious life had been one of the most promipent characteristics of the Scottish people for three centuries. and were they going to allow that great heritage to diminish and fade away? Should they have to admit at the end of their lives that they left Scotland less religious than they found it, that that great element of national well-being and of spiritual excellence had diminished and waned under the light of modern civilization aud of modern education? He trusted not, he prayed not, nor did he think that they ought to have any misgiving or deepseated misgiving on that subject. If they responded to his anpeal and put upon a solid basis those great efforts to spread religion, not merely among the wealthy or the specially respectable or the specially educated, but among every class in every street and alley and backyard of our great cities, then not merely the Church of Scotland, but he trusted the cause-the cause of enlightenment and progress and true religion-would have great reason to be grateful for the efforts which they that day made."

Mr. Balfour's point of view is still further elaborated in his well-known book, "The Foundations of Belief," which has recently appeared in its eighth edition, with a new introduction and summary, and to which considerable space in the English reviews is again being given. "A statesman's leisure," remarks Literature, "could not be better spent than in writing a book like the "Foundations of Belsef"; and we are hearityl glod that it still enjoys a popularity which enables it to be republished at a popular price." The Spectator considers Mr. Balfour's book "a lotty, disinterested, and forcible attempt to contribute something to the solution of the eternal riddle, to discover and support the truth in matters most vital, if anything is vital, to the happiness of man as a thinking being." It summarizes the argument of Mr. Balfour's book as follows (December 2):

"As intelligent beings, we believe the world to be intelligible, or we certainly treat it as such, and try to understand it. But if we confine ourselves merely to what we perceive by the senses, mediately or immediately, we soon come to the end of our tether. and are landed in hopcless perplexities. On the other hand, there always have been among mankind theological beliefs of some sort, and a theological view of the universe; and science, ethics, and esthetics are all more intelligible when framed in a theological than when framed in a merely naturalistic setting, Again, all systems attach a certain sanctity to the results alike of science and of ethics. Truth is truth, and right is right, they all say, and with almost equal conviction and emphasis. But this conviction and this emphasis are irrational if the causes of these results, however far remote, are merely blind mechanical matter and force. Their very solemnity points to a different origin. The ordinary arguments should be inverted. Instead of saying the Commandments or the creeds are binding because they are divine, we must say they are surely divine because they are recognized as binding. Some, indeed, may not heed either their value or their origin, but so to disregard them is to give up knowledge altogether and to live in a world of shadows, related to each other only as events succeeding each other in time, casnal and incoherent.

An interesting and incisive criticism of Mr. Balfour's religious convictions, as expressed in his Glasgow address, appears in The Literary Guide and Rationalist Review (London, Bevember). "The author of 'A Defense of Philosophic Doubt," declares the writer of this article, "must surely have felt a littue uncomfortable in urging the claims of a system which implies that doubt, philosophic or otherwise, is a deadly sin. Has Mr. Balfour repented of his earlier indiscretious, or does he plead for religion in a sense that would be rejected by the church which availed herself of his eloquence?" The writer says further:

"So strangely does Mr. Balfour read the signs of the times that he considers the revolution which has been going on these hundred years past does not carry with it the necessity for any change in Christian doctrine"; it merely necessitates a 'change in the setting in which religion was from age to age presented to the people. This enigmatical utterance implies that theological doctrines form up part of the 'setting' of religion, tho we should have thought otherwise. Doctrine is an attempt to formulate intellectually a sentiment which is too vague to be capressed to not too vague to be obscured. What fresh 'setting' is required to reestablish the authority of religion the speaker did not explain, and it is difficult to gather from his words whether he himself had any distinct idea of its nature. To us it is clear that as long as the Christian ethic is based non a supernatural element which is not merely unvertibable, but so improbable as to be hopelessly discredited, its moral appeal will lack the vigorous ring of right reason.

"Mr. Balfour's speech is virtually a confession that the church has failed in the mission. It has done so because it has worked on lines which Mr. Balfour, apparently even now, can not perceive to have been wrong. It has incubated dogma where it should have enforced righteousness. Who can tell how different the history of the worlf would have been if a lofty moral aim had throughout been the consistent and paramount purpose of the state of the control of the state of the control of the state of

#### SHOULD PASTORS WRITE NOVELS?

THE Rev. James M. Ludlow, D.D., the author of several novels, the latest of which, entitled "Deborah," is a tale of Maccabean times, has been severely criticized by a member of his church (the Munn Avenue Presbyterian Church at East Orange, N. J.) on the ground that he neglected his duties as pastor in order that he might write novels. Dr. Ludlow in reply stated that he never allows his work as an author to interfere with his duties as a minister, doing his literary work chiefly in his vacations. Little importance is attached to the incident, but it has served to bring up the broader question concerning the proper relation of the pastor to literary work, and considerable interest is lent to this question by the increasing number of books that are being published from the pens of clergymen. In the Presbyterian denomination alone may be mentioned Dr. Henry Van Dyke, the Rev. Charles W. Gordon ("Ralph Connor"), and Dr. Charles Frederick Goss, The Church Economist (New York, January) has collected a group of opinions from representative clergymen on the question of the propriety of settled pastors engaging in outside literary work. The most concise and vigorous statement is that of Prof. Henry Van Dyke, who says: "So long as Dr. Ludlow does his church work well, as he does, what use he makes of the rest of his time is his own business. It lies between him and his Master. Much better write books than dally at tea-parties and dawdle at talking-matches." Dr. Louis Albert Banks, pastor of Grace Methodist Church, New York, author of no less than thirty-six books, confesses that he "hardly dares to express an opinion," but declares that, in his opinion, a pastor is entirely justified in taking time for literary work, and that "the amount of work a man should do is entirely fixed by the amount of his vital strength." Dr. S. P. Cadman thinks there are two sides to this question. By outside work, if not too much indulged in, a paster may strengthen himself so that he does better work for his own people. On the other hand, there have been "many notorious examples" of men who went too far, -"some noted men in the lecture-field who, while living, had strong church organizations, but upon whose deaths the churches fell immediately to pieces." Dr. Robert S. MacArthur contends that the pastor himself is his own judge as to the best manner in which to spend his time. He says.

"It ought to be borne in mind that the publication of newspaper articles, volumes, and the delivery of sermons and lectures bring large numbers of men and women to an author's church when they visit the city in which he preaches. If God gives a pastor remarkable power as the author of historic novels, as he has given Dr. Ludlow, the possession of that power is the divine call to its use in that department of historic inquiry. The same remark will apply to men who have the ear of the public as writers for the newspapers, or as lecturers and preachers to Chautauqua and other great audiences.

"To his own Master each pastor must give account for his use of all his time and all his talents."

# JEWISH COMMENT ON THE ZIONIST CONGRESS.

THE Zionist ideal may be a dream, impossible of realization, but it has done more to kindle the flame of altruistic and idealistic feeling in the Jewish race than has any movement in modern times. Such is the tone of the cumment on the recent

THIS VEAR'S ZIGNIST POST-CARD.

Zionist congress that finds expression in the mnjority of the Jewish papers. "Dr. Heral and his devoted band," remarks The Jervist Japonart (Philadelphia), "have accomplished accomplished exposure to promote the solidarity of Israel in five short years than their predecessors accomplished in many centuries"; and The Jewish American (Detroit), an anti-Zionist papers, says.

"Zimism is the one force that has put a purpose into the lives of those millions of our corelighmists whose very sonils have encrushed by the persecutions under which they have soffered in the hotbels of tyrampy that they call their homes. It has a kened in their breasts something of the hope and the idealism that the words of the prophets aroused in the hearts of exited hated in the ancient days. And that is enough to justify the existence of the movement."

The report of the Fifth Zionist Congress, held in Basle, Switzerland, from December 26 to 30, is printed in full in The Jewish

Chronicle (London, January 3), and makes quite a remarkable shawing. About 20 older-gates attended the sessions of the congress, hairing "from Johannesburg to trkutsk (Si-beria), from Belfast to Rangoon, from Montreal to Sydney," and including Dr. Theodor Hersl, the father of the movement, Dr. Max Nordan, Israel Zangwill, Sir Francis Montefore, and many other celebrated figures.

The two most noteworthy events of the convention were the speeches of Drs. Heral and Nordau, the one optimistic and full of enthusiasm, the other pessimistic and severely critical of Jewish shortcomings. Some disappointment was felt because Dr. Heral's much-heralded pronuncianmento regarding his interview with the Sultan of Torkey turned out to be but a statement that Abdul Hamid had authorised him to make public the fact that "in the reigning Calif the Jewish people has a a friend and protector." During the progress of the congress, Dr. Heral received a telegram from Yildiz Klosk, expressing the "high imperial sastisfaction of the Sultan." According to the correspondent of The Jewish Chronich (London), Dr. Heral was the heroic figure of the convention, and his "commanding personality scenaed to dwarf every one else into insignificance." "To his followers," declares the same writer, "he seems wrapped in the invisible halo of his splrit. They divine in him a glory which they can not see with the eyes of the flesh." The correspondent continues:

"If Herzl's speech was the bread of our banquet, Nordau's was its meat, the dessert at this congress being provided by Zangwill. Dr. Nordau's address commanded the rapt attention

Or. Nordan's atoures commanders to rap a teterino of the delegates for over an hour and a half, loud and long-austained applause being the only form of the delegates for over the stress subjected. It is not the subject of the great savant, with his curious blend fleorine strength and dove like gentleness. When dealing with the miseries of the Russian and Rumanian proletariat, the orator's voice trilled with sympathetic emotion, which anon swelled into a positive roar, when with flashing eye and animated goad the core, when with flashing eye and animated goad the control works of the millionaires to the great Jewish cause.

At a general meeting of the shareholders of the Jewish Colonial Trust, it was reported that the total number of shareholders is now 126,000, and that the money subscribed amounts to about \$4,250,000. No practical steps were taken by the congress toward the disposition of this money beyond the decision to establish a legally safeguarded business in Palestine with a cupital not exceeding \$80,000, and, if possible, to establish also a loan agency among the Russian Iews.

The fracish Chronicle editorially comments most favorably on the sessions of the congress, and while it refuses to become a convert to the full Sionist theory, declares itself "gratified and impressed by the spectacle of Jews gathered from the ends of the earth to take counsel over the position of the race." It says further:

"The congress has been called the Jewish Parliament, the it can hardly be regarded as representative of all the Jewish people. But if it is to receive this somewhat grandiloqueut name, then it must in fairness be admitted that it bears favorable comparison with most of the other parliamentary bodies that free and fune and sometimes legislate in Europe. In sheer picturesqueness, a body whose members hail from places so far apart as reviewed to the properties of the properties

STAMPS OF THE JEWISH NATIONAL LAND FUND,

of the chair than is sometimes to be witnessed in continental parliaments, and many of the speeches, while cloquent in the extreme, were conceived in a spirit of perfect moderation, and were free from the ugly blemishes (such as the attacks on anti-Zionists) which disfigured the eloquence of previous Zionistic orators."

An increasing number of Christian thinkers are showing sym-

pathy with Zionist ideals. Hall Caine's interest in the new movement has been widely noted. In Boston a few weeks ago Prof. Crawford H. Toy, of Harvard, spoke at a Zionist meeting, and Dr. Edward Everett Hale sent a letter to the same meeting. lewish Comment (Baltimore), in calling attention to these facts, declares that "fairly interpreted, this all means that a new topic of the first importance has been placed before the civilized world for discussion." The American Hebrew (New York) thinks that the Basle Congress has "transformed the Zionist movement from a mere wind organization into a force with a practical end in view." Dr. Richard Gottheil, writing in The Maccabaan (New York), a new Zionist monthly, greets the convention as "the deliberation of a people determined to end the persecutions and wrongs of centuries." The American Israelite (Cincinnati) is probably the most outspoken of the American Jewish papers in its opposition to Zionism, and The Jewish Messenger (New York) takes a similar position, contending that "the remedy may prove worse than the disease." Dr. Emil G. Hirsch, writing in The Reform Advocate (Chicago), says:

"If the Zionists prove to us that Palestine, toward which uncoubtedly the eyes of the victims of modern nationalism in Russia and Galicia have been turning, will bring them relief and work their redemption, we shall to the utmost of our competency cooperate. The Jewish state under the protectorate of the European Powers we are afraid will not soon arise. But we think that Jewish colonies and settlements in Palestine will. And this soberer venture will be the permanent, we even think it will be the solo outcome of the Zionistic agitation.

## A DEFENSE OF THE JESUITS.

PROBABLY no religious society has played a more prominent part in European history than has the Society of Jesus, which soon after its inception became the object of persecution, not only from its Protestant enemies, but from the very church that it was called into being to espouse. The Jesuit Order has incurred the dread and suspicion of Roman Catholic bishops, archbishops, and popes, and it has been repeatedly suppressed by the church. It has been attacked in all countries and has been expelled from many, and at this moment it is being forced to leave France as the result of its refusal to comply with the requirements of recent anti-clerical legislation. Yet according to M. Henri de Ladevèze, a French scholar of some note, the ill-treatment of the Jesuits has been as baseless as it has been unjust, and in the current issue of The Open Court (Chicago), he enters into an elaborate defense of this remarkable Roman Catholic order. We condense his description of the history and constitution of the Society of Jesus:

"The Society of Jesus, founded August 15, 1534, in Paris, by Ignatins Loyola and six of his companions, was canonically instituted September 27, 1540, by the Bull of Pope Paul III., Regimini militantis ecclesia. It comprises, as do all religions orders, two kinds of members: Fathers and Lay Brothers. Fathers are either priests or destined to become so; but they do not definitely belong to the Society until after they have gone through a very severe and long term of probation. After a novitiate of two years, they take the three vows of poverty, chastity, and obedience, and receive the title of 'approved scholastic,' In this capacity they apply themselves, at their superiors' pleasure, either to teaching or to the study of theology, philosophy, literature, or science, until, having passed ten years in the Soclety and having attained the age of thirty at least, they are elevated to the rank of 'spiritual coadjutor,' They are employed, according to their capacity, in teaching, preaching, or in various ecclesiastical ministries, in the mission-field, etc. Ultimately, after they have been tested during a further term of several years, they are allowed to make their solemn profession, which includes the vow of obedience to the Pope, peculiar to the Society of Jesus; or, if they are found wanting in any of the necessary qualifications, they are retained with the title of 'Jesuit of the three vows,

which confers no further prerogatives; or, if they are found utterly unworthy, they may be expelled from the order. The Lay Brothers, who are much less numerons, take their vows after tenyears' trial, if they are thirty years old at least. They are called 'temporal brothers' and are employed as porters, cooks, sacristans, etc.

"The Society of Jesus has really but one head, the General, who, before the suppression of the temporal power of the Pope. resided at the Gesu in Rome. He must be a professed Jesuit of the four vows, and it is the professed Jesuits of the four vows only who take part in his election, which is by secret ballot. He has four 'assistants' to help him, and an 'admonisher,' elected in the same way as himself, to keep him in, or, if need be, to bring him back to the right path. The electors of the General have the right of deposing him if he is guilty of a serious fault, He delegates, usually for the term of three years, a part of his authority, in each community, to some member of the Society, professed Jesnit or no, who thus becomes, for the time being, the superior of his brother members. Furthermore, the various establishments of the same district form a province, which is more or less extensive in proportion to the number of institutions it contains, having at its head another delegate, always chosen exclusively from among the professed Jesuits, who bears the title of Provincial."

"As may be judged from this sketch," comments M. de Ladeveze, "the Society of Jesus is founded on very wise and very liberal principles; very wise, for there is but one authority, and I need not dwell on the advantages accruing from this fact; very liberal, since this authority emanates from the free choice of those who recognize it, and is never in danger of degenerating into tyranny, because it is subject to the rule whose observance by all it is its special mission to secure." The Jesuit Society has been condemned for its strict vows, its system of rigid supervision, and its practise of casuistry; but the writer maintains that its rules and regulations are the same, in all essentials, as those adopted by every important religious order since the sixth century. "No other body," he says, "studies its subjects so minutely, nor for so long a time, before admitting them; in no other body have the future members so many means of welghing during so long a period, not in theory only but in practise, the advantages and disadvantages of the engagement they aspire to enter into." He continues:

"Without having the picturesque costume, without practising the extreme outward mortifications of monastic orders properly so called, the Jesuits apply themselves, more perhaps than all others, to inward mortification; and it is difficult to understand the state of mind of a man who, having all the requisites of earthly happiness, knocks at the door of their novitiate. And yet youths, magistrates, priests, officers, noblemen, all classes of society, but especially the upper classes, furnish them with recruits. and, in Catholic countries especially, very few names that are to be found in the book of the peerage but are inscribed in theirs. How then is one to explain the accusations that are brought with such unrelenting animosity against religious who. if they are guilty, have certainly not yielded to personal motives in becoming so? For what could the motive be? Pecuniary advantage? But the greater number of the Jesuits belong to rich families and had to renounce their fortune to enter the society. Ambition? But most of the Jesuits occupied enviable positions in the world, some having found them in their emblazoned cradles, others having won them by personal work and merit. Besides, the order founded by St. Ignatlus, which differs from others in so many ways, differs also in this, that its members can not accept any dignity either civil or ecclesiastical; they can not become either cardinals, bishops, or even simple canons,-unless the Pope forces them so to do on pain of committing mortal sin. The words that Dante saw written in black letters over the gate of hell: 'Lasciate ogni speranza, voi ch'entrate,' would not be out of place on the doors of the houses of the Society of Jesus as applied to ambition,"

All the reproaches that are leveled against the Society of Jesus, declares M. de Ladevèze, can be leveled, with equal justice, against all the religious orders and against the Roman Catholic Church herself; and even their worst enemies are compelled to admit that the Jesuits have labored ceaselessly and dutifully, without any personal gain, in tuition, in preaching, in missions, and in aiding the dying. The writer concludes:

"If we consider them from a purely lay point of view, we are astonished at the services they have rendered, and at the number of distinguished men they have produced in the space of three centuries, in tuition, in science, and in letters. "There are amongst them,' says Voltaire, 'writers of rare ment, scholars, corators, geniness." No other religious society,' confesses D'Alembert, 'can boast of having produced so large a number of men famous in science and in letters. The Jesuits have practised every variety of style with success; doquence, history, antiquity, geometry, profound and poetic literature: there is hardly a class of writers in which they have not men of the first

"Shall we consider the lesuits as private persons? There are very few amongst them, as everybody admits, who give any serious cause for complaint: no other body has ever counted so few unworthy members. It is always their spirit that is attacked, But I have already said that their spirit is the spirit of Catholicism whose best representatives they are. Let their oppouents reproach them with being Catholics, if reproach them they must: but let those of us, who are conscious of the injustice of such a reproach, recognize the good in them; as to the rest, let us remember that they are human, and therefore subject to the faults and failings we all share, but against which they strive far more constantly and efficaciously than do so large a number of ourselves, so large a number, above all, of those-the race shows no sign of extinction, alas !-who having expended all their severity upon others have nothing but unbounded indulgence at their disposal when it comes to dealing with themselves."

#### WHAT WOULD THE FREETHINKER SUBSTI-TUTE FOR THE BIBLE?

SOME time ugo the Boston Investigator, a paper widely circulated among Freethinkers, sent a letter to a number of its subscribers containing the following question "What would you substitute for the Bible as a moral guide?" The following replies are among the most interesting and representative of those received: Judge C. B. Waite . "The sense of justice should be our moral guide." Hugh O. Pentecost . "If any one believes a substitute for the Bible is necessary, let it be 'Leaves of Grass,' by Walt Whitman." H. L. Green, editor of The Free-Thought Magazine: "Substitute the teachings of science." Dr. R. W. Shufeldt: "Education." 1. Rayne Adams: "Common sense." Rufus K. Noves, M.D.: " 'Precepts of the Seven Sophists' are an ample substitute for the Bible." George E. Macdonald, "Select from ancient and modern custom what cultured reflection approves." George Allen White "Let us have the best of Zoroaster, Buddha, Homer, Zeno, and Jesus," John P. Guild: "Brains." Franklin Steiner, "Reason and experience." Dean Duilley: "A scientific encyclopedia, compiled by men like Spencer and Huxley." Alexander E. Wright: "Spencer's 'Data of Ethics."

The Universalist Leader (Boston, January 11), commenting on this miscellaneous assortment of views, finds in them the expression of a definite tendency in modern thought, but declares it to be a tendency that can result only in "a chaos of moral philosophy and an obscuration of simple, definite, straightforward moral discrimination." It continues:

"One plain truth is that the morality of the world, even its conventional morality, is the product of the long ages of toil and suffering. Marriage and marriage laws may be imperfect and often a failure, but there is a bottomless pit just beyond the repudiation of these. It is well to see just where we are going. In all this tumult about the "authority" of the Bible let us keep clearly in mind the drift of things. Whatever the critics may say, the mass of mankind onced and must have some simple, direct, specific moral precepts. Without superstition, or the suspicion that because a thing is written in the Bible it is different from the same thing out of the Bible, we may affirm that in all literature and all life there is nothing to compare in simplicity, of directness, and universality with the Decalog and Beatitudes. Thou shalt not kill, steal, bear false witness, commit adultery, or cover, are things concerning which the intelligence of the average man will not go askray if let alone. The Golden Rule can be understood by a child, and sages do not get beyond it. One can easily understand the protest against that interpretation of the Bible which counts covenants, sacrifices, doctrines, or church government above plain morality, while at the sane time he may prize these old codes of conduct which are the landmarks of the Book as the finest things in the moral history of nan.

"We need a revival." Social radicals need a revival. There is chaos and disorder among those who jaunity tilt at moral opin ions or conventionalities which are the product of ages of experience. We need a revival of 'brains' and 'common sense,' we need to get down to the fundamental proposition that while we regard Spencer, Huxkey, and Walt Whitman as friends of truth, we are not ready to substitute them for Moses and Jesus as the moral lawgivers of the race. We need only to compare these raplies of the Critical Policy of the Bible with the Decalog and the Beatitudes to see how infinitely superior to their critics are the materials of the Bible in moral profundity, universality, simplicity, directness, and grandeur."

Dr. W. A. Croffut, a writer in the New York Truth Secker, takes up the discussion from the radical point of view, affirming that the Christian allegation "that the Agnostic has nothing to substitute for the superstitions be would destroy, that all his teachings are negative, and that while he ruthlessly tears down he never seeks to build," is the reverse of the trutil. He says (December 21)

"As a matter of fact, most men in civilized society have a system of ethics for the control of their private lives which is decrived, not from any book, but from necessary contact with their fellows. There could be no peace muong men without a tacit agreement not to invade each other's rights. That such nu agreement was essential to human comfort was known long before Christ, before Moses, before Cain, before Zoroaster, before Confucius, before the Egyptian sage sculptured his moral code upon the walls of Thebes. It became known as soon as the troglodyte associated with his species and began traffic."

Agnosticism, declares this writer, offers men, in exchange for Christianity, "goodness without fear of God; happiness without heaven for a reward; law without a lawgiver; instural morality; instead of artificial morality; enlightened self-interest as the natural basis of ethics; and experience from contact with our fellows as the real guide to conduct."

#### RELIGIOUS NOTES.

THE REV. DR. J. R. STEVINSON, professor of ecclesiastical history in the McCormick Theological Seminary of Chicago, has accepted a call to the pastorate of the Fifth Avenue Presbyterian Church, New York made vacant by the death of Dr. Purves. Dr. Stevenson is a comparatively young man, and in a member of the international Committee of the Y. M. C. A.

IR THEOROM, L. CYLER, of Hoodyn, has been celebrating his eight their birthinds, and the comprations of a least of frends. The Europelist devices a special issue to this noteworthy event. "Dr. Cuyler," remarks The Index-bard," has prepared during these mearly size to marks The Index-bard, and the Index of the Index of the Index thousands of articles on religious themes." In addition, Dr. Cuyler is the author of about Leweny books.

# FOREIGN TOPICS.

# BRITISH SOLDIERS AND BOER WOMEN.

A NGRY remonstrance fills the English newspapers as a result of German cancatures described as "vile slanders." These caricatures are based upon Boor war conditions, real or alleged, as they affect the honor of female captives. Thus The St. James's Geattle (London).

"Surely a point has been reached at which it should be found

UNRECORDED HISTORY-THE TOP OF A KOPJE, A.D. 1990.

THE AGED RIP-VAN-KITCHENER (aside to his venerable Tommies):
"Aha! The only survivor 'coming in 'at last!"
THE LAST OF THE HOERS: "Vaid a momend! Vod derms you gif me;
mein gombled intebendence "moddervise | Dielb always on gontinando."

possible to convey a wish to continental governments that an authoritative contradiction might be made of the vile slanders of the continental press on the livritish soldier in South Africa. Mr. William Maxwell, the late special correspondent of The Nandred at the front is as he was also during the tour of the Duke and Duchess of Corawalli, writes a letter to his paper this morning giving specimens of the latest absurd and scandalous accusations.

PARTNERS.

BRITANNA: "After all, my dear, we needn't trouble ourselves about the others."

COLONIA: "No; we can always dance together, you and 1!"

made by the Berlin Tagliche Kunduchau. This journal is one not only of extabblished position, but read almost entirely by the import classes in Germany, yet it states specifically that thirty-five per cent. of all Borr women and girls have been outraged by British officers and soldiers, that one-half of the 'British increasaires' are tainted and are breeding a 'generation of criminals,' and that young girls of twelve years of age and upward are driven to Pretoria and forced to sacrifice themselves by torture."

It is upon allegations of this mature that the offending caricatres are based. A cable message to the New York Times says that the London Times has eitherfully protested. A copy of the issue contaming the protest has not, at this writing, reached the United States, but it is in part, according to the New York Times's cable report, as follows.

"These papers are not gutter-sheets, but are sold everywhere at the stations of the state railroads, even at Potsdam station,

TO WHOLE WORLD AN ENGLISH PLAN PUBLING.
Unfortunately, the trick does not seem a success.

where the Emjeror is constantly traveling. He was finally obliged to personally order their removal. Neither are these papers amonymous. One of the most infamious of all, entitled "The Beet War," bears on the title-pages the names of persons distinguished in the literary and artistic world of Germany. From a purely technical standpoint the paper is an art production, but it is difficult to find words to convey a notion of the fifth which it is childred and writers centure to lay before its cultured German readers. British soldiers are represented as robbing the dead, Mr. Chambelshir's state-coach is depticed as a cart laden with skeletons, and King Edward is shown dead drunk in this helprom receiving the news of cronje's surrender,"

The Taglibe Rundshau (Berlin) gives as authority for its accusations the foames of Dr. Vallentin, "a former Transaction official who fought with the Boers"; Fred Lavelle, also a Beeringting reservint, and others whom it describes as "closely connected with members of the Boer Government." In reply The Standard was

"In a letter which we print to-day from Mr. Maxwell, our late special correspondent in South Africa, attention is called to some ruly atrocious specimens of vilification, which a Berlin newspaper of some repute, the Tagliche Rundichan, has thought fit to lay before its readers. Accusations of the most monstrous character are made against our officers and troops. We are told that the concentration-camps were hells of iniquity, and that more than a third of the women and girls in the annexed colonies have been made the victims of brutal lust on the part of British officers and men. Other charges almost too loathsome to be repeated are made. It is true that some of these offenses, and one in particular, of a peculiarly painful character, were freely charged against the Germans in France in the war of 1870. But this fact renders them none the less fantastically absurd when applied to a 'mercenary,' so orderly, so well-behaved, and so considerate as our own patient, enduring, and kindly 'Tommy Atkins.' Mr. Maxwell shows that the alleged evidence on which the Berlin journal affects to rely is no evidence at all. Its authors-mercenaries in the true sense of the term-were foreign agents in the service of the Boers, who have come back to Europe to calumniate their victorious foes, to whose elemency, it may be, some of them owe their liberty and lives."

The same paper cites the French military attacké and others who attest the good conduct of British soldiers. But the caricatures, according to last accounts, continue to be offensive, all of them bearing very pointedly upon the alleged violence, all of twomen. The Datify News (London), which warmly opposes the Salisburg Government, brins this item from Vienna:

"A meeting of women has been held in one of the suburbs here to protest against the treatment of Boer women and children. A Vienna doctor named Sens, who served in the Boer army and has only just returned, gave a number of details of outside which he alleged to have been committed upon Boer women and girls. These, he said, were not the work of truops who were sent out at the beginning of the war, but of the reserves who went later."

## OUR FRIENDS IN THE WAR WITH SPAIN.

THE attitude of the European Powers during our struggle with Spain a few years ago is the subject of continued dispute abroad. The matter seems to have been reopened as a result of this statement in a recent number of the New York

"When the French Government, at the initiative of Austria, was approached with a proposal of common mediation between the United States and Spain, the reply of France was identical with that of England. This was that, if all the Enropean Powers agreed to mediate, Frince would not wish to remain alone in refusing cooperation to preserve peace. But at this moment, most unexpectedly, Count Muravieff, the Russian Minister of Poreigu Affairs, communicated to Count Villagonzale, the Spanish Ambassador at St. Petersburg, the absolute and formal related to the state of the state

This statement of the case was quoted recently by the Washington correspondent of the Loudon Times, and it was promptly challenged by that paper in its editorial columns. It adheres to the story that has found wide acceptance here, to the effect that the proposed combination of European nations in Spain's behalf was prevented by the refusal of England to participate, and not by any such course on the part of Russia or Prance. It remarks that M. Hanotaux, Minister of Foreiga Affairs of France during our war with Spain, "with superior adoutness, contents himself with remarking that "the story has been contradicted twenty times": that the United States Government knows 'perfectly well the whole truth of the matter,' and that it willingly accepted the good offices of France during the negotations for peace."

The London Times then proceeds to speak of the new version of the case as given above from The Tribinn. It says:

"Whatever the opportunities for knowing the truth that author fof the new version) may have enjoyed, he did not use them to the best advantage. He professes to know the answer of the French Government to the Austrian proposal for a common mediation between the United States and Spain. He asserts that it was identical with the answer of England, and that it was to the effect that, if all the Powers agreed to mediate, France would not hang back. If those assertions are true, our correspondent says, the Washington Government is strangely misinformed. It does not believe that England gave Austria any such answer. It believes that she gave a very different answer, and the 'authoritative ' personage, our correspondent states, either does not know what that answer was, or gives an account of it which is incorrect and wholly misleading. , , , Whatever the tenor and tone of the supposed communication to Count Villagonzalo may have been, our correspondent positively asserts that it was not this step, but 'the distinct refusal of Lord Salisbury's Government to be a party ' to the Austrian scheme which disposed of that hopeful project, to the bitter and enduring disappointment of continental enemies of the Anglo-Saxon race. England, he declares, was not content with holding completely aloof. Lord Salisbury used language which convinced the Austrians that in no event could they have the cooperation of England, and without that cooperation the Austrians knew their designs were futile. M. Hanotaux is much more cautious than the 'personage.' He says the story has been often denied, but he prudently abstains from deuying it himself. The United States Government, as he very truly says, know all about it. They do, and that circumstance makes the fact that they too have never denied it significant. They made use of the good offices of France in conducting the negotiations, but the special reason why they did so was, as M. Hanotanx must well know, because France had shown herself rather ostentatiously the friend of Spain."

Documentary evidence of these facts exists, proceeds *The Times*, "and that evidence may be produced if Parliament or Congress choose to call for its production." The French newspapers have been silent on the subject since the new version was produced, and the Paris correspondent of the London newspaper makes this silence the subject of a pointed despatch,

# ITALIAN IRRITATION OVER AMERICAN LYNCHINGS.

THE lynchings of Italian subjects in certain parts of the United States have become the subject of warm debate in the Italiau parliament and press. Says the *Tribuna* (Rome):

"That the American federal Government can not, in the prenet state of the line, intervene for the protection of foreign citizens is indisputable. But for this very reason McKinley, after repeated lynchings had called forth protests and diplomatic remonstrances from Italy, realized the necessity of remedying this defect in the laws and obligations of the American Government. Can it be possible that Roosevelt, who has such lofty ideas of the duty of guardinaship inherent in his office that, defying prejudice, he invites mean of color to his own table and appoints them to office: that Roosevelt, who understood his duty to cut off the head of the hydra of Anarchy that had made its lair in the matis-social evil of lynching, from putting an end to a moral and judicial anarchy that strikes both at the laws and the fair fame of the United States? We can scarcely credit it."

What the Italian Government desires, according to The Datly. News (London), "is the real and permanent remedy of having federal laws to give Italian subjects the protection guaranteed by treatise." The Standard (London) thus summarises the language of Signor Prinetti, Italian Minister for Foreign Affairs, in addressing the Senate at Rome:

"The Italian Government would continue to protest, in the hope of obtaining satisfaction, against a state of things which constituted an offense against international treaties. It had expressed a confident hope that the federal Government would succeed in preventing such incidents in the future, and had

pointed out how serious a thing it was that the Government of the United States should declare uself unable to maintain its engagements in conformity with international treaties. The Government of the United States had not replied in writing, but had admitted that the Italian claims were well founded, and had promised to consider the question most carefully,"—Translation made for The LITERANY DIONS.

## IS THE QUEEN OF SERVIA RESPECTABLE?

THE reputation of the Queen of Servia is warmly discussed in continental newspapers as a topic closely allied with the destinies of the Balkan states. The *Independance Belge* (Brussels) says:

"The news that the King and Queen of Servia are soon to pay a visit to the court of Vienna is, to say the least, astonishing, and it is difficult to

Queen Draga's personal character were made by the Phicola (Trieste), whereupon the edition was confiscated by the police, The Tomps (Paris) goes very thoroughly into the subject of Queen Draga's reputation as it affects the situation in the Balkans, saying

"The King, it appears, remains in love with his wife. This fact upers many plans, but it can not fairly be alleged to the discredit of a husband, even when he is on a throne. He has not yet, it is said, after eighteen mounts of marriage, lost lune of direct posterity, and he is resolved not to bring my the quosition of the succession muttle circumstances themselves lung it my, and only then in case it is a matter of certainty and not of mere consequent."

After dismissing as sille the tale that King Alexander is not love with a younger sister of the Queen, "whose leants is not of the sort to inspire guilty passion or to occasion trouble in the family," the Temps considers the effect of Queen Draga's past upon the Balkan problem. It concludes

"When political policy speaks, when it becomes a question of the influence patiently acquired at Belgrade by a sagacious diplomacy, when, moreover, all that can be brought against a queen is the fact that she was once a shepherdess—or something similar—as we read in the fairy tales, and that she won the heart of a king, then the accredited representative of state policy has but to say a word. The clouds vanish."—*Translations made for The LITERARY DISEST.* 

# EUROPE ON THE REBUKE OF GENERAL MILES.

E UROPEAN newspapers seem to think that the rebuke to General Miles administered by President Roosevelt is good evidence that in the United States the military is subordinate to the civil power. Says the Temps (Paris):

"General Miles, in giving his interview to the reporter of a Cincinnati newspaper, expressed himself in intemperate langauge, talking like a soldier who little knows how to gloss the truth' about the court of inquiry and its majority. This was a fresh scandal. There would have been some excuse for a veteran of a great war coming to the support of a brother in arms unjustly dealt with, and taking the side of Schley and Dewey against the navy chiefs. But it could not be tolerated that the commander-in-chief should insult, through the press, a naval council of war. In the United States there is no trifling with the principle of the subordination of the military power to the civil power. Secretary of War Root asked General Miles for an explanation, which the latter gave with more eagerness than coherence. Thereupon President Roosevelt severely admonished the general, told him not to repeat his act, and warned him not to expect imminity for future errors."

This extract fairly represents journalistic opinion abroad, with exceptions, however. Among them is *The Saturday Review* (London), which says:

"The public were largely adverse to the judgment, and among the rest General Miles, who of course was interviewed. For his ekpression of opinion, which he justified on the ground that he asks existing the right of a private citizen, he was first reprimanided by a letter and afterward had up like a naughty school-by lefore the President and with the full force of the President's powerful voice told before a considerable assembly that as commander-in-chief he ought to mind his own busiless. By way of adding to the general silliness one of the American papers justifies Admiral Schelley lay a reference to Nelson, who, we are glad to know, disobeyed the orders of Admiral Jarvis in attacking the Preinch at Tradition: I start in the start of a distribution of the proper superson of the American papers and the start of the states. The present the start of the

# HAS CHILE SPOILED THE PAN-AMERICAN CONGRESS?

Tills question must be answered in the affirmative, declares the London Spectator, which thus explains Chile's atti-

"The little state is supposed to dislike North American influence. She has already spoiled the Pan-American Congress, and she is believed to wish for a South American federation for defense, which might greatly interfere with North American ascendence."

The Chilcan attitude attracts more attention in the foreign press than any other single feature of the congress, excepting the position of the United States. The Frankfurter Zeitung calls attention to Chile's mawillinguess to take part in the congress unless all existing international disputes were eliminated from the scope of arbitration. The Independance Integret Hurselb stays as check to the congress now can not spoil "the vast project" of Pan-Americanism. The Union Ibero-Americana (Madrid) denounces the United States for causing all the mismunderstandings in the congress. It says the South American Powers would be harmonions if the North Americans would let them alone. The Efront Madridy is of the same opinion. The

Lci (Santiago, Chile) repels all insinuations that Chile is responsible for disagreements. Of the subject of arbitration in the congress it declares :

"So far as the Chilean delegates are concerned, the most absolute conviction prevails throughout this country that they understand their duty perfectly and that they will interpret with wisdom the language of reason and of justice. We trust that at the end equity and right will emerge from the Pan-American Congress like pure gold from the crueible, and that the intrigues and calumnies having for their object the nullification of the gathering in Mexico will come to naught,"-Translation made for THE LITERARY DIGEST.

#### THE HEALTH OF THE POPE.

THE persistent rumors of the failing health of the Pope seem to find confirmation in the letter from the Rome correspondent of The Daily Chronicle (London), containing the news, cabled to the New York Tribune, that while the Pope was granting an andience to American pilgrims last Monday, he was taken with a fainting fit just as he was about to address them. The Pontiff, however, after being conveyed to his apartments, soon recovered.

A telegram recently received by the Temps (Paris) from Rome relates that the Pope complains to all foreign visitors of the false accounts of his health. "You see," he is reported as saying, "that it is not all over with me. I work six to eight hours a day. and my work is not easy, for it embraces the whole church. Please say that I am not yet dead." The Figure (Paris) also recently published a letter from Rome, contradicting the statements relative to the failing powers of the venerable head of the church. In an interview held by the correspondent with Dr. Mazzoni, the physician emphatically says:

"You may coutradict all rumors as to the failing health of the Pope. His health could not be better, and the wonderful old man, according to his custom for sixty-four years past, continues his active life, which demands a tension of mind, an amount of intellectual effort of which you can form no idea. From what I can see now, there is no reason for predicting an immediate change. . . . For my part I predict that Leo XIII. will live to be a centenarian."

The Allgemeine Zeitung (Munich) contributes an article on the subject of the Pope's health from the same point of view. It is taken from the letter of the Rome correspondent of the Kolnische Volkstag :

"The Holy Father is now ninety-two years old, and it is not a matter for wonder if his great age should assert its right to be felt. But he who speaks of Leo XIII, as one bowed by illuess and debility does not know what he is talking about. As an actnul fact, the Pope rejoices in the best health possible. Besides rising early and working with the Cardinal State Secretary, he daily grants a large number of private audiences. Only a few days ago, he remarked to a cardinal whom he was receiving: 'I devote seven hours daily to receiving cardinals and distinguished prelates.' It is true that his labors become somewhat lighter after the midday hour, but still it can not but excite wonder and admiration that an old man of niuety-two years should have the strength to daily hold fatiguing audiences lasting seven hours. An invalid Pope, as he is described by the Liberal newspapers, would be unable to do it. Not once has the Holy Father been overcome by weakness. Yet the Sunday andiences were discontinued? That is true, but the reason is not because the Pope becomes 'sleepy' or 'faint.' It is clear that colds must be guarded against; therefore, his private physician, Dr. Tapponi, insists upon it that every change of temperature be avoided. And the temperature of a room containing a hundred persons rises so high that it was feared that the Pope, upon leaving it. would take cold. This is the only reason why the Sunday audiences were discontinued. Moreover, this difficulty has now been obviated by distributing the persons admitted to the audience in different rooms, through which the Pope is conveyed,"

To all assertions or insinuations to the effect that the mental health of the Pontiff is not equal to the bodily, the Allgemeine Zeitung replies that the memory of the aged head of the church is absolutely unimpaired, and that he takes the keenest interest in everything that is going on in the world, as he recently showed, for instance, in regard to church matters in Germany. "Leo XIII. gives every evidence of a mental strength and firmness of will that remain undiminished,"-Translations made for THE LITERARY DIGEST.

#### THE INTERESTING MONSIEUR DELCASSÉ.

THE great attention paid in the European press to the French Minister of Foreign Affairs just now inspires The Spectator (London) to observe of him:

"Who could wish to upset a cabinet if it meant the loss of M. Delcassé? But, on the other hand, the overthrow of M. Waldeck-Rousseau is not the least likely to carry with it the loss of M.

Delcassé. He is to all appearance a fixture at the Foreign Office. There have been three ministries since 1898, and he has sat in all three of them. Nor can it be said that there was no difference between them, that the changes were personal not political, and that M. Delenssé retained his seat in all of them because the policy they all favored was his own. . . . The policies of these three cabinets have not been identical, and if "they have not, how does M. Delcassé defend

THEORITE DELCASE.

French Minister of Foreign Affairs. his having a share in all alike? Probably he does not trouble himself to defend it;

but if he did he might urge two very weighty considerations in defense of his conduct. The first is that the French cabinets differ greatly as regards the persons composing them, they differ very little as regards the principles on which they act. . . . The second consideration is that the foreign policy of France is of infinitely greater moment than any part of her domestic policy."

"This free soul has never been the slave of any political program, and shades of parliamentary opinion escape it," declares Baron Pierre de Coubertin in an elaborate article on Delcassé in The Fortnightly Review (London). His aim is "to increase the prestige of France abroad; to conclude advantageous negotiations; to foresee grave contingencies; to avoid useless conflicts; in a word, to steer among so many dangerous reefs with the greatest safety to his country."

The only discordant note is sounded by the Intransigiant (Paris) thus:

"To-day England has lost all prestige in Europe. Her degradation can be compared only with our own, Delcassé having at Fashoda pitifully surrendered to men who throw their guns away at the first attack from Dutch farmers whom the love of country has transformed into generals. If the corrupt Minister of Foreign Affairs had let Marchand alone, not only would we have been spared the direct insult, but Egypt would be free at this moment and our influence would preponderate there."- Translation made for THE LITERARY DIGEST.

## NOTABLE BOOKS OF THE DAY.

#### ROMANTIC SCOTLAND.

SCOTLAND: HISTORIC AND ROMANTIC. By Maria Hornor Lansdale. Cloth, e vols., 5% x s in., 80s pp. Blustrated. Philadelphia: Henry T. Coates & Co.

I N the spirit of a romantic enthusiast who has sat at the feet of Sir Walter Scott and hung upon the "Tales of a Traveler," browsing meanwhile among the old ballads, Miss Lansdale has garnered the state of the company of history in the field where it is the field where it is the field where it is the field where the state of the company of history in the field where its

meanwhite among the old ballads, Miss Lansdale has garnered here a true florilegium of the romance of history in the field where its flowers grow wildest and richest. Miss Lansdale passed a year in Scotland, in company with her sisters,

Miss Lansdale's handsome volumes are embellished with many interesting views of historic places and edifices, in photogravure. A chronological table of important events, and a genealogical chart of sovereigns, are useful features.

# A CHARMING BIOGRAPHY OF A CHARMING WRITER. .

JANK AUSTEN, HER HOMES AND HER PRIENDS. By Constance Hill. With Hustrations by Ellen G. Hill, and Reproductions in Photogravure, etc. Cloth, 5½ x 5 (n., 19pp. John Lame.

It would appear that Jane Austen is not alone charming berself, but is the cames that charm is in others. Certainly, this book of the Misses Hill—for the illustrations are as important a part of it as the letterpress—has much of Jane Austen's attractiveness about it. The same quiet sense of dignity, combined with a sense of hamor, a lore of goosts, and sympathy for what is refined is common to the novelint and to this account of her entourage. Every place where Jane Austen ever lived or lodged, many of her family connections, and several of the scenes which may be plausibly identified with prominent Landscapes in the novels are respressed here in black and white.

For the letterpress, Miss Hill has wisely gone to the immortal Jane

herself, and gives copious extracts dealing with the scenes referred to in the various novels, or in the novelist's own life. This makes the work a sort of anthology as well as a guide-book, and, in every way, it can be recommended to those who have the taste to appreciate the exquisite charm of "Aunt Jane's" novels.

## THE CÆSARS AND HOMICIDAL MANIA.

THE HOUSE OF CEBAR AND THE IMPERIAL DISEASE. By Seymour Van Santvoord. Cloth, 6½ x to in., 298 pp. Paeracts Book Company, Troy,

FOLLOWING the example of Mr. Baring-Gould, Mr. Van Santvoord presents in a well-distrated oviume the tragic family hisvoord presents in a well-distrated oviume the tragic family hissketchy appendix of the fate of the emperors aucceeding Nero. Mr.
Baring-Gould was popular enough. His book might have been adequately described as a journalister revision of Tactiss. But Mr. Van
Santsword goes even one step further. One might almost describe his
tray the worse reading, and for the mere purpose of following the
land career of the early Gewarn "The House of Cestar" is quite an
adequate account, and the Histrations are superior to thuse which
adorned Mr. Baring-Gould's book. Whether equal care has been taken
to test their authenticity may well be doubted.

But Mr. Van Santword puts forth his book as something more than a contribution to the parlor-table. He is of the opinion that he has solved the mystery of the Clesars in a pathogenetic manner. He gives an elaborate table of statistics at the end of the first part of his book, and the contribution of the Clesars. He accordingly suggests that murder was in the blood of the Clesars, and

traces this tendency to the hereditary influence of Livia Augusta, who, according to him, introduced domestic murder among the Romans. The theory is ingenious, but scarcely bears critical examination, since homicidal mania, if it be hereditary, has never been known to restrict itself within the family circle. That there was a touch of insanity among the early Caesars was a suggestion of Mr. Baring-Gould and others, which has received general acceptance; but the abnormal circumstances of the case, the isolation of the emperor, the divine bonors paid to him, the absence of responsibility accompanying those honors, would be enough to cause the intellect of the sanest man to totter, without an insane tendency in the

SEYMOUR VAN SANTVOORD.

ter, without an insant encouncy in the blood. However, it is unnecessary to go into very much detail with regard to Mr. Van Santwoord's theory. On the face of it, it can not apply to the hundred emperors or so who followed the Gæsars, and are included in this book, which scarcely professes to be much more than a picture-book, and, as work, well serves its nurnose.

## ANOTHER VICTIM OF ROMANCITIS.

THE VELVET GLOVE. By Henry Seton Merriman. Cloth, 12010, 234 pp. Price, \$1.50. Dodd, Mead & Co.

HISTORICAL romance-writing has spread among our novelists like a contagious disease. It was to be expected that the literaction of impossible adventures. A year or more ago wise people propheleid that the trouble would soon be over; but historico-romancitis still rages, and day by day we hear of some writer who has succumbed to the prevailing infection. Only those with the strongest literary constitution to the almost unwaying form in which it runs it sources. Let wreet be as milke as possible, with well-developed mannerisms and styles of being own, then see them writing historical romances, and they turn out books on similar that they give the lappression of having been manifectured by a nomance factory latened of being the work of individual reactured by a nomance factory latened of being the work of individual

Mr. Henry Seton Merriman is among the latest victims, but one may observe certain differences between his book and the usual historical novel. While the book starts out in good orthodox fashion by a murder, the rest of the killing done in the book is done in bulk, and much trouble is therefore spared the public and the author, for constant doueling after a time gets on the nerves. The beautiful hervine, while she has the pinck of the ordinary berofine of the historical movel, is met already and the contraction of the pinck of the ordinary berofine of the historical movel, is met allease usually seen or to be as impossibly resourceford as these poor

Mr. Merriman has carefully preserved most of his old faults in writing his latest story. He long ago adopted a simple formula for differentinting his characters. He gave each one a dominant trait or two and brought them in evidence as often as possible. So in "The Velvet Glove" the hero is labeled silent, practical; the villain (in this case the Jesnit order), unscrupulons; the deputy villain, inscrutable.

The gentleman who is murdered in Chapter 1 is the father of the heroine. A political exile, he returned to Spain after fifteen years, baving amassed an immense fortune. His will in favor of his son is known to the Jesuits, and as his son is about to enter the order, the money will of course go to the church, and so to the Carlists, who are in need of funds. Dying, Francisco de Mogente changes his will, leaving his money to his daughter, a girl of fifteen. The rest of the book is a struggle between the deputy villain, Evario Mons, and the book is a strugger between the deputy visual, and the hero and hero's father; the former endeavoring to get the girl to take the veil, the latter to save her from it. There is a midmight runaway, match and a goodly number of other adventures.

While "The Vetve Glove" is a historical novel of the least virulent sort, only faint traces of the former excellences of Mr. Merriman's

sort, only faint traces of work are to be found in it.

# THE RE-CREATION OF AN OLD KINGDOM.

THE WESSEX OF THOMAS HARDY. By Bertram C. A. Windle. Illustrated by Edmund H. New. Cloth, 5½ x 9 in., 337 pp. Price, \$6.00, net. John Lane

N the old sense of the word as "maker" or creator, Thomas Hardy is more of a "poet" in his noveis than in his verse. Other writers of fiction have peopled places for us with the creatures of their imagination. It has remained for the greatest of living English novelists to recreate the places themselves, and so naturally and con-

vincingly that his American readers, at least, were unsuspicious of the process. We have always assumed in reading "Tess" and "The Woodlanders" and their fellow tales, that the "Wesser" described under that name had always been a well-known and generally applied name to the region of England that of old formed the leading kingdom of the Saxon heptarchy.

It was not until the last edition of "Far from the Madding Crowd" that we were enlightened. In the introduction of this the author says :

"The series of novels I projected, being mainly of the kind called lo-cal, seemed to require a territorial

THOMAS HARDY

cal, seemed to require a territorial control of the write to the papers from.

How Mr. Hardy has achieved this re-creation "by his marvelous powers of describing natural objects and scenery, as well as by his skill in delineating rustic character," is the theme of Mr. Windle's readable and reverent book. The copious illustrations by Mr. New are in artistic sympathy with the text, and the whole forms a "guide-book to the Hardy country" which inverse of the noveist can not well afford

#### A LAND OF SUNSHINE.

BY THE WATERS OF SICILY. By Norma Lorimer. Cloth, 8vo., 319 pp. Price, \$1.75. James Pott & Co., New York.

NDER the form of letters from a middle-aged brother to an invalid sister, in England, much entertaining, chatty talk about Sicily, not too Baedeckerish, and seasoned with a romantic love interest, holds the reader's attention in " By the Waters of Sicily." If the author's name did not betray her sex, it would have been conjectured by the style of the letters, notwithstanding an oceasional "swear word" as corroboration of her assumed masculinity.

This is a book to be read by the Northerner, and in the chill gray of winter, to be appreciated to the full. Everybody who loves flooding suniight, dazzling color, and riotous vegetation, as well as a simple people who have learned to "do without" nearly everything, must enjoy these pages. There is an easy, agreeable flow to the description, few statistics, and only a casual touch of pedantry in some allusions : e.g., the architecture, or Cicero's remarks about the wondrous island, and Verres' spoilations in it. As a rule, "Yours, J. C.," heeds very faith-fully his sater's request. "If there have been some gross inaccuracies in my letters, it is because I have followed your instruction: 'Write me long letters, and as womanish ones as ever you can. Tell me things about the people and all sorts of Sicilian things. I want to imagine I am seeing Sicily myself, and I never see sights."

Half the letters are from Syracuse, where a small but assorted group

of foreigners are lodged at the Villa Politi, a hotel run by a German woman, where they have Hyblean honey for breakfast and may stroll in a garden which Theocritus used to haunt when Hiero was king. Only a narrow strip of land and a road separate it from the lovely sea. Doris, a fresh young English girl, an orphan, is added to this idyll, and you see the middle-aged man's "finish" from the beginning, even if she does say that the honey of Hymettus "smells like pomade and tastes like sweet vinegar." They roam around in the dreamiest, desultory way, and don't "do" a thing. "J. C." is as passionately fond of flowers as he is of good news about the Boer war.

After swift-passing weeks of apricating in Syracuse, he acts as escort to Doris to Paiermo. They stop at Castrogiovanni, "a city ancient and gray, set upon a hill three thousand feet high . . . cold and clean, and wind-blown from corner to corner." They need Ætna, towering in the distance, to convince them they are still in Sicily. But the men are "the finest specimens of manhood" they have ever see

Finally, they wind up at Palermo, which they find modern and noisy, and long for Theocritus's garden again. The author indulges in some reflections on Sicily here. He admits that the Sicilians are immoral, but attributes this to the fact that they have no middle class, to whom Mrs. Grundy is patron saint, "They adore intrigue and scorn scandal. Mrs. Grundy would die from sheer neglect in a country where no one is shocked by his neighbor's morals and no wife expects fidelity."

"J. C." all along has been getting deeper in love with the fair Doris, but keeps clubbing his passion down with his "age." At Palermo, as if he were not handicapped enough by his years, Jack, son of a woman who had refused "J. C.," turns up and falls in love with Doris! Bnt—is it because a woman is writing the story \text{\text{--the sensible girl likes "J. C."}} to occasive a woman is writing the story?—the sensible grif laces? J. C. better and fairly makes him propose to her. Had this happened before the rest of the book had been written, would not the delte far niente of their sight-seeing. "By the Waters of Scielly" have been an even more enamored rhappody on Trioneria's efflugent sun and beaming Bowers and farry-like color? But it is very good indeed as it is.

#### PULLED DOWN FROM HIS PEDESTAL.

THE TRUE THOMAS JEFFERSON. By William Eleroy Curtos. Illustrated, cloth, 5 x 8 in., 395 pp. Price, \$2.00 net. J. H. Lippincott Company,

PARSON WEEMS set the style of American hiography in his eulogistic lives of the great style of American hiography in his eulogistic lives of the great style of American hiography. gistic lives of the great men of his time. American youth fed npon his stories of the wisdom and heroism of the earlier patriots, and have, in their turn, made our country great.

Now has come the hour of iconoclasm. Novels like "Blennerhassett " are written to prove the traitors of our young country its true patriots, and our patriots the plotting conspirators of the Revolution. In hiography we have not gotten quite this far, but the way is preparing. "The True Thomas Jefferson" is the fourth of a series purporting to present "the truth, the whole truth, and nothing but the truth." concerning American statesmen. To do so, it makes the fullest use of private memoranda and takes the greatest latitude in applying them to the discredit of the subject. Thus, proceeding upon the cynical theory that "where there is so much smoke there must be some fire," it forms from the slanders of Jefferson's time an indictment of "constructive" immorality, even white disproving specific charges. Mr. Curtis says of Jefferson:

lle was probably no more immoral than Franklin, Washington, Hamilton, and other men of his time. He was neither a Saint Anthony nor a Don Juan. Judged by the standard of his generation, his vices were those of a gentleman

In other ways the biographer insinuates judgments that are illegal in form and unjust in spirit. The common and expected courtesy of a successful contestant for office toward his defeated opponent, which lefferson extended to Burr, is construed to be an indication of the former's insincerity, because he (Jefferson) "was fully aware of Burr's attempt to use corrupt influences to secure his own election." So, too, it is inferred that Jefferson approved Burr's action in the famous duel at Weehawken, because " one looks in vain through Jefferson's writings for a condemnation of the murder of Alexander Hamilton.

There are other evidences, more positively unfair than this, that the biographer is a partizan Hamiltonian. Of the letter which Jefferson, when Secretary of State, wrote to President Washington at the latter's invitation, containing a full and frank statement of his charges against Hamilton, Mr. Curtis remarks that it "shows the depth of Jefferson's malice and meanness." To a reader who has seen the full account of the Hamilton-Jefferson controversy as presented by the accomplished historian James Parton, such a biased expression of opinion places William Eleroy Curtis on a par with Edwin Stanton Maclay, who applied the term "caitiff" to the action of Admiral Schley at Santiago.

Mr. Curtis, however, rises at the close above his Paul Pry methods of investigation and his Maclay judgments. His exoperation of lefferson from the charge of demagogy in establishing "republican simplicin governmental etiquette, displays the breadth of mind that marks a true historian.

If the entire book had been written in this spirit, we would hail the advent of another Parton. As it is, between even the eulogistic and moralizing Weems and the iconoclastic and cynical Curtis, we prefer Weems.

Thy form sits close upon the ground. Or perched upon a warm yray stone. As upward floats this lulling sound To cheer thy mate, who sits alone.

"Peace, good-will," and then to rest, With loving thoughts of mate and nest.

Thy nest is hidden in the grassblending colors is to hide -A dewdrop resting in the grass, Or crystal goblet in the tide. "Peace, good-will," then close the eye, Waile davinght fades in western sky.

The shadows deepen 'neath the hills; I breathe the breath of summer nights-The past'ral fragrance that o'er-spills These wently aloning grassy heights. "Peace, good-will," then fold the wings Till morning light new solace brings

Thy venners rise from nest and far When groves are hushed and meadows mute: Sometimes I catch a single bar,

Like wandering note from silver flute "Peace, good-will"; wat m broods the night. While moon and stars make silver light.

A bleating lamb just stirred the husb That fast is stealing o'er the scene : Then faintly comes the roar and rush Of distant train, the hills between, "Peace, good-will," and do not fear, Thy watchful mate is always near.

Then all is still, the day is done Thy head is tucked beneath the wing, A silver web by Long spon O'er all the hills is clistening

"Peace, good-will," and then good-night, Till skies are filled with morning light. -In December Harper's Magazine.

# Two Poems.

By THOMAS HARDY.

HIS IMMORTALITY I saw a dead man's finer part Shining within each faithful heart Of those bereft. Then said I: "This must be His immortality."

I looked there on a later day, And still his soul ouishaped, as when in clay, Its life in theirs. But less its shine excelled Than when I first beheld.

His fellow yearsman passed, and then In later hearts I looked for him again : And found him-shrunk, alas! into a thin And spectral mannikin.

Lastly I ask-now aged and chill-If aught of him remain upperished still : And find, in me atone, a feeble spark, Dying amid the dark

#### MUTE OPINION.

I traversed a dominion Whose spokesmen spoke out strong Their purpose and opinion Through pulpit, press, and song, I scarce had means to note there A large-eved few, and dumb. Who thought not as those thought there

That stirred the heat and hum. When, grown a Shade, beholding That land in lifetime trode, To learn if its unfolding Fulfilled its clamored code, I saw, in web unbroken. Its bistory ontwrought Not at the land has snoken

But as the dumb had thought. - From "Poems of the Past and Present."

one difficulty we meet with in selling our cigars direct to smokers by the hundred is to get enough men to

# Try Them

Type, ink and paper can be made to say anything, and the maker of a poor cigar can make a claim as broad as ours. We claim that our cigar, which we sell at \$10 per hundred, is the equal of any 20c. imported cigar. We grow our tobacco on our own plantations in Cuba. Manufacture the cigars in our own factory in New York. Our cigar makers are Cuban workmen, the most skilled cigar makers in the world.

Every particle of the tobacco is clear, clean, selected Havana leaf.

No one has returned the cigars. On the contrary, we are receiving re-orders and orders from our customers' friends in constantly increasing numbers. We want you to try them, and have decided to make this new offer to LITERARY DIGEST subscribers:

#### Our New Offer Upon approved request we will send you by express, all charges prepaid, one hundred of our "Flor de los Manantiales" cigars, perfecto size.

You may smoke ten of them, and if you are not fully satisfied with the cigars, you may return the other ninety and there will be no charge. If you are pleased with them, you of course agree to remit us the price, \$10 per hundred, in ten days.

You run no risk whatever, and are under no obligations to keep the cigars, or to pay for any part of them unless you do keep them. Let us at least send you our book, " From Planter to Smoker."

#### PERSONALS.

Ernest Thompson-Seton's Early Struggles,

-The publication of Mr. Thompson-Seton's latest book, "Lives of the Hunted," is a reminder of the unique place that he holds among American writers. His early struggles for success are thus related in the St. Louis Republic

"He was born in England forty-one years ago, He came to Caeada while a mere boy, aed there his education was begun. Going back to England before be had yet reached legal age, he finished such education as he was to get from books in one of the great public schools, and thee, returning to Canada, found his way to the province of Manitoba. For reveral years he worked his way as a day laborer, . . . Until 1881 Mr. Seton knocked about the province working where and how be could to earn enough money to keep himself going and usually carrying all his possessions on his back. Then, in 1883, he went to New York. For two days he tramped the towe with not a ceet ie his pocket, trying to get anything to do to keep from starving. At length, and almost by chauce, be lound himself in a lithographer's, asking for a situation, bolsterieg the claim of a seedy straeger with the drawings which he still had, made in his Western days. On the strength of these he was given a situation at \$15 a week : he bimself says he would have accepted \$5, but asked \$40.

For two years he worked in the city, hating it beartily, and then again broke for the open country. When he returned, in 1887, it was at the solicitation of the Century Company, whose attention had been called to his drawings of birds. From that time life has been easier for Mr. Seton, the scarcely less picturesque. He was beginning to be known for his scientific work. He had nullished two volumes on the birds and mammals of Manitoba. He has been rewarded by a recognized stand among Canadian scientists, and had represented Maniteba at the Chicago World's Pair of 1893, the position, indeed, having been created for him. Bet it was not until 1848 that he found the geeeral peblic.

"In that year appeared 'Wild Asimais I Have sown." Almost Instantly it began to be recog-Keown." placed that here was a man with a message, a man who knew something of great importance and knew it better than any one else, a man who not oely had good stories to tell, but could tell them well. Each year since then has brought aeother book from Mr. Seton. In 1899 he rewrote le an

enlarged form the story which is known to day as The Trail of the Sandhill Stag, but which had first been published in ae issue of Forcel and Stream, in 1886, under the title of 'The Carberry Deer Hunt ' 'The Autobiography of Wahb, the tirizzly,' was the book of rose; the lourth is Lives of the Hunted."

Mark Twain as an inventor .- Altho Mr. Clemens is known to be of versatile genies, his fame as ac inventer is cot so great as to threaten his literary repetation. He is at present possessor of three patents, all recorded at the Patent Office in Washington. The New York Press desetthed them as follows:

"A parent was issued in 1871 in his name for 'ne murovement in adjustable and detachable straps for garments' This materit strap is the buckle strap commonly used at the back of waistcoats and trousers but so made as to button on instead of being sewed to the garment. What the advan-

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

tages of such a strap are people are expected to find out for themselves, for Mr. Clemens dismisses the question by saying that they are 'so obvious that they need no explanation.

"His second patent was granted two years later, and was for the 'Mark Twain Scrap-Book.' majority of persons who use these scrap-books imagine that the name was given to the articles in the same manner that the name of a prominent man is bestowed upon a brand of cigara; but the scrap-book was the veritable invention of Mr. He had this scrap-book parented in Clemens England, France, and the United States, and it is the most successful of his inventions.

"The third invention of the creator of Huckleberry Pinn was far more elaborate than either of the others. It is described as a 'game apparatus.' There are two cards, one known as the 'nmpire's chart' and the other as the 'player's chart.' These cards are ruled off for writing the numbers of a series of years. Opposite each date is a small hole. The player announces that he will stick a pin a certain year and give some event which happened in that year. He mentions the event, and the umpire decides whether he is right or not. If he is, he is allowed to stick the pin to the hole opposite the date. 'In this manner, says the inventor, 'the game is played until one player has placed a certain number of pins in the holes of his chart.' It will be seen that these inventions of Mark Twain's cover a wide range of human effort, extending, as they do, from the solemn matter of trousers straps to the joyful game of historic dates."

# MORE OR LESS PUNCENT.

Life's Philosophy .- If you would create for

yonrself a future make a present .- Life.

Only Once .- "Professor, do you expel students often ?" "No. only once."-Pennsylvania Punch Howl.

Werse Still .- "I suppose that, being an actor, you have had a good deal of rough travel?" "Yes, and besides. I have lived in New York ever since they began building the tunnel."-Brooklyn Life.

THE MEHLBACH SADDLE CO., (Successors to the Whitman Saddle Co.) 104 Chambers St., New York.

# An Unusual Opportunity for Safe Investment

The Racine Knitting Co., of Racine, Wis., is offering for popular subscription 10,000 shares now remaining in its treasury, at par, ten dollars per share, full paid, non-assessable, and drawing full regular semi-annual dividends, guaranteed to amount to at least 34 (six per cent. per annum).

This company is engaged in the manufacture of the widely advertised RACINE FEET and Racine brand of hosiery and underwear. The product is sold by mail order methods direct to the consumer, either from the mill by catalogue, or through local salesmen.

The possibilities of the mail order field are peculiarly fascinating. The direct sales method is at present in its infancy, but is rapidly being adopted in all leading The industries which have passed the experimental stage are pioneers in a new lines

field in which competition is limited. As a result of vigorous advertising, the Racine Knitting Co. have established a good will, which is one of its most valued assets. Through the appreciation of satisfied customers it has learned the value of personal influence. The popular subscrip-

tion plan is to extend this by making each one of many stockholders actively interested in the extension of trade. The business has outgrown its infancy, the experimental stage is past, the com-

pany is splendidly equipped and is working on a proven policy. Every feature is endorsed by recognized authorities.

## DIVIDENDS ARE GUARANTEED

The present earning power of the company is such that its officers, who are responsible individually, give an unqualified personal guarantee that annual dividends of at least six per cent, per annum shall be paid in semiannual instalments on the first days of January and July each year.

In view of past earnings and with increased facilities, it is morally certain that dividends will exceed the guaranteed amount. All stock is common stock and shares equally in the dividends. The capital stock of the company has been increased to \$250,000, and it has been considered desirable to distribute 10,000 shares among as many holders as possible rather than among a few large purchasers.

Preference will be given subscriptions in order of their receipt.

We refer to any bank or commercial agency for a statement of our financial responsibility. We also have the endorsement of the following gentlemen resident in Racine:

IACKSON 1. CASE, Postmaster. and Savings Bank.

A. J. HORLICK, Horlick Food Company. C. R. CARPENTER, Cashier Commercial GEORGE N. FRATT, Cashier First National Rank

## Foreign.

SOUTH AMERICA.

Januarv 15.—The Venesucian Government fe-luses to permit M. Cecrestat, who leased the extates of General Matos, the revolutionery feader, to land from the French meanine La Gasyra, and the French consul there ener-getically protested; the filture ring steamer Libertaldor arrives at Savanilla, Colombia.

January 19 — The rebels in the vicinity of the Gulf of Maracaibo and Uchiro, Ventruela, have begun operations against the Govern-ment, and it is reported that Castro's sol-diers have met the rebels in Maracaibo.

Talmage on "Home,"-" Blessed is that home in which for a whole lifetime they have been gathering, until every figure in the carpet, and every panel of the door, and every casement of the window has a chirography of its own, spelling out something about father, or mother, or son, or daughter, or friend that was with us awhile. What a sacred place it becomes when one can say: 'In that room such a one was born; in that bed such a one died; in that chair I sat on the night I heard such a one had received a great public honor; by that stool my child knelt for her last evening prayer; here I stood to greet my son as he came back from a sea voyage; that was father's cane; that was mother's rocking-chair! ' what a Joyful and pathetic congress of reminiscences !" -From "The Marriage Ring," by T. De Witt Talmage. 12mo, cloth, 192 pages, \$1.00. Funk & Wagnalls Company, New York.

This book is a collection of fifteen sermons on marriage family ties, and dottes. It is in Tai-mage's best vein and forcibly shows his wondrous gift of rhetoric and beauty of illustration.

"A Mere Man" on the Servant Problem.—"Why do women fail as employers of labor? First, because they do not know; secondly, because they are too lazy to learn. Women bave succeeded, of course, but only where they are thrown upon their own re-sources. As long as men are content to become, so to speak, merely 'backers,' that is to say, people who provide money to keep up a fad which they call 'Home,' so long will women let which they call 'Home,' so long will women let things drift along without taking the trouble to make 'Home' a good investment."—From 'The Domestic Blunders of Women," by "A Mere Man." Illustrated by "York." 12mo, cloth, \$1.00. Funk & Wagnalls Company, New York.

we Work.

This book is an attempt by "a mere men," to correct many of the abuses for which he holds women responsible in this row a stronghind—the home. It has aroused a storm of criticism from all wives of the house-the home, the way of the house-the wives of the house-thought but he howe, to his cover astitutacion at least, just how many of the house-thoid veations any be overcome and avoided. Thousands of husbands are buying it and secoling the house-thought with the contract of the second of the house-thought with the contract of the second of the house-thought with the contract of the second of the house-thought with the contract of the second of

The New Discovery for Catarrh Seems to Possess Remarkable Merit.

A new catarrh cure has recently appeared which so far as tested has been remarkably successful in curing all forms of catarrh, whether in the head, throat, bronchial tubes, or lu stomach and liver.

edy is in tablet form, pleasant and convenient to take and no special secrecy ix maintained as to what it contains, the tablet being a scientific combination of Blood root, Red gum and similar valuable and harmless antiseptics.

The eafe and effective catarrh cure may be found at any drug store under the name of Stuart's Catarrh Tableta.

Whether the catarrh is located in the nose, throat, bronchial tubes, or stomach, the tablets seem to act with equal success, removing the stuffy feeling in head and nose, clearing the mucous membrane of throat and traches from catarrhal secretions, which cause the ticking, coughing, hawking and gagging no annoying to every catarrh sufferer.

Nasal catarrh generally leads to ulceration, in some

cases to such an extent as to destroy the nose entirely and in many old cases of catarrh the bones of the head become diseased. Nasal catarrh gradually extends to the throat and broechial tubes and very oftee to the stomach, causing that very obstinate trouble catarrh of the stomach

Catarrh is a systemic poison, inherent in the blood, and local washes, douches, salves, inhalers and sprays can have no effect on the real cause of the disease. An internal remedy which acts upon the blood is the oely rational treatment and Stuart's Catarrh Tabletals the safest of all internal remedica, as well as the most convenient and satisfactory from a medical stand polut.

Dr. Eaton receetly stated that he had succe used Stuart's Catarrh Tablets in old chronic case evan where ulceration had extended so far as to destroy the septum of the nose. He says, "I am eantly surprised almost every day by the excellent results from Stuart's Catarrh Tablets. It is remarkable how effectually they remove the excessive secretion and bring about a healthy condition of the mucous membranes of the nose, throat and stomach"

All druggists sell complete treatment of the Tab lets at 50 cents and a little book giving the symptoand causes of the various forms of catarrh, will be malled free by addressing F. A. Stuart Co., Marshall,

# Growth of Hair.

A Famous Doctor-Chemist Has Discovered a Compound That Grows Hair on a Bald Head in a Single Night.

Startling Announcement Causes Doctors to Mar vel and Stand Dumbfounded at the Wonderful

The Discoverer Sends Free Trial Packages to All Who Write.

After half a century spent in the laboratory. growned with high honors for his many world-famo discoveries the celebrated physician chemist at the

MISS HISLOP, of New Zealand and Her Marvelous Growth of Hair

head of the great Altenheim Medical Dispensary, 5451 Butterfield Bidg , Cincinnati, Ohlo, has just made the startling announcement that he has produced a compound that grows bair on any bald head. The dictor makes the claim that after experiments, taking years to complete, he has at last reached tha goal of his ambition. To the doctor all heads are allke. There are none which cannot be cured by this remarkable remedy. The record of the curse alreads standing of the great physician and the convincion testimony of thousands of citizens all over the puntry it would seem too miraculous to be t us

There can be no doubt of the doctor's earnestness in making his claims nor can his cures be disputed. He disse not ask may man, wuman, or child to take his or anyone else's word for H, but he stands ready and willing to send free trial packages of this great has a mind to have the property of the grown of the grown of the first half restorative to anyone who writes to him for it, succlosing a S-cast statup to prepay postage. In a single sight it has started hair to growing on heads said for years. It has stopped falling hair in one bour. It awer fails no matter what the condition, bour. It server falls no matter wast the consumon, age or sex. 'Old nich and young men, women and children all have profited by the free use of this great new discovery. Write to-day if you are baid, if your hair, eyelrows or eye lashes are this or short and in a short time you will

# A STRAIGHT SHOT

Brought About by Accident.

A lady who accidentally began eating Grape. Nuts and quickly discovered the strength that she gained, and quickly discovered the strength ghe food. She says, "Grape Nuts has done so much for me. When I came out of school I was broken down in health from overwork and nervousness. Every summer during the hot weather I have been practically exhausted and generally have lost five pounds or over

Quite by accident I began using Grape-Nuts and thought I liked it very much at first, but the taste grew on me so much that I am extravagantly fond of it. I ate it all last summer and was surprised to find that I kept up with plenty of strength, my nerve force increased, and I lost no flesh.

I know exactly what has sustained me for I have made no change in my way of living except to take on Grape Nuts. I never tire of lt. I always use it with cold cream in summer and warm cream in winter. This is a straightforward, honest letter and I trust it will be of service to you." Lucy J. Kowen, Cedar Falls. Ia.

craft Letters on Demontary and Witch-

In making our January Inventory we find in stock a few sets of Criterion Library (in cloth only) of which the bindings are slightly rubbed-not enough to impair their real value, but sufficient to prevent their shipment as perfect stock at our regular price of \$36 a set. There being only a limited number of these sets, we shall not go to the trouble of rebinding them, but have decided to let them go on easy payments of \$1.00 down and \$1.25 per month until paid for-less than half regular price. BY PROMPT ACTION NOW, therefore, a number of ambitious and deserving readers who desire 48 charming and instructive volumes, containing 17,000 pages of the best writings of the world, may now secure these special sets at about cost of making.

# JUST NOW ONLY

They are Yours for a Lifetime this Easy Way.

# \$1 Down and \$1.25 a Month.

# WE GUARANTEE

that these volumes, except for slight rubs or abrasions on the binding, are precisely the same as those sold at full prices; yet we cannot offer them as perfect stock, and our loss shall be your gain. This is Positively the Greatest Bargain ever offered in a strictly high-class standard publication. It can never be duplicated under any circumstances whatsoever. For those persons who enjoy history, biography, adventure, fiction, poetry, and travel, this is a really wonderful opportunity.

#### WHAT THE CRITERION LIBRARY IS.

Serious attention has been given to the selection of this library; it embraces history, biography, adventure, fiction, poetry, and travel. Each volume is an authority upon the field it covers, and is written in an entertaining style. With this library in your house no one need pass a dull evening, for all can find something here to interest and instruct them.

The set consists of forty-eight volumes, well printed upon special book paper, attractively bound in red cloth of special weave, with appropriate designs upon the cover in two colors. It is a well-made book in every respect, and one that will give entire satisfaction.

# HOW TO SECURE THIS GREAT BARGAIN.

Send 4: to the address below, and entire set of forty-cipls superb volumes, beauth in cloth, will be comply as a superbolic set of the address below and resident set of forty-cipls superbolic set of the comply comply as a superbolic set of the comply comply comply comply as a superbolic set of the comply c

#### REMEMBER

These seets are a good for all practical porposes as those low which we are getting regular roices. We guarantee that his inselions are no hisyard, and this jump to any seel in the greater than might occur in a few days we in your own home or office. As absolute proof of his statement, you may retain the books, and more will be promptly and cheerfully refunded. This is positively inches him and the positively inches him to be possibly and cheerfully refunded. This is positively inches hands of a lifetime.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent two weeks prior to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing must always be given.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. It instructions are given to this effect, they will receive attention at the proper time.

### TOPICS OF THE DAY.

# EUROPEAN RIVALRY FOR AMERICAN FRIENDSHIP.

THERE seems to be more excitement in London, Berlin, Paris, Vienna, and St. Petersburg over the question, what Power was most friendly to the United States during the war with Spain, than there is in this country. Our papers look at the dispute very philosophically: some of them even humorously, "Doubtless we shall be told presently," remarks the Detroit Journal," that Austria had to be chloroformed or hypnotized before she undertook the round robin for intervention," and "it remains now for Spain to deny that she ever had a war with us; or, if she had, to protest that it was an arrangement between the two countries to get up a little lighting that would give a number of worthy officers in the army and navy a chance for pronotion."

The dispute was started by the British Foreign Office, which stated, in Parliament and later to an Associated Press representative, that Great Britain was approached by another European Power, when our war with Spain was imminent, with a proposition "to send a collective note to the United States, the purport of which, however polite the wording, must naturally have been that of a threat." Great Britain, the Foreign Office official continued, had "every reason to believe that this Power was merely put forward as a sort of buffer, in order to sound us, and that France, Germany, and Russia were behind her." It is generally assumed that this unnamed Power, which was thus to act simultaneously as a buffer and a lead-line, was Austria, and reports from Vienna say that Austria did take the initiative in the peace movement, on account of the relationship between the Austrian and Spanish dynasties, but not with any unfriendly intentions toward the United States. This movement toward a remonstrance, according to the British statement, was abruptly stopped by Great Britain, which "deliberately put down her foot" upon the enterprise. The British insinuations in regard to France, Germany, and Russia have brought out prompt denials. Germany, according to a statement from its Foreign Office, "maintnined a negative attitude toward such suggestions [of intervention], and made known its negative standpoint whenever occasion offered." France, we are told officially, "did not back up the proposal" referred to, and "took no initiative in any suggestion tending to put pressure on the United States, nor at any time encouraged Spain to resistance." Her "attitude throughout was friendly to the United States as well as to Spain, her ardent desire being to avert war." Russia, which has always claimed to be America's best friend, has not noticed the British insinantion, but the French official quoted above says that while all the Powers were waiting to see what the others would do about the proposition, "Russia clinched the matter by the late Count Muravierl's blunt rejection of the proposal."

Some papers express the belief that Britain's object in stirring up this matter at this time is to arouse ill-feeling between the United States and the continental countries, especially Germany; but if this suspicion is correct, the effort, to judge from the newspaper comment, is not very successful. The Brooklyn Eagle says that "for Austria we have no ill-will." and "her course in the matter was natural, if not commendable," while "for Germany we have a high regard, which is now being intensified by the approaching visit to these shores of a distinguished and accomplished member of her reigning family." The New York Tribune says: "We can not expect all European countries to side with us against one of their own number any more than they can expect us always to side with them against some American state. It would be unreasonable for us to cherish wrath against them for sympathizing with Spain, just as it would be for them to be angry with us for standing by Mexico in 1865-67 and by Venezuela in 1895." "In the light of the despatches from Vienna, Berlin, and Paris," remarks the Baltimore Sun, "there seems to be no ground for the assumption that the United States was in serious danger of being coerced by a European coalition in 1898; and if there was no danger, we are assuredly under no overwhelming obligations to Great Britain for preventing something which would never have happened." "Even if England had done what she claims, and which is very much to be doubted. in view of all the statements," thinks the Pittsburg Dispatch. "Americans have surely been told of it often enough; Russia has not continually cast up to us what she did for the Union during the War of the Rebellion, when England was so ready to assist in the destruction of the republic." One effect of the fling at Russia, in fact, has been to bring back to mind Russia's friendly attitude toward us during the Civil War, in contrast with England's attitude at that time. The Chicago Evening Post says: "We value England's good-will as manifested at that critical juncture, but it is quite likely that we had two friends among the nations, and that Russia was the other. This discovery could but gratify us, and it would be perfectly consistent with Russia's earlier services to and friendship for the United States." And the Providence Journal observes: "Americans should not enlarge too much upon international friends and focs in an invidious spirit, but we have not forgotten that France was our friend in the Revolution; we know that neither France nor Great Britain was our friend in the Civil War; we may recall pleasurably that Russia played us a good turn in that struggle; and, as we extend our thanks to England for standing by us in 1808, we must, until M. Hanotaux's contention is disproved, bear in mind that Russia, also, refused to take the side of Spain." Great Britain comes in too, however, for a share of the bouquets. The Chicago News recalls the spirit shown by the British admiral in Manila Bay in the spring and summer of 1898, and the New York Mail and Express says that Great Britain's service to us in the Spanish war "was certainly rendered "

#### INTERNATIONAL AMENITIES IN CARTOON.

and was "real and ungradging." and adds that our people do not forget such things.

The Pittsburg Gazette says :

"It does not matter so much to us what the disposition of Europe was, so much as what the disposition of Europe is. All the nations of Europe are now anxious for American friendship, not for the benefits they may confer on us, but because our good-will is a valuable asset. International relations, so far as the men who have the star parts are concerned, are essentially commereial. International friendships are for value received or hoped 'To him that hath shall be given,' and the nation that has nothing is in danger of having taken away from it even that which it has. The quarrel as to who was our first friend and who is our best friend in Europe is a strictly European quarrel in which it is not necessary for the United States to mix. We are glad to have the nations of the earth competing for our friendship, but we have no need to pick a winner, even if we do remember with pleasure many of the courtesies of England during our war with Spain, and while we give a glad welcome to the brother of the Kaiser when he comes as the incarnation of German goodwill '

# GENERAL BELL'S RECONCENTRADO POLICY.

SOME vigorous protests and rather coustic criticism greet the news that Brig.-Gen. James F. Bell has adopted the reconcentration policy in Batangas province in Luzon. The New York Evening Post suggests that we wire an apology to General Weyler, and the Diario de la Marina (Havana) remarks: "How scandalized were the Americans and the English over all that happened in Cuba, and particularly over the reconcentration system under Weyler! How humane, how charitable, how sensitive were those Anglo-Saxons! And what savages, what barbarians, what cruel beasts we Latins were! O you hypocrites!" The Philadelphia Ledger (Ind. Rep.) asks: "Who would have supposed on the 6th of December, 1897, when President McKinley stated in a formal message to Congress, that 'the erucl policy of concentration pursued by Weyler in Cuba ' was not civilized warfare, that the same policy would be, only four years later, adopted and pursued as the policy of the United States in the Philippines? Time does truly work wonders; but when or where has it worked a greater wonder than this?"

Two papers that have supported the Republican expansion policy right along are the Baltimore American and the Detroit

Journal. But this latest news seems to be too much for them.

The American says:

"And now we have come to it. With what astonishment do we read that a general of our army in the far-off Philippines has actually aped. Weyler and Ritcheuer? Here in this country, where we have held our heads so high and so prized the commitment showered upon us for our ministrations to a suffering hamilty, we have actually come to do the thing we went to war to banish. Our good name is dearer than all the islands of the sea. In the name of all that is best in our humanity, civilization, and patriotism, let the Government at Washington erase this stain before I becomes fixed and inerasable."

The Journal goes still further. It says:

"The acknowledged failure of eivil government in Batangas must give us pause. When is the war in even Luson to early When are the natives to become convinced that resistance is fully When, supposing they become convinced, are their protestations of loyalty to be depended on? When, in short, is the policy of force to win us the respect and affection of a people who are saying almost unanimously that they do not like us and our ways and that they whis to be left to themselves?

"Supposing we have the Filipinos conquered, what then? Charles Francis Adams recently made the point that the history of the world can be searched in vain for an example of a people raised to the standard necessary for self-government under tutelings of a foreign nation. India would be less able to govern itself now than it was a century ago. The Enst Indian is still a world. In the most precious attributes of citizenship, such as we pride ourselves on and for the use of which we fought, he is worse off than ever.

"Can we reap from the seed we are sowing in the Philippines such a growth as Mexico, returned by us to its people after capture, affords of national development by our example—not by our force? That is the question, and it is important to have it answered."

General Bell finds a defender, however, in the Boston fournal, which says:

"The word \*reconcentrado\* has an ugly sound in American ears, but, after all, the question of whether it is a harsh mericand or not depends upon the way in which it is enforced. The hardship to the Flipinos of Batangas is not in the mere leaving of their homes, which are structures of straw and branches, only a fittle more elaborate than Indian wigwams. They can endure that, and perhaps profit by compulsory removal from abodes that long use and neglect have made unwholesome.

"If the people are well fed and comfortably housed, and if they

have good medical attendance, it is probable that these Filiphose will live just as comfortably as at home, and be even more exempt from dendly maladies. General Chaffee is not a Weyler on a Kitchener. He is a better soldier, but, like Lawton before him, he is a man of great, warm heart. When he has collected the Matangas peasantry about his garrison towns he will see that they are fed and shelrered according to American ideas, which means that in large proportion of these people will be better off thau they ever have been in their lives. The only harshness the state of the proposed of the second proposed in the securingly inevenible.

"Over nine-tenths of the surface of the Philippine archipelago tranquility prevails, and Americans and natives are working harmoniously together. In the truculent one-tenth—in Butangas Province, Samar, Leyte, and in one or two districts between the still lingers a guerilla warfare like that which plaqued our border States for some months after the Confectal earmies had surrendered. General Bell is applying in Batangas the same General Order too which was enforced in the Civil war in the United States. He is treating the guerillas exactly as Lincoln and Grant treated them. It is a species of surgive which will have the certain effect of preventing far more suffering that it temporarily causes."

#### PUBLIC SENTIMENT ON AID TO CUBA.

JERY few newspapers are opposing the recommendation made by President Rossevelt, Secretary Root, and General Wood that Cuban sugar and tobacco be admitted free or at a reduced tariff rate. Yet it is considered doubtful if Congress will do anything for the island. The proposed tariff reduction is resisted by the sugar journals, by the New York Press, the most uncompromising protectionist paper in the country, and by some of the papers published in the cane and beet sugar regions of Louisiana, Michigan, the Pacific coast, and Hawari. The New Orleans Picarune (Dem.) and Times-Democrat (Dem.) stand with the San Francisco Call (Rep.) and Chronicle (Rep.) in resisting any tariff reduction that may injure the American sugar industry. The Seattle Post-Intelligencer (Rep.) declares that "the appends for the free entry of Cuban sugar are largely made upon sentimental grounds," and considers the proposition a doubtful one. The Detroit Journal (Rep.) says:

"Why, for the sake of the Cuban, with the fruits of perpetual summer and the richest known soil always around him, should the beet-sugar grower be the only giver of clarity? It is more blessed to give than to receive. True. But being more blessed, why be selfish in dispensing the blessing? Why not permit the people of the United States as a whole to give? We have an immense surplus in the treasury that was restented by war taxes, the relief of Cuba being included in one of the war musuiter. If the Cubau cannessing grower is flying the signal of real distress, let us take from that surplus, already collected of the people, and give to him as he needs. Du't narrow the privilege of giving, or bring suffering on just one industry at home, for the benefit of a like industry in a forespin land."

The Honolulu Evening Bulletin says

"Hawaii contemplates Cuban reciprocity with much the same feeling that it would a threatening vandal borde aiming to rob its people of their earnings, their sources of livelihood, and make of their productive fields a barren waste."

On Cuba's side is a long array of influential journals. Ex President Cleveland is out, too, with a strong letter in favor of Cuban reciprocity, a letter that brings out the remark, however, that the ex-President's hammer and tongs way of going at things has sometimes hurt the causes he has tried to help. The New York Tribune, a protectionist journal of high rank, declares that "there is really no logical ground for opposition to the proposed reciprocity"; and the New York Sun (Rep.) says that the policy is "demanded by fair dealing as well as by common sense," "We do not see," remarks the New York Times (Ind.). "how any honorable American can reject this appeal," and the New York Commercial Advertiser (Rep.) takes a similar view, The New York World (Ind. Dem.) thinks we ought not to allow this policy to be obstructed by "n mere handful of protected beetgrowers and cane-growers, who care nothing for Cuba, nothing for the millions of American sugar consumers, nor for anything else but 'their own pockets all the time.' " And the New York Mail and Express (Rep.) says:

"Cuba would simply be taken into our range of protection without brenking it down, and intil that island and the United States, with its dependences, produced all the sugar our market would take, the protective barrier would remain unimpiried. If anybody suffered, it would be the foreign sugar-makers, upon whom we now partly depend for our supply:

The view of these papers is that if we deny help to Cuba, the island will be prostrated linearially, and disorder may follow; while if we grant a reduction in tariaf, the island will be saved from ruin, and our domestic sugar industry will not be hurt. Little more than one-third of the sugar we use is grown in this country; the rest must come from abroad, more than half of it from Cuba, and it is argued that the admission of the Cuban sugar at a reduced rate will not hurt the home industry. "A Cuba prostrated commercially by our restretions, despondent and in a mood akin to desperation," says the Boston Transcript (Rep.) "might become a Philippine problem right at our doors, with all

NEAR THE END.

-The New York Herald.

FREE TO DO WHAT?

-The Detroit News.

its ugliness and all its vexations." "There is no good economic reason, present or prospective, why the Cubans should not be favored," thinks the Chicago Record-Herald (Ind. Rep.), and the Chicago Tribune says of our sugar-growers that "nothing but an insaue, short-sighted selfishness induces them to take the unjust and immoral stand they do concerning this question," The Chicago News (Ind.) believes that the same sentiments that prompted us to give Cuba freedom should now prompt us to give her fair dealing, and the Chicago Evening Post thinks we can better afford to bear the war taxes a little longer than to refuse help to Cuba. The Philadelphia Ledger (Ind. Rep.) remarks that "when Congressmen say that they are uncertain or undecided whether they shall make any concessions to Cuba they may represent one or two home interests, but it is doubtful if they represent their constituents or their country." "By treating the Cubans properly, we shall derive as much from them as they from us." thinks the Washington Star (Ind.); and the Detroit News (Ind.) says: "The sugar interests in the United States must quit sentimental talk. They must drop the bogieman and come down to business, just the same as the growers of wheat, apples, potatoes, and fruit have done. They are entitled to reasonable protection, but they must not forget that the consumers, who number 1,000 to 1 against the producers of sugar, have some rights."

A Cuban view of the matter may be seen in the following comment by La Lucha (Ilavana);

"What will be the use of having given us Don Tomas as president if he is to come to rule over an island which will be bankrupt? Don Tomas, as he is the choice of the American Government, should be an excellent man, but he will be unable to do anything useful if he is without money.

"Of what use would all the freedom imaginable be to Cuba without the means to live? . . . . . .

"There would be a certain element of comicality that Cuba, after all that has happened here, after all the talk of bumanity and heroism, should be worse off under the Cuban flag and the protectorate of the United States than under the rejected flag of Snain.

"No doubt Spanish methods were old and unprogressive, but when those who are never content and never will be under any régime are eliminated, it has to be admitted that the majority, and among them the better and more industrious people of the island, were content enough not to prefer putting the whole machine out of joint in order to try to attain the ideal of the minority.

"The alternative was forced upon them, however, probably it had to come, and if it does not bring increased prosperity, the labor and sacrifice and the sentiment will have been in vain."

Prince Henry and the Anarchists,—The Anarchist, pages, aspecially Free Society, of Chieago, and Freided, of New York, have recently published threats against Prince Henry, who is to visit this country. Freided, in one of its late issues, publishes a page of denunciation of the Prince, the language of which, according to the Battimore American, "is of wulgar character and is of a kind that night lead a weak-misdefellow to consider it his duty to do harm to the royal visitor." The Brookly Earcle suws:

"What these madmen and idlots in Chicage expect to accomplish in an attack on the German Prince is not worth going into, for they know less than any one else; but the fact that they are inciting violence justifies a close watch of them, and to seclude them in jails during the royal visit would be only a sensible measure of protection. It is, to be sure, a satisfaction to know that there is not an American in the whole band, yet if the Prince were to be hurt while in this control, and instead of being fewered the friction that has from time to time here manifest between this country and Germany would be increased. But on such attack must be made. Chicago will be held accountable for every untoward act and utterance of the wrongheads whom it shelters, and if it becomes necessary to put every one of them behind the bars while the Prince is inspecting the stock yards, the sausage factories, the post-office, the sewer, and the other beauties in the metropolis of the Middle West, let them be placed there."

#### THE DEMOCRATIC PHILIPPINE PROGRAM.

INTEREST in the Philippine problem has been revived by the speech of President Schurman it Boston, in which be comes out for Philippine independence; by the report that General Bell has adopted reconcentration methods in Batangas province; and by the formulation of a definite Philippine program by the Democratic members of the Senate. Dr. Schurman, who, it will be remembered, was president of the first Philippine commission, said that "President Roosevelt really means that the Filippinos shall have such independence as the American people have," and he said that he saw "no other course but grown liberty, culminating in independence." The program of the Democratic Senators is in the form of an amendment to the Philippine revenue hill. They move to strike out all after the enacting clause, and substitute the following:

"(1) That the United States relinquish all claim to sovereignty over the Philippines, 'subject to the provisions hereinafter set forth.'

"(2) That from and after the passage of this act the Philippine Islauds shall be foreign territory, and all goods entering the United States therefrom shall be subject to the same duties, customs, and imposts as are now or may be hereafter prescribed by law for goods entered from other foreign countries; provided, that during the temporary occupation of the islands all trade between them and the United States shall be from

"(3) That the United States shall continue to occupy the archieago until the Filipinos have formed for themselves a stable government, and until sufficient guarantees have been obtained for the performance of our treary obligations with Spain, and for the safety of those inhabitants who have adhered to the United Vivo.

"(4) That as soon as these results have been accomplished, it is declared to be the purpose of the United States to withdraw from the Philippines, and leave the government, control, and sovereignty thereof to the inhabitants, retaining only such military, naval, and coaling-stations as may be designated by the Government of the United States."

Most of the Democratic and anti-expansionist papers accept these resolutions as "American, just, and expedient," as the Pritisburg Post calls them; but there is little or no argument on the matter that is new. The New Orleans Times-Democrat says:

"This announced policy will recommend itself not only as true Democracy and genuine Americanism, but as wise and proper overy respect, for no one has shown the slightest reason why the Flippinos should receive different treatment from the Cuban. On the contrary, it would seem that the reasons for our relinquishing control of the archipelago are stronger than those quishing the Cubans independence. The Philippines are farther away, more difficult to control, having little communication with us, whereas Cuba is commercially a part of this country; and the fact that the natives are of an alien and inferior race renders any amalgamation or assimilation impossible, whereas most of the Cubans are Aryans, like us."

A number of Democratic papers, such as the New York Journal, the Atlanta Constitution, and the Louisville Courser's ponal, look upon our retention of the Philippines without disfavor. The Courier-Journal thinks there can be no question that civiliaction will be the gainer as the result of our expansion policy. It says: "We have the Philippines with us for good, as a matter of fact, and nothing that Mr. Hoar and all the others who challenge our occupation of the islands can say or do will alter that essential position. Nor can any question the good that has been done wherever Anglo-Saxon civilization has extended."

### CANAL ROUTES AND CONFUSING NEWS-PAPER ADVICE.

SELDOM have the newspapers of this country entertained such a bewilderingly varied assortment of opinions on any great public topic as they now display on the question of a route for the isthmian canal. About the only proposition that seems too preposterous to get the support of any paper is the "Darien ronte," with a tunnel six or seven miles long through the Andes Mountains, the ships to be towed through by an electric trolley arrangement. To believe some papers, the Nicaraguan route is too long and tortuous, and is subject to terrible earthquakes and volcanic eruptions; to believe others, the adoption of the Panama route would involve us in financial tangles with France. the soil along the route will not hold water, and the fierce revolutionists will expose the ships to constant danger. We are warned, on the one hand, that if we build the canal across Nicaragua. France will build a shorter one across Panama, and steal all the traffic; on the other hand, we are told that if we build across Panama, some other Power will build across Nicaragua. and thus have a line of communication nearer the United States than ours, which, we are told, would be fatul in war. In this dilemma a number of papers urge that Congress appropriate the money for a canal, and leave the choice of route to the President ; while others are willing to wait a year or more while the whole subject of route is investigated again. Still other papers are driven to despair, and are doubting if Congress will reach any conclusion this session. "There seems now no prospect of any action by Congress during the present session toward definite canal legislation," thinks the New Orleans Picayune (Dem.), "and the matter may be considered as dormant if not dead for the present." And the Jacksonville Times-Union (Dem.) says: "It would really seem that we must have a Democratic Administration before we can dig the canal." A few papers oppose the entire canal project.

A good deal of this confusion seems to have been caused by the offer of the Panama Company to sell out for \$40,000,000, and by the unanimous opinion of the canal commission that, at his price, the Panama ronte is "the most practicable and feasible."

WESTERN HEMISPHERE: "It's queer how much trouble those fellows are baving about where that part in my hair shall be!"

— The Minneapolis Times.

A careful examination of the press comment seems to show that many more papers now favor the Panama route than favor the one across Nicaragua, altho a still larger number do not declare outspokenly for either. "No interocentic canal is possible in Nicaragua that will suit the purposes of commerce." declares the Baltimore American, and "any canal built there for such purposes would cost an amount of money surpassing the wildest dreams of the most reckless speculator on earth." The Hardrot Times 1892 similarly: "The absurdity of pushing giant occan steamers 187 miles 'across lots' between two occans, through a narrow and sitmous waterway with nine locks, is so absurd from a commercial point of view with nine locks, is so absurd from a commercial point of view

that it ought to be laughed out of the halls of Congress." And the Nashville American believes that the adoption of the Nicaraguan ronte would have been "a colossal blunder, one that might have led to the expenditure of untold millions and the eventual loss of every dollar of it by the completion of the Panama route by France or some other European Power," Some of the other papers that favor the Panama York Evening Post.

favor the Panama
route are the New Chairman of the Senate Committee on Intervork Evening Post,

Nearagua route.

the Boston Herald, the Philadelphia Times, the Pittsburg Dispatch, the Chicago Evening Post, the New Orleans Times-Democrat, and the St. Paul Pinneer Press.

The New York Journal is strenuously opposed to buying the "Panama muddle," It remarks:

"Therefore, while the essential thing is to have a eanal SOME-WHERE, the only plan that promises a certainty of having it ANYWHERE is to dig it at Nicaragna. And if the Adminitration did not think so, why was it so anxious to conclude the Hay-Pauncefoet treaty?"

The Chronicle, of San Francisco, a city that is vitally interested in the question, declares that the canal commission's recommendation "should have no weight;" and goes on to say:

"The interests of Pacific ports and the Mississippi valley demand the Nicaragua route, and the interests of the entire United States demand it, for on coastwise trade the Nicaragua route is shorter even for Atlantic parts. The coastwise trade is the trade whose interests should control, and the Nicaragua route should be chosen even if it will tend to build up the foreign commerce of New Orleans and Galveston. Nobody is in a position to say that a half-century hence the United States will be able or desire to prevent a European Power from building a second canal at Nicaragua. It is certain that Nicaragua will at any time consent to the enterprise, and that within fifty years there will be European Powers with money to build the canal if military reasons require it, and a war to prevent its construction will cost more than the profits of half a dozen canals. These are the controlling factors in the case, and should determine the location regardless of any other considerations whatever. It is not a case where expert advice is required. Experts are always controlled by considerations pertaining to their profession. An engineer will prefer the route which presents the most interesting engineering problems.

"Let no one imagine that the interests of the people are paramount at Washington. We do not mean that the majority of Congressmen are not honest, for they are. Private interests, however, are on the spot to deceive with one-sided views backed up by 'expert advice.' In this way Congressmen are misled. The mere putting off of the beginning of the work which is involved even in negotiations with Colombia will well pay the transcontinental roads for their expense in belping Panama."

"Let the President select the route, now that expert investigation has accumulated all the facts, "says the Pittaburg Chronicle-Telegraph," and the Boston Advertiser thinks that "it stands to reason that a better bargain can be made by leaving the Presiident free to deal with the Neurargan people, or with the Panan people, at his discretion, than by tying his hands in advance by a snap judgment and a hard-and-fast decision on the part of Congress." The Philadelphia Press expresses a like opinion, and the Atlanta Constitution (which schlorn agrees with The Press on any topic believes that Congress should devolve the details of the canal's "location, control, and completion upon the Pressident, or upon a commission to be named by him."

The Chicago Area, the New York World, the Kansas Cily Journal, the Brooklyn Nandard-Union, and the Miwankee Journal think that it will be letter to go slow and start right when we do start, than to blunder by too much haste. "The important thing in such a stupendous undertaking," says The Nandard-Union, "is to decide and start right. An additional vear's delay is a small matter in comparison.

# BRUSQUE MANNERS AT THE WHITE HOUSE, AND MARTIN DOOLEY.

HERE has been a noticeable change in the White House anecdotes told by the Washington correspondents since the President's famous interview with General Miles and the press criticisms on it. Before that time we were told of a Supreme Court justice who went to see the President about a position for his son, and who was told in a tone of voice heard by everybody around that his son must prove his fitness for the place just as anybody else must. We were told of a Senator who called to see about the retention of one of his friends in office. and who prefaced his remarks by saying that he had the man's resignation in his pocket. The President, it was said, interrupted the Senator with the remark that he was glad to hear it, and with a direction to Secretary Cortelyon to wire his acceptance of the resignation. Then came the public reprimand of the Lieutenant General of the army, which called out some severe comment from the nrmy and navy press and many of the daily papers. Since then, stories of brusque manners at the White House have been noticeably absent, altho none of the correspondents has reported any sharp change in the President's deniennor

"Mr. Dooley" hits off the Miles incident and the President's alleged method of dispensing discipline in part as follows:

"There was me frind, Gin'ral Miles. No more gallant sojier iver dhrew his soord to cut out a pattern I'r a coat thin Gin'ral Miles. He's hunted th' Apachy, th' Sioux, th' Arapaboo, th' Comanchec, th' Congressioni, an other savages in th' plain; he's faced clear han' promotion in ivry form, an' no harm come to him till he wint up th' White House stairs, or maybe 'twas till he come down. Amylow, Gin'ral Miles was pursoon' th' thrue coorso in a nachral warryor an' enlightenin' th' wurruld on th' things he happened to think iv.

"Twas that got him into throuble. Wan day afther inspicial," army, Gir'at Miles gave a chat to wan vin his fav'rile journals on what he thought about th' navy, him bein' a great authority on navy affairs befure steam come in. I don't know what th' divvle he said, an' I don't care, I'r me mind was made up long ago, an' ivrybody that don't agree with me is a yether a

Schley man, or a Sampson man an' little betther thin a thrasicor or a cow'rd, at that. But annyhow be give his opinyion, an' afther givin' it he got his bonnet out, had a goold beater in to its up th' epylexe, got th' iliterhic lights goin' in th' buttons, found th' right pair iv ibuo an' pink pants, pulled on th' shoes with it' silver bells, haruessed to his manly high th' soord with th' forget me-nots on th' handle, an' pranced over to th' White House. As he wint up th' hall he noticed an atmospher iv what Hogan calls cold hatoor, f'r wan iv th' durekeepers said it' Prisidint want' home an' another lightly kicked him as he passed, but like a sojer he wint on to th' east room where Mr. Rosenfelt, th' pa-apers tells me, shited in front it th' frieplace.

A NEW PAINTING OF PRISIDENT RODSEVELT, by Constantin Makowsky, the Russian Court painter. The painting is now on exhibition in New York, and is the personal property of the President.

nervously pluckin' Sicrety Gage be th' beard, 'I've come,' says Gin'ral Miles, 'to pay me rayspicts to th' head iv th' naytion. 'Thank ve,' says th' Prisidint, 'I'll do th' same f'r th' bead iv th' army,' he says, bouncin' a coal scuttle on th' vethran's helmet. 'Gin'ral, I don't like ye'er recent conduct.' he says, sindin' th' right to th' pint iv th' jaw. 'Ye've been in th' army forty years, 'he says, pushin' his head into th' grate, 'an' ye shad know that an officer who criticizes his fellow officers, save in th' reg'lar way, that is to say in a round robin, is guilty iv I dinnaw what,' he says, feedin' him with his soord, 'I am foorced to administher ye a severe reproof,' he says, 'Is that what this is? ' says Gin'ral Miles, 'It is,' says th' Prisidint. 'I thought it was capital punishmint," says Gin'ral Miles as he wint out through th' window pursooed be a chandelier. His nex' article will be entitled 'Hosnital Sketches,' an' I updherstand he's dictatin' a few remarks to his nurse on providin' atthractive suits iv steel plate f'r gin'rals in th' army.

"Well, sir, they'll be greeat times down there f'r a few years. A movement is on foot f'r to establish an emergency hospital f'r office-holders an' politicians acrost th' sthreet fr'm th' White House where they can be threated f'r infractions by th' Civil

Sarvice law followed be pers'nal injuries. I'll be watchin' th' pa-apers ivry mornin', 'Rayciption at th' White House, Among th' casulties was so-an'-so. 'Th' Prisidint was in a happy mood. He administered a stingin' rebuke to th' Chief Justice iv th' Supreme Coort, a left hook to eye. Sinitor Hanna was prisint walkin' with a stick. Th' Prisidint approached him gaily an' asked him about his leg. 'Tis gettin' bettler,' says th' stuitor.
'That's good,' says th' Prisidint. 'Come again whin it is intirely well an' we'll talk over that appintment, he says. Th' afthernoon was enlivened be th' appearance iv a Southern Congressman askin' f'r a foorth-class post-office. Th' Prisidint hardly missed him be more thin a foot at th' gate, but th' Congressman bein' formerly wan iv Mosby's guerrillas escaped, to th' gr-reat chagrin iv Mr. Rosenfelt, who remarked on his return that life at th' White House was very confinin', 'I will niver be able to enfoorce th' civil sarvice law till I take more exercise," he said heartily. Th' ambulance was at th' dure promptly at five, but no important business havin' been thransacted nearly all th' Cabinet was able to walk to their homes."

### DO WE WANT THE DANISH WEST INDIES?

THE sentiment of most of the papers on the proposed purchase of the Danish West Indies seems to be, as the New York Press pursit, that "we do not want the group, but we can not let it go anywhere else, particularly to Germany, whither it was pretty certain to go ere long." The treaty for the purchase of the islands was signed last week in Washington, but the purchase will not be complete until the Senate ratifies the treaty, Congress appropriates the necessary \$4.50.000 or \$5.000.000, the islandsers vote for the transfer, and the Danish Rigsdag adds that anxious for annexation," says the Washington Noter, "and while there is an opposition, it apparently is not of such strength as to cause the United States any difficulty when the time comes for the change of sovereignty." Says the New York Tribune.

"With the acquisition of the Danish islands all lands this side of the Angede Passage will become either American or British, or else independent. Only the lesser Antiles and the Spanish Leward Isles will remain under more mixed ownership. And indeed the only other flags upon them are those of France and Holland, lands which are and are likely ever to be our freeze and Thus the problems of mixed sovereignties in the West Indies are gradually and most amicably being worked out to satisfactory solutions, with the Stars and Stripes becoming steadily more consciousus in those regions."

The New York Journal says:

"When we get them, no doubt we shall make them a useful naval base. They will constitute our farthest outpost in the Atlantic—as far east of Key West as New York is east of the Mississippi. They will command the entrance to the isthmian canal, whether it be at Nicarayus or at Panama.

canal, wetterer it or at Neurogus of at radiation.

"We can make them prosperous, too. These tiny specks of land with their few thousand people can produce so little sugar and tobacco that even our ravenous proceeds interests can hardly seem that the seem of the seem of

"But we shall welcome the Danish West Indies and do onr best to make them so happy that all their neighbors in those sapphire seas will want to follow their example."

But the islanders will find that their welcome is not nnanimous. "If the purchase should be consummated," says the Philadelphia Ledger, "another Pandora's box of troubles will be opened, for all of the islands of the West Indies that are not helped by their home governments are in trouble." The chief product is cannesugar, and much of the market has been destroyed by European beet-sugar bounties. The New York Evening Post remarks:

"The islands are desperately poor. Those for which we are now asked to give \$4,500,000 of good money would not be accepted as a free gift if the Senators who have to vote upon the treaty should visit them in person. They will simply bring us new responsibilities and new expenses. Every argument that caused the rejection of the Seward treaty in 1867 remains in full force to-day, while the one argument in facror of it—that we were without any naval station in those waters—has ceased to have force since we have acquired Porto Kico."

# LETTERS AND ART.

# IS THE LOVE-MOTIVE TOO PROMINENT IN FICTION?

THE love-story has so completely dominated the romantic literature of every age and to-day occupies so high a place in popular regard that few are bold enough to challenge its supremacy. Mr. Howells is one of the few, and Mr. Julian Hawtonne gives currency to the views of another, a friend, not named, who insists that the love-story has been decidedly "overdone," a view with which Mr. Hawthorne himself coincides in the main. He writes in The Hooklover's Weekly (Philadelphia, January 27), as follows:

"A highly intelligent person with whom I talked the other day told me that he sincerely deprecated the prevalence of lovestories in the present era. I may as well mention that he is no crusty bachelor, but a man happily married, with a delightful family around him. 'It is altogether out of nature,' said he. 'Love comes to every normal human being, no doubt; he man ries the girl, and they live with their share of felicity, have children, and entertain their friends. But that is the whole matter, so far as love is concerned. The man, being now a full man, begins his struggle and commerce with life and the world. He has disposed of preliminaries, and takes up the real purpose and interests of his existence. But were we to credit the story-books, love is first and last and the whole thing. It molds all careers from start to finish. The entire tale is occupied with the more or less thwarted efforts of the lover to win his beloved; and when he has done it, or failed to do it, if the tale be a tragedy, the writer conceives himself to have finished his task, and writes finis at the bottom of the page. It is preposterous! What manner of world would this be in which we live and labor, were such the truth? There might be some poetry left, perhaps, tho hardly the highest; but there would be no presses to print it on, no paper and binding, no book-sellers, and no means of livelihood, therefore, for the poet. There would be no science, invention, discovery, politics, or philosophy-except the philosophy needed to help a man to carry on when all stimulus to live and work had been removed, and he was reduced to the extremity of sitting down and contemplating the partner to whom he was yoked. I atterly deny that the love of man for woman is the whole of life, or even any part of life in its fuller sense. How story-tellers came to agree that they would pretend it is, is more than I can imagine; I suppose it must be sheer failure of knowledge and invention. This is the more probable because all lovestories are radically alike; no sooner have you begun to read one than you know, apart from certain arbitrary details, just how it is to proceed and to come out. Nowadays, in our desperation, we are resorting to illicit passion to vary the monotony; but the monotony was preferable. So I say, let the story-tellers henceforth go back to old Homer and Virgil, to the Arabian Nights, to Don Quixote and Gil Blas, to Robinson Crusoe (God bless him !), even to good old Captain Marryat and Mayne Reid, and to Treasure Island, and to the early productions of Rider Haggard and Conan Doyle. Did you ever read 'The Adventures of a Younger Son,' by Trelawney?-the same who afterward wrote another of the most readable books in the world, 'Records of Byron, Shelley, and the Author.' What have you to say of that unique series of adventure tales by George Borrow; is there anything better in modern literature?-and yet there is not a page of love-making in the whole of them. I don't mean to assert, of course, that a good story with love as its burden may not be and has not been written; love serves as a theme once in a way well enough. So is breakfast a good and interesting thing in the daily rontine; but do we wish to keep at breakfast from morning till night? Our important experiences, as a rule, come after the breakfast things have been cleared away. Besides, I maintain that not only is it against nature to make love the whole thing, but the telling of the facts, or alleged facts, of a love affair is intrinsically unnatural and indecent. People don't do it in real life; what would you think of me, were I to hold you down in that chair while I discovered to you all the details of my youthful passion for my excellent wife? Do you imagine she would ever permit me to invite you to dinner again? No gentleman would ever dream of making such disclosures; and, even if he did, he would be prevented by the circumstances of the case; how could be recall the embraces, the avowals of affection, the silly chatter in the garden path or in the set of Lancers, what he said, has the said, how the time came when neither could say anything except by the burning glauces of devotion unuterable?—and yet such rubbish, which neither you nor I could possibly recall from our niviaxe sperience, if we would, forms the bulk of your convertises to the properties of the second properties of the second

Mr. Hawthorne thinks that the conclusions of his friend are eminently reasonable. "Love-stories," he says, "meaning tales of courtship, are altogether too numerous; it would be a beneficent improvement to write stories of nuarriage—of the influence of the married state in making or marring, as the case might be, the parties to it. We have not sufficiently considered in literature the nature of marriage as a factor in clittenship; the real citizen is not the man or the woman, but both together," Mr. Hawthorne concludes as follows:

"Yet, protest as we may, the love-story in its present form must remain and never can be dispensed with, for a reason which every poet feels, tho my friend above quoted did not take it into consideration. Love belongs to youth; and mankind, male and female, is spiritually and eternally young. The illusion of age is produced solely by the imperfection of material conditions; it is no essential or permanent feature of our nature. In the spiritual state hereafter we shall recover from the earthly disease or disability and be forever in the prime and glory of our youth. Love, in its infinite aspects, will then avouch itself as the complete and sufficient end and aim of humanity, which is the creature of Love eternal and infinite. This truth the poet divines, and it warrants his poem throughout the ages. And the other men who are not consciously poets, like my friend, may temporarily ignore it, it abides in the bottom of the heart just the same, and will discover itself in due season. Altho many or most lovestories written nowadays are silly and shallow, the ideal lovestory is not only the best thing in literature, but it is in order to tell it that literature exists."

Men of Letters as Athletes .- Probably no other words in Rudyard Kipling's much-criticized new poem, "The Islanders," have stirred up so much resentment as have been produced by his scoff at the "flanneled fools at the wicket" and "the muddied oafs at the goals." His fellow literary men have been among the first to take up the cudgels on behalf of athletics, and this fact has led the London correspondent of the New York Herald to call attentiou to the marked athletic proclivities of men of letters. Dr. A. Conan Doyle, as is well known, is a capital cricketer and a member of the Marylebone Cricket Club. Other literary cricketers are Frankfort Moore, J. M. Barrie, A. W. Pinero, Andrew Lang, Stephen Phillips, S. R. Crockett, and Barry Pain. Lawn tennis also demands the use of flannels, and its devotees. which include G. B. Burgin, Robert Hichens, and A. C. Benson, apparently come under Mr. Kipling's condemnation. Football is necessarily the sport of younger men, but Rolf Boldrewood and Coulson Kernahan must be reckoned with the "muddied oafs" of their day. As for golf, its adherents are legion, and include Augustine Birrell, Robert Barr, Egerton Castle, "Ian Maclaren," Dr. Robertson Nicoll, Gilbert Parker, and a host of

There have been many historic cases of athletie men of letters. Lord Byron was a famous swimmer, and Lord Tennyson was, in his youngerdays, noted as a pedestrian. Robert Burns delighted in the sports of his country, and in feats of strength had few equals. Dickens's prediction for long walks is well known, and Charles Kingsley was very handy both with the gloves and with the oar. Edgar Allan Poe was a strong swimmer and jumper. Another American poet, William C. Hvyant, practised gymnastic exercises almost until his death, and in a letter to a friend, written in his seventy-seventh year, speakes of his custom of rising at half-yast five and exercising for a full hour with dumbelles, hock, and horizontal bar.

#### "THE ENGLISH WALT WHITMAN."

WHATEVER be the literary estimate set upon Walt Whinman's work, it can hardly be denied that he has left a vigorous impress upon the life and thought of our time, and that his writings have found a welcome in many countries. In England, Whitman's mantle seems to have fallen on Edward Car-

FUWARU CARPINIER.

penter, a poet and essayist whose writings have much in common with those of his American prototype. William Diack, a writer in *The Westminster Retueto* (December), says of Carpeuter:

"There have not been wanting those who would fain place him on an even higher pedestal than the 'good gray poet' of the West himself. Count Tolstoy, whilst declaring that he 'could make nothing of Walt Whitman,' praises very highly the work of his English disciple. Certain it is that of that peculiar school which Whitman has called into being, Carpenter is now the owned which we have been an experience. It has not his master's blasty and vigorous bow's changing form or the dancing, glistening sunbeam—but still be has inherited a goodly share of his philosophy of life and his manner of presenting it."

Unlike Whitman, Curpenter came from an upper-class environment and had a collegiane clonation. He became a Cambridge University becturer, and for a short time was a clergyman in the Clurch of England. Later, he threw up all these interests, and took to farming life mear Sheffield. It was here that his "free poems," which he wrote for the most part in the open air and which were published, in 1883, under the till "Toward Democracy," took form. In his poetry, declares Mr. Diack, Carpenter "reinearantes himself in every form of life and nature—the waving ferns and the spirit of the trees, the slave and freeman, the realist and idealist; and thus inspired sends forth his message to the world." The writer continues:

"Toward Democracy" consists of one long poem of seventy stanzas and a hundred or more shorter pieces, all, however, blended together by the same spirit of fearless seeking after ruth, and, seemingly, all he outsome of one mighty inspiration. Throughout the work the author speaks as the embodiment of the unfettered soul 'whose body is cost away,' and in that capacity interprets anow the 'meaning of the word democracy' in its bottest and grantlest significance. 'These things, I, writing, the standard of the control of the control of the control of To Carpenter, democracy represents the inward cayression of progressive life as well as its outward development.

"Despite the almost infinite variety of its lights and shadows, one central times soon reveals itself to the sympathetic reader. Whether he speaks of God and religion, of the meaning of hie and death, of freedom and democracy, or of slavery and servitude, he is ever dreaming the dream of 'the soul's slow disentianglement.' This phrase to him sums up the meaning of the word democracy. The story of the travail of the soul of man from bondage to freedom is the story of this poet's book. It follows the fight of humankind through many lands and through has painted complete mastery over himself. 'The three that he interprets the meaning of man's incessant struggle with nature and unfolds the spiritual significance of the latter-day doctrine of evolution or, as he terms it, 'exfoliation '—the growth and un-folding of the human flower.

#### Ages and ages back,

Out of the long grass with infinite pain raising itself into the upright posi-

A creature - forerunner of man-with swift eyes glanced around

No to-day once more, With pain and suffering driven by whatever instinct who can tell? Out of the great jungle of custom and supposed necessity, into a new and

wonderful life, to new and wonderful knowledge, Surpassing words, surpassing all past experience—the Man, the meaning

Uprears himself again."

To Edward Carpenter the "return to nature" is the first great step toward human happiness. Alike in his prose and verse he has proclaimed this conviction. Mr. Diack says:

"La a masterly prose treatise ("Civilitation, Its Canse and Core"). Carpenter traces with graphic pen man's departure from the garden of Nature; forcibly and mt times satirieally sets forth the hollow artificiality of modern life, and points to us the way back to the Paradise of Nature. Audrigel with flaming sword keeps watch and ward o'er the entrance, but this armor is not invulnerable. The angel is a weak and erring mortal, and the flaming sword which he wields so destreously is the last of power and riches. Back to the perennial simplicity of Nature is Carmenter's resounding summons:

Come up into the fragrant woods and walk with me,

The voices of the trees and the silent growing grass and waving ferns ascend:
llevond the birth and death veil of the seasons, they ascend and are born

again;
The voices of human joy and misery, the hidden cry of the heart - they too
ascend into new perpetual birth.

A't is interpreted anew: In man the cataracts descend, and the winds blow, and autumn reddens

and ripens;
And in the wonds a spirit walks, which is not wholly of the wonds,
But which looks out neer the wide earth and draws to theef all men with

But which looks out over the wide earth and draws to itself all men with deep unearthly love: Come, walk with me."

If the essence of all poetry is communion with the "infinite and eternal," as has been said by a modern critic, then, in the opinion of the writer, Whitman and Carpenter must be numbered among the veriest masters of the art of poesy, and if they have been misunderstood, it is because they have had the courage to "break the bonds of conventional verse and leave the tags of true behind them." He concludes:

"Assuredly, these two, Walt Whitman and Edward Carpenter, shall yet stand side by side in the world's great arena of criticism, as two of our latest bards who have proved themselves worthy of the widest acceptation—Whitman, a perennial fount of

life and lordly vigor,—Carpenter, a little lower down, in the ranks of modern teachers, yet filling faithfully and well his own peculiar niche in the great temple of Fame."

# MRS. PATRICK CAMPBELL'S AMERICAN TOUR.

THE advent of Mrs. Patrick Campbell, who has been heralded from London as the peer of Bernhardt and Duse, and is at present playing to crowded houses in the Theater Republic. New York, has aroused keen interest in dramatic circles. Mrs. Campbell is regarded as one of the foromost living exponents of the

psychological " drama, and the plays in which she is appearing are of a striking and unusual kind. They include Sudermann's "Magda." Pinero's "Second Mrs. Tanqueray" and "Notorious Mrs. Ebbsmith," Björnson's "Beyond Human Power," Echegaray's "Mariana," and Maeterlinck's "Pelléas and Mélisande." "The box-office has abandoned the idea that problem plays, and plays that have as motives the analysis of psychic, religious, or ethical phenomena, are not remunerative," says Mrs. Campbell in a newspaper interview; "the public has been educated up to them, and it is good that they can assimilate. It is a mistake to think that Ibsen, Ior instance, is beyond the average intelligence, Personally 1 am a firm believer in the serious drama and in the work of the great psychologists who are writing for the theater of to-day."

The reception accorded to Mrs. Patrick Campbell by the New York dramatic critics is of the most conflicting character, and the press comment upon her art ranges all the way from the highest praise to marked disapproval and belittement. The New York Mail and Eliptest violes as view that is not infrequently beard when it says (editorially) that "New York does not quite understand Mrs. Campbell," and that her "vague, delicate, impressionistic" acting does not appeal with great force to the average American. The Commercial Adverticer says.

"Probably the most intellectual person of prominence now acting on the British stage, she is also a woman whose temperament, appearance, voice,

and manner are all so strange and vivid that they stir up strong and opposite feelings in an audience. The clientèle which Mrs. Campbell has made hers in Loadon is composed in a flattering degree of the intellectual and literary classes. Her hold upon them grows from her gifts as an actress, her holdness and intelligence as a producer of plays which can not have a mob success, and the excellence which she always maintains in her company. . . . Mrs. Campbell's great beauty is, of course, very useful, if not absolutely necessary, in holding the attention, and the strangeness and glamour of her appearance enable her to enforce her meaning with less detail than would be required if she did not appeal so amply to the eye; but these physical gifts are never wrongly depended upon by her; they are always in the service of her artistic nature, which is delicate and penetrating in perception, large and simple in execution, with something haunting in its understanding and simplicity, like the two plays which she uses for mere love of them, 'Beyond Human Power' and 'Pelléas and Mélisande.'

The same paper waxes very enthusiastic over Mrs. Campbell's impersonation of the "Notorious Mrs. Ebbsmith." "A more just and complete gazap of the character," it declares, "in its entirety and in every detail, it would be impossible to conceive." The Timers says, in similar vein, that by her performance in this play Mrs. Campbell "kando 'revealed as an actress whose range is

exceptional and who is not without characteristics which approximate, at least, to greatness, in the best sense of that muchabused term." The Evening Post is more sparing in its commendation.

"Considered as a whole, her performance is strongly confirmatory of the impression created by her Magda, that she is an emtional, rather than an intellectual, actress, that she would be anable to identify herself with any character outside the range of her own instincts and impulses; that her best work must be, terrefore, within rather narrow lines, but that, owing to her strong individuality, sensitive temperament, and superior intelligence, it is apt to be of uncommonly high quality."

Mr. William Winter, of The Tribune, criticizes Mrs. Camp-

bell's art and tendency in his usual vigorous fashion. The English actress 'repertory of plays expecially comes under the ban of his condennation. Such plays, he declares, as the "habefuerous 'Mrs. Tanqueray,' the tainted 'Mrs. Eibsmith,' the ponderous' Beyond Human Power,' and the morbid and excrueiating 'Mariana' may be viewed with favor by a "sickly class of fantantic frividities and degenerates" in London, but they are hardly representative of true dramatic art. He continues:

"Mrs. Campbell is neither esceptional as an actress nor extraordinary as a sonain. Her porfessional equipment, gained in many years of experience, is into deal of the many years of experience, is into the more or less winning charmon and contract of the more or less winning charmon to the proace-lings nor magic in herealt to diversal attention from the excessively lugularious norbid, drift, and sometimes pernicions character of the dramas in which she has chosen to appear; and either to see those plays or to think of them is to suffer.

Is to some companied is an eccentricity, but, in her wife, and processes claims. Her denotement of a wayward, passionate nature, bitterly resented in a wayward, passionate nature, bitterly resented in a nature fact as well as of domestic restrictions and in cynical revolt against social conventionality, is measurably effective, manifesting a true matinct of that lawless freedom which, whether in humanity on nature, when combined with beauty, is always agreeable. . . As acting it is neither great nor in any way exceptional with the companies of the companies of

MRS. PA (RICK CAMPBELL.

# BACON VERSUS SHAKESPEARE, AGAIN.

THE Henley-Stevenson controversy in London has been recently quite eclipsed by the reappearance of an old topic of never-failing interest. Hacon versus Shakespeare. This is a subject which the American reader is impelled to study, if only for putratic reasons: for the Baconian theory was cradled in this country. It ennanated some forty years ago from the fertile thering of Delin Blacon, a St. Louis lady, who ended her days of the truth must be toldy in an insane asylum, and it was developed to its most fantastic conclusions by a Dr. Owen, of Detroit, and by the eccentric and brilliant Ignatius Donnelly. Moreover, the immediate cause of the respenting of the controversy is n book on the "Blitteral Cipher of Sir Francis Bacon," by another American lady, Mrs. Ethabeth! Wells Gallup, of Boston, who has been in England for some time and has made a number of covers to her theories. Says the London If Verley Register:

"The cipher which Mrs. Gallup professes to have found in a large number of books printed during Bacon's lifetime is a 'bilit-

eral 'one described in one of his acknowledged works, and consists of making use of two founts of type in printing a book, the intervals at which the letters of the second occur enabling one, by means of a key, to spell out a message. This cipher has been detected in the 'Advancement of Learning,' too, the 'Novum Organum,' too, in Spenser, Ben Jonson, etc., and, of course, in the unfortunate First Folio of Shakespear. It seems from its revelations that Bacon was the son of Queen Elizabeth by Leicster, to whom she was secretly married; and that he wrote the works of Shakespeare, Greene, Spenser, Peel, Marlowe, and the 'Anatomy of Meliancholy,' "

Mr. Sidney Lee, a well-known English literary scholar, who received a copy of Mrs. Gallup's book and studied it carefully, pronounces "the whole farrago unworthy of serious attention from any but professed students of intellectual aberration"; and one London paper declares that it is difficult to conceive how

SHACON AND BAKESPEARS

HOMEN: "Look here, what does it matter which of you chaps, wrote the other fellow's books? Goodness only knows from many wrote mine!" [Node, as weath, and ext.] - Proceed.

Mrs. Galtup's theories "could be found credible outside of Bedam." In nana quarters, however, the new book is accepted in all seriousness, and its arguments have won favorable commendation from at least one English Inerary man of international reputation—Mr. W. H. Mallock. Mr. Mallock disavows being a complete convert to Mrs. Gallup's point of view, but he contends that her theory is "sufficiently plausible to deserve to have its truth tested," and he sustains this conclusion at some length in the December Nunteenth Century. In a later letter to the London Times, which has been the storm-center of this literary controversy, he says:

"What strikes me principally in this controversy is the odd sentimental acerbity with which the upholders of Shakespeare's authorship receive the arguments of those who presume to entertain a doubt of it. Shakespeare is a figure of interest to us only because we assume him to have written the works that bear his name. What we know of him otherwise tends to quench interest rather than arouse it. What reason is there, other than the most foolish form of school-girl sentiment, for resenting the idea of a transference of our admiration of the author of the plays from a nam who is personally a complete stranger to all of us—orat best and who is personally acomplete stranger to all of us—orat best admirted to be one of the greatest geniuses who have ever appeared at any neriod of the world's history?

Mr. Mallock's espousal to this limited extent of the Baconian side of the argument has had the effect of arousing a most amusing, the decidedly one-sided, discussion in the English journals, in which a share has been taken by Leslie Stephen, Andrew Lang, W. L. Alden, and many other well-known literary men. The London Times devotes a lengthy editorial to the subject,

marshaling all the old reasons for believing that Shakespeare wrote the plays that bear his name. Few of the literary journals take the authject seriously. The London Ontlook refers jeetingly to the "Gallupian assertions," and adds, my steriously: "We be-lieve that if the word 'gallop' (which of course is merely Gallup) be searched out in due order in the First Polio of Shakespeare, and the words immediately preceding and succeeding it be recorded, a most remarkable declaration will come to light. And if 'Miching Malleche' be not W. H. Mallock, My, then, Bacon never worde the plays." "How can we ever speak of 'Bacon's "Misuammer Night's Dream ""' inquires The Academy: "the very resistance of the tongue is argument against this Transatlantic heresy." The same paper quotes the following verses:

Ah mel what a tragic imbrogito,
Produced by a famous first folio.
A mericans swear
That a clopher lies there
To knock Rogitand's Bard towley-powley O1...
Yet Mr. Biographer Lee
Is certain as certain can be,
No mystervi (arks
No mystervi (arks
"A cipher? All moonshine!" says be

Dr. Georg Brandex, the Dauish critic, ascribes the Bacouian "craze" to "feminine criticism on the one hand, with its lack of apristing delicacy." Literature, commenting on this remark, consistention to the fact that "something like two hundred pro-Baconian works have appeared in America, and not far short of a hundred in England," representing "a vast underlying mass of Baconianism among the millions who form a superficially cultured reading public on both sides of the Atlantic."

We're quite in accordance with Lee.

#### THE OUTLOOK FOR THE FRENCH LANGUAGE.

N a recent article in our pages (see THE LITERARY DIGEST. November 23), some interesting facts and figures were presented to show the vitality of the French language in the northern United States and Switzerland. In other countries. however, especially in Belgium and in England, the French language seems to be declining, rather than advancing, and this fact draws many expressions of regret from contemporary French writers. The status of the French tongue in Belgium forms the theme of a recent article in the Revue (Paris), in which it is pointed out that whereas there were recognized in Belgium a few years ago but two lauguages, the French and the Flemish, German has now entered the field as a very formidable rival, and, according to the last government statistics, is now the national Belgian language. French, the old official language, is being more and more completely supplanted by Flemish, and the Belgian Government is making every effort to establish the supremacy of the Flemish tongue.

No less marked is the decline of the Piench language in England,

M. Fernahd Herbert, professor at V. Ecole des Hauirs Etudes

Commerciales, writing on this subject in the same journal, sees
an analogy between conditions in Belgium to-day and those
existing in England four hundred years ago. "The Belgian
Government," he says, "desires to make Flemish the official
language of Belgium; Edward III, was constrained by circumstances to authorize the use of the English tongue in England.
As soon as Flemish shall be decreed the solo official language at
Brussels, the days of French will be numbered. The word 'decadence' is no longer strong enough; it is a question of life or
death."

The writer then dwells on the actual situation in England, and says in substance: Of all the European nations, England cultivates modern languages the least. This is due to the facility of

her own idiom, to the increasing proportion of human beings who speak it, and to her pretension of some day imposing it upon the world as the universal language. For some time past abe has perceived that not France but Germany is her most formidable economic competitor. She has begun to realise the importance of studying foreign tongues, but now finds it more profitable to study German than to study French. Ten years ago the smaller schools of England had a French professor. Vaday he is replaced by a German professor, who teaches what French is required. If a mere accomplishment is desired, the French language is taken up; but if it is a question of usefulness, of fitting a pupil for business, it is German. French literature is being rend less and less in England. Indeed, the 'French novel' has become on English soil almost synonymous with "obserces book" and is read in secret. M. Herbert aver.

"What means shall we take to increase the popularity of the French tongue abroad, and particularly in England? If we think thin the presence of a few thousand French people in England and the publication of a French weekly newspaper in London, which is hardly known to the members of the French colny, will accomplish much in this direction, we are mistaken. Every good Englishman and every American residing in Paris goes regularly every morning to the news-stand to buy his New York, Herath. In London, the Paris mercing papers do not netrage newspapers, the Mathie, for instance, which already enjoys great popularity over there, appear in Loudon at the same time as in Paris? . . . . .

"The commercial utility of the French language is becoming doubtful; doubtful; also, from the point of view of linguistic propaganda, is the efficacy of the universal exhibitions of which we have a monopoly. Our efforts must be directed through the press and the theater, which guide public opinion on the one hand, and divert the masses out he other. [In this connection it is interesting to note that Mr. Charles Frohman, the well-known theatrical manager, has made a proposal to establish a known theatrical manager, has made a proposal to establish a be interest in Paris.—Eutros Latrasav Duorsz.] The technical class, the statistical fecture, are too suggestive of the school-master, and repel. Direct persuasion must give way to indirect methods, which arouse no antagonism."

M. Herbert further elaborates his views in the Keruse dis-Keruser (Paris). He admits that English is likely to be the universal language of the future, and that without a knowledge of English France will find it almost impossible to maintain her commercial position. But is it not possible, he asks, that the English tongue, in becoming the international language of commerce, may concede to the French language the first place in the world of letters and sciences? French, he says, hus had the bonor is the past of being preferred by those who were courteous, polite, and of a diplomatic turn of mind, and if French is being superseded by English in diplomatic circles to-day, it is only because diplomacy is becoming dominated by the commercial spirit.

The writer examines a proposition made by one of his colleagues, M. Michel Breal, who thinks that it would be an easy matter to make the study of English obligatory in all the French schools, provided the English-speaking people would study French. M. Herbert saws:

"This project, under a flattering appearance, conceals the greatest danger to our language that has ever threatened it. In good faith, we shall apply ourselves to the obligatory study of English, and once launched on this path we shall continue to study mechanically, as we have German for thirty years, without knowing whyl. Is it believed that in England and in America, where they profess little taste for languages, they will act with the same good faith toward ours? Is it believed that they will willingly constrain themselves to study French with its capricious syntax, when they know that the English language will be understood by us? The English are too practical, too "matter-of-feat," is they say ronder, to indulge in any sentiment

"The French language not being understood by the English, while the English is understood in France, he foreign studies will derive double advantage in neglecting the study of French in order to devote himself to the study of English, which he will be able to speak fluently in two or three years, thanks to the simple and rational methods long in use in Germany. The entry European countries will reason in the same way. Who then will learn French?

Vet, even the England and America can not be compelled to study French, M. Herbert is in favor of taking measures to familiarise the French with the English tongue. He proposes that the French Minister of War should issue a decree making it compulsory that candidates for Saint Cyr and the Polytechnique should speak nt least one foreign language, preferably English. He continues:

"When German ceases to be obligatory at Saint Cyr, our officers will know German anyway, but—and this is the main point —our exporters will speak English and will make good use of it. Our products will find their way to foreign countries. The adventurns spirit which characterized our fathers will reassert it. self. The hend of the family will not feel anxious about the future of his sons because their native land refuses to give them living. Perhaps, even, the decrease of Premel population may tion. And to think that the secret of all these blessings may be continued in an ordinary decree of the Minister of War!"

Dr. J. P. Mahaffy, in an address in London not long ago before Modern Language Association, dwelt upon what he termed the folly of the attempts being made to stay the departure of decaying tongers, such as Flemish, Gaelic, and Czech. He saw no danger of the disappearance of the French tongue. On the contrary, he expressed his belief that French, German, and English were destined to be the dominant languages of the future, at might be true, he said, that English is becoming the universal language in one sense, but it is equally true that neither of the others is to any great extent giving way to it, and that the alternative for the three countries is a trilingual ideal.—Translations madel for Tile LITERARY DUSSE.

# NOTES.

Literature, the weekly journal published by the London Times, has suspended publication, and is merged with The Academy. In its place The Times is issuing bi-weekly illerary supplements of the same general character as that adopted by the New York Times Saturday Review.

FIGO. NICHOLAS MURRAY BUTLER, the successor of Seth Low as precised net of Columbia Culversity, is the editor of FA Educational Review, of the "Greater Educator Series" and of the Teachers' Professional Library. He was the first president of the New York College for the Training of Teachers, and has been associated with Columbia Culversity for twenty-four years.

THE plays of Oscar Wilde are to be ascribed hereafter only to "the author of "Lady Windermere's Barn." The managers of St. James's Theater, London, in which "The Importance of Belog Karuses," the first of his piays to be performed since his trial, is being produced, state that this was his dying request, "And thus he shall be nameless," comments the Spring-field Republicus.

The Chicago papers have been giving a good deal of space to the achievements of Miss Euretta D. Metcalf, a literary prodigy, who, if the stories that are told about her be true, certainly eclipses previous records in a similar line. Miss Metcalf, it is stated, "composes and writes poems, novels, and magazine articles to her sleep"! The Chicago Xwot declares marked departure from the beasten public of literature.

## SCIENCE AND INVENTION.

#### SOME PECULIAR RESULTS OF WIRELESS TELEGRAPHY.

THE world has scarcely yet had time to consider some of the possible results of long-distance wireless telegraphy. If Mr. Marconi really did receive transatlantic signals, which some experts still doubt, and if he is going to succeed in his attempts to transmit regular intelligible messages, certain things are bound to happen that as yet have hardly been thought of. Mr. C. T. Child presents some of these for our consuderation an article entitled "Some Unconsidered Aspects of Wireless Telegraphy," which be contributes to The Electrical Review January 111. Mr. Child apparently does not credit Mr. Marconi's assertion that he has assured the secrecy of wireless communication by "tuning" receiver to transmitter. He says.

"It seems reasonably safe to assume that we are still without a syntonic system. It this be the case, and a sending-station is erected in Corawall capable of affecting a receiver somewhat more than two thousand minds away, it would affect similar receivers practically all over the continent of Europe, while it would doubtes render wireless telegraphy of any sort in England, the northern half of France, and neighboring regions impossible. The same remarks apply to the stations which may be receted in the maritime provinces of Canada or in eastern Masschusetts. For this reason it would seem that wireless telegraphy, even more than the art of telephony ever was, is a natural monopoly of the first class.

"By natural monopoly is meant that to make such a thing operative it practically must be under such single control that interference will be eliminated. In order to insure such control it is certain that international action of some sort would be requisite, and since the action of any party to such an arrangement coull entirely destroy its usefilness, the value of wireless telegraphy as an adjunct in war, at least for long-distance operations, apparently disappears.

As to the sending of commercial messages by this means, Mr. Child thinks it doubtful if any present opinion is of value, but from the nature of things he counsels us to restrain our enthusiaam somewhat and wait for results. He quotes Professor Ayrich's apt similer of the loud electromagnetic voice calling in the wilderness and the sensitive electrical ear hearing it in the distance, and reminds us that if we can imagine a voice of trans-oceanic capacity roaring in England, the electrical ears of Europo will be more or less deafened. He goes on to say:

"Another consideration that follows from the Cornwall-New-foundlaind experiment is that it is likely that any signaling done anywhere in the world by such sending apparatus would affect safficiently sensitive receivers anywhere else. The old hypothesis that wireless telegraphy signals were due to Hertain waves must evidently be given ny in view of these results, unless it is assumed that the earth is transparent to such waves—a seemingly impossible assumption. Apparently what takes place when a wireless signal is sent is a disturbance of the electrostatic condition of the earth. . . If we make some such assumption as this it is evident enough that we may explain the passage of wireless signals apparently through a done of sac-water about 350 miles high, as in the ense of the Cornwall-Newfoundland experiment.

"If (filis) is true, as it seems to be, then the necessity for a systonic system is even more evident than it was before, and the question of the actual availability and utility of wireless telegraphic methods turns upon the number and diversity of syntonic systems that can be simultaneously installed. In other words, it all turns upon the accuracy of turning which may be possible. Conditions are somewhat as if two pianototes were upon mos. If they were perfectly in time with one another the corresponding note on the other would also sound itself, together with all of its related octaves, fifths, fourths, and other nearby harmonics. If the pianos contained an infinite number of strings, only certain groups under these conditions in the second

instrument would respond. It a system of syntonic transmission should be built upon such an arrangement as this, it is evident that the sending notes of different stations could not be octaves of one another, or lifths of one another, or bear any other simple harmonic relation to one another. The very practical question is, how many different tonalities of sending-stations could operate simultaneously with satisfaction and certainty?

"These are, in trief, some of the first considerations which arise in reviewing the superb work which has been done by Mr. Marconi and his associates, and in considering the results obtained by them with relation to their practical utilization for actual long-distance signaling purposes. It is fortunate that no man can read the future. It is not intended here to cast any aspersion upon this splendid work or to bebrille it in any way. What wriebes to elegraphy actually will do in the future only the future can determine. If it does no more than it already has accomplished, even then it will stand upon the historical records of electricity as one of the most intensiting and autonishing achievements which mark its pages."

#### A MOUNTAIN OF SALT.

THIS marvel, we are told by Lectures pour Tous (December), stands at Cardona, Spain, in the foothills of the Pyrenees, in an inhospitable region, torrid in summer and very odd in winter. It attracts few spectators, for it can be reached only by a journey of twenty-five unlies in a "tartane," or mule-cart.

A MOUNTAIN OF BALT, CARDONA, SPAIN.

Near the salt mountain stands the old fort of Cardona, long reputed one of the strongest in Spain. At its base flows a stream apparently half frozen, but what looks like ice and snow is really salt. Following up the stream through a gorge entirely barren of vegetation, the traveler comes suddenly at a turn in the path upon the salt monutain, which resembles a huge glacier. It is estimated to contain 500,000,000 tons of rock-salt-a statement which may be more interesting if we remember that the neighboring country of France consumes 700,000 tons annually, so that this mountain could supply France with salt for 700 years. The salt mountain is private property and is worked as a mine, but only to a very limited extent. The workmen fashion crosses, flasks, cups, and other objects of fine clear specimens, and sell them to occasional tourists. Of course the rain beating upon the salt-hill gradually washes it away, but the process is very slow. A shower of detached blocks falls after a storm, but these fragments grow together again as broken ice does. The worst enemies of the mountain are underground watercourses which dissolve great caves in its base. These caves are interesting, but hardly safe to visit for obvious reasons. Their roofs are covered with salt stalactites. This is not the only salt mountain in the world. There are some in Persia, worked as mines, and the miners are said to build houses of blocks of salt, cemented together by wetting. There is one in Colombia which was uncovered by a landslide in 1870.—Translation made for THE LITER-ARY DIGEST.

### ACCURACY IN SCIENTIFIC ROMANCE.

A REVIEWER in Nature (London, January o) gives high praise te Mr. H. G. Wells for carefulness and accuracy where he deals with scientific fact in his romances. The writer speaks particularly of Wells's recent story, "The First Men on the Moon." After mentioning Jules Verne's work, with which the Moon." After mentioning Jules Verne's work, with which the Moon." After mentioning Jules Verne's work, with which the Moon." After mentioning Jules Verne's work, with which of the Moon of the Moon of the Moon of the Moon of the most (Jaring character," he goes on the say.

"Mr. Wells has produced a book of a very different character: he has made himself master of the little we know about the moon, and thought out the possibilities with the greatest care, and the result is a narrative which we will venture to say is not only as exciting to the average reader as Jules Verue's, but is full of interest to the scientific man. We do not mean that the astronomer is likely to learn any new facts from this resume, for which he himself furnished the material; but he will be astonished to find how different the few scientific facts with which he is familiar look in the dress in which a skilful and imaginative writer can clothe them, and it is worth reading the book with minute care to see if one can not catch Mr. Wells in any little scientific slip. Some writers are so easy to catch that the game is not worth playing; but Mr. Wells is a worthy opponent, and we are glad to see that his scientific rank has been recognized by the Royal Institution, who have invited him to lecture on Januarv 24.

But hard as it is to "cache Mr. Wells napping," the reviewer flatters himself that he has achieved this feat, altho he confesses that he makes the assertion "with a triumph not free from trepidation." The reader will remember that Mr. Wells's hero journeys monivant in a glass sphere covered with "cawrite"—a material impervious to gravity. When all the bluds are closed, it floats in space, but when one is epened toward the moon the sphere is attracted in that direction. Says the reviewer:

When the cavorite blinds are closed and the sphere starts on its journey, he describes the curious effects of the absence of external gravitational attraction-all the material occupants of the sphere slowly collect in the Interior by their mutual attractions, and there is no 'up ' or 'down.' Then a window is opened toward the moon and promptly everything gravitates toward the moon-the direction toward the moon is descriward, the the attraction is slight. Surely this is a slip? With bodies moving freely in space only the differential attraction would be felt, and this would be negligible compared with the mutual attraction of the occupants of the sphere. Even if it were not so small it could not act in the manner specified; its tendency would be to separate bodies (as in the case of the tides), not to bring them together, and thus a man near a 'floor' would not fall toward it but would rise from it. But Mr. Wells is so wonderfully careful in general that we make this criticism with far less confidence than we should have felt in another case; we have an uneasy feeling that he may dexterously transfer the supposed slip from his account to ours.

Plant-Movement.—A discourse on the movements of plants was delivered at the recent necting of the British Assignment at the by Mr. Francis Darwin, whose father, the great naturalist, first audied this subject. Popular Science Area (January) describes the discourse and its bearing on vital phenomena as follows:

"A series of photographs showed how the movements of stem and root are normally controlled by the growing tip in all cases and how the directions of both portions of the plant are kept vertical in spite of disturbing causes. It was also shown that whence the growing tip of the stem was "blinded," by covering it with a sheath of tinold, the guiding influence of light is aboilshed. The tip of the stem, or root, acts as a sense-organ, directing the growth at the some of elongation, which is seadled farther back

and corresponds to the motile organ of an animal. The presidential address had expressed the view that the laws of nature could not be interfered with by living matter. The neo-vital school would, in the main, agree with this view. Their assertion is that to describe completely the phenomena of life the notiens of chemistry and physics are necessary, but not sufficient. Mr. Darwin emphasized this view by demanding that the phenomena of plant movement should be regarded as psychological; and by describing them in terms of memory and even of conscieusuess. The issue between the eld and the new schools is more clearly drawn. The older school maintain that all the phenomena of life, however unintelligible they may seem, will ultimately be explicable by chemical and physical notions, while their opponents, who emphasize the fact that such notions do not now, certainly, completely explain the phenomena, refuse to bind themselves to prephecies.

#### DRILLING FOR OIL IN THE OCEAN.

W E Americans are eminent for simple and practical methods of solving problems. In parts of Europe, where there are oil-bearing strata under water, it has been proposed to get at them by gigantle projects of reclamation. In Summerland, Cal,

SECTIONAL DIAGRAM SHOWING THE RE-LATION OF THE CONDUCTOR TO THE REST OF THE CASING IN A SUBMARINE OIL-WELL.

Courtesy of The Scientific American

the local engineers have achieved the desired result in a much simpler and easier, but not less effective, manner. In an article in The Nestethie, Juneation (Junuary 18), Dwight Kenpen tells us that in Summerland there are already about one hundred submarine olivells in successful operation, besides others helow high-ide mark. He thus describes the method of keeping the sea out:

"The drilling of submarine oid wheels, as 'performed at Summerlaud,' primarily involves the construction of a wharf from the shore to some point over the oil-producing strata, or across the region where the borings are contemplated,.....

"A peculiar condition in connection with these wharves, which is of uncommon interest, is their immunity from the teredo. The oil wassed from the many wells both on the wharves and on shore is often seen floating on the surface of the sea.

This either drives off the destructive teredo, which are quite plentful in those waters, or see makes it impossible for those pests of the sea to find lodgment in in the oil-coated piles. The oldest piles have been driven nearly four years, and there has been no deterioration whatever in any of the wharves due to shipwomer or any other form of marine life.

"I pun the completion of the wharf, or so nuch of it as is necessary for the immediate purpose, the drilling machinery is assembled at the location for a well. In beginning the drilling operations the first important work to be done is in putting down what is locally termed a 'conductor.' The conductor consists merely of oil well casing of a size larger than that with which the well would have been started were there no sea to contend with. In setting it, the conductor is held suspended by the sand line in an upright position with the shoe about a foot above the sand. It is then plumbed as nearly as cas he, and, watching a favorable opportunity when the wash of the water is least violent, it is suddenly dropped to the sand. It is then ceutrately plumbed

while resting on the ground under the ocean, and is secured in its vertical position by means of boards nailed to the derrick floor in such a way that their edges bear against the casing from four different directions. The drilling stem, which has been previously fitted with a driving-head and clamps, is then ruit into the conductor, and it is driven into the sand as far as it will safely go. Then the clamps are removed and the drill set to work, and by alternate drivings and drillings the conductor is worked through the sand to the clay beneath, where it is discontinued. By the time the top of the conductor has been driven to the level of the derrick floor the bottom end has become so deeply embedded in the sand that the stays can be removed and the casing driven beneath the derrick to a point near the level of the water underneath. Should it then prove too short to penetrate the sand, other lengths are screwed on and the operations continued antil that object is attained. When the conductor has been driven a few feet into the clay underlying the sea-sand, the ocean is as effectually shut off from the well, for all practical purposes, as if it was held back by a dike or sea wall. However, there is still danger of letting the ocean water into the well through the carelessness or incompetence of the driller. It is quite essential to change the drilling bit to the next smaller size immediately on

stopping the conductor or whenever it is decided to go no farther

does not necessarily postulate ions in the definite sense contemplated by the modern ionic theory. Almost any of the more recent theories of electrochemical action would, perhaps, answer the purpose of the new hypothesis equally well. It is only reasonable to expect that in time physiologists will discover the fundamental laws—perhaps very simple in character, but no doubt very complex in superposition—which underlie nerve action, and the objective seld set demonstrates. There can be no town of the content of t

#### THOUGHT, EXERCISE, AND THE BLOOD.

M ANY a hard student has complained that concentrated thought sends the blood up into his head. That this is no fancy was abown several years ago by Prof. Angelo Mosso, of Turin, Italy, who devised a balance on which the human body could be so poised that a change in the distribution of blood could be detected at once. This showed, for instance, that when

a man who was exactly balanced was given a numerical problem to solve, his head would at once sink, owing to the determination of blood to the brain, Professor Mosso's experiments have been much extended and his apparatus improved by Director William G. Anderson, of the Yale Gymnasium, who has devised what he calls a "muscle-bed." This is described by the inventor in an interview pub-

GENERAL VIFW OF THE WELLS AT THEIR THICKEST PART, Courtesy of The Sientific American.

with any size of easing, and also to keep the easing following closely after the drift. Otherwise, when drilling altend of a conductor or casing that is permanently stopped, before reducing the size of the bit, there is danger of water oreaking through from above into the new boxing; and when drilling too-far also also the casing the tools are liable to gain more and more sering, either strate, those reasting a cavity of much greater dameter than the easing will fill, and which frequently becomes a watercourse outside of the easing for the rain mot only of the well, but also of the allowed to the reduced the reduced the reduced the reduced to the reduced the reduced the reduced to the reduced the reduced to the reduc

The New Norve-Theory.—The electrochemical theory of nervous action, due to Professors Loeb and Mathews of Chicago, continues to excite attention, but it apparently meets with more favor among physiologists than with electricians. Says The Electrical World and Engineer (January 11):

"Any physiological theory involving the ionic theory of elecricity is a theory of the second degree, since the ionic theory is itself only a working hypothesis that has not yet been received as a matter of demonstration beyond the pale of doub. Norover, it would seem from the outline given of Dr. Mathews's theory that the ionic theory might fall without necessarily implicating the essentials of the nerve-action theory here considered so that in certain sense it would seem that the new theory lished in the New York Sun (January 11) as a movable couch on which in man can be easily rolled in either direction by a large or me adjustment. The bed can be locked at any point, and there are levels, gradinated senles, and initiator to be used in making records. The whole is halanced on kinfe-edges and is therefore very sensitive. Dr. Anderson is reported as saying:

"It is obvious that a body perfectly balanced on the delicate kntfe-edges of the muscle-bed will be affected by additional weight on either side of the point of equilibrium. Consequently an additional supply of blood will cause the bead to settle if the blood goes toward the caput, or the feet to go down if the flow is in the opposite direction.

"I have . . . found that under mental work the head would suik and in a very brief period. I have balanced students before written examinations, and have found the center of gravity changed after the mental test from two to sixteen millimeters, or from a sixteenth of an inet to almost two and one-half inches,

"This shows extra blood supply to the upper extremities. In a few cases there was no change; rather was the result minus, "It has been found in the case of men who have temporary brain congestion due to study that the center of gravity would fall if the lower extremities were exercised. In other words, the

blood was called away from the neck and encephalon, as it was needed elsewhere.

"It has been found that mere thought will send a supply of blood to parts of the body. A man perfectly balanced will find his feet sinking if he goes through mental leg gymuastics but does not make the movements,"

One of Dr. Anderson's most interesting results is that the flow of blood to an exercised part is affected by the attitude of mind of the person exercising. He says:

"I have found that men who exercise in a listless, automatic, or mechanical manner do not change the center of gravity to a great extent, but in nearly every case, when a man has taken his special series of movements in a conscious or highly voliculal manner, the supply of blood to the arms or legs was very noticeable and the line of gravity went up or down markedly.

"If two men exercise the arms and thorax, taking the same exercises, one stauding before a looking-glass, the other not, the former will show a higher center of gravity than the latter, or a richer blood supply to the parts. This is another illustration of the effect of conscious versus mechanical methods of exercise."

Dr. Anderson also finds that movements in which men take pleasure send a richer supply of blood to parts than that which comes from movements not to their liking, and that the student who is interested in his work attends to it with greater conscientionsness than its manifested by the one who is not interested. Pleasurable thoughts send blood to the brain, while disagreeable thoughts drive it away.

The inventor deduces the following rules, which seem likely to be beneficial as well as interesting:

"A man will get better results from his exercise if he will attend to it and not make it too mechanical. By better results I mean a richer blood supply and healthier metamorphosis of

tissne.
"In some ways it is better for people to exercise before a look-

ing.glass....
"Interesting exercises are of greater worth than those which are not interesting.
"All out of-door sports, athletics, rowing, swimming, boxing,

"All out of-door sports, athletics, rowing, swimming, boxing, and games are better means of physical development than uninteresting gymnastics. In the latter category I include the so-called oft-repeated gymnastic drills,"

CAN A MAN HIBERNATE? - An interesting variation of the ordinary "fasting" exhibitions is now current in London, according to The Hospital It says: "Papuss, a South American, aged 34, after being wrapped up in 400 yards of flanne! bandage, has been placed in a glass box or 'crystal urn, which has then been sealed up water-tight, and sunk under water.
... The man, meanwhile, is supplied with air by means of a tube through ... The man, meanwhile, is supplied with air by means us a weither food which it is driven by an electric fan, but with nothing else, neither food which it is driven by a well week. That this is a performance demanding very considerable endurance and fortitude no one will deny, even the the man in the urn be assisted, as he claims to be, by his power of sending himself into a cataleptic trance, and by auto-auggestion as to the unreality of hunger and the non-necessity of food. What is of some scientific interest, however, is the statement that by aid of the careful and rather tight bandaging the circulation can be so limited as to exercise a considerable influence upon the tissne waste and presumably, therefore, on the necessity for water for excretory purposes. We know, of course, that in hibernating animals the circulation goes on in a very modified way, being reduced almost to zero, probably in consequence of an influence exerted through the vaso-motor nerves, and if it could be shown that a somewhat similar the only local limitation of vital changes can be effected by external pressure, the matter would be one of very considerable interest. It will be recollected that attempts have been made from time to time, with more or less success-generally less-to control inflammatory processes by this means."

#### THE RELIGIOUS WORLD

#### ARE MINISTERS EGOTISTICAL?

THE assertion is sometimes made that ministers as a class are egotistical, and Mr. James Buckham, a writer in 7Ae
Cerititan Kegitter (Boston, January 16), thinks that there is some truth in this charge. In fact he confesses that within the range of his ministerial acquinitance he recalle but few who do not impress him as being more or less egotistical, or at least "self-conscious beyond the normal and becoming." He writes:

"This temptation is peculiar and most subtle in the case of the minister, because from time immemorial the priestly or clearla class has been regarded as sanctified and lifted above other classes by mere virtue of its more sacred calling. Men lineve encouraged its representatives in cheristing the conception of a vicarious excellence and noblity and worshipfulness derived from the priestly function. And now, in these later days, when the world's sensit worship has been largely withdrawn from the minister in his purely representative capacity, and he has been compelled to stand or fall at a man, appraised by inherent manly virtue alone, it has been a hard and slow and reluctant task for the clergyman to disabuse himself of the old notion of sacerdotal saucity, and to estimate himself and the homage due him purely on grounds of individual character and ability.

"Another reason why the clergyman is peculiarly liable to the temptation of egotism is because his function is necessarily more or less paternal, advisory, and instructive. He is, indeed, like a shepherd in the midst of his flock. No figure so well expresses the hitherto accepted idea of the pastoral relation as this old, familiar Scriptural illustration. The minister is always the central figure in his little world, the one to whom all look for advice, for assistance, for comfort, for inspiration, for enlightenment. It were strange, indeed, if a man habitually placed in such a position should not almost unconsciously yield to pleasing convictions of personal sufficiency, superiority, and authority. A very great and well-balanced man, with the native modesty of true greatness, might not entertain or yield to such feelings. But I submit that it would be almost beyond reason to expect the ordinary man, the man of average caliber, to remain entirely un-moved and unspoiled by them. We can not conspire to set the average man ou a pedestal, and then require him not to look down upon us,"

The real fault, adds the writer, lies not so much with the minsteers as with those who "provoke and seduce them to egotism." The "clergyman-worshiper" has for many generations been largely in evidence in all Christian lauds; and, in the opinion of Mr. Buckham, it is "this class (of whom women, no doubt, form fully four-fifths) that is chiefly responsible for the smug selfcomplacency, the dictatorial spirit, professional mannerism, and high self-exteem of far too many clergymen of only ordinary mental and suffittual caliber." He concludes as follows:

"The egotism of ministers will be abated, I think, in this very natural way: that, whereas in the past they have been distinctly coddled into it, the future is going to subject them to a respectful but decided lack of class-worship that will be most wholesome and corrective in its effect. With the growth of intelligence, independence of thought, personal equipment and resource, selfcommand and self-understanding, the average churchgoing man and woman are going to be less childishly dependent upon the minister than heretofore. They are going to rejoice in spiritual interpretations and spiritnal opinions of their own, as well as intellectual. There are going to be more and more stout, independent beil-wethers among the flock. There is going to be less timorons crowding about the shepherd's legs, less following and more leading, or at least progressing pars passu. The minister is presently to lose his immensely superior status of man-amongsheep, and become, as he ought, man-among-men,-wiser man among men, it may be, but not so unnaturally disassociated in status as to seem demigod or superior being.

"Evidences are plenty that this emancipation of both clergyman and parishioner from an abnormal and harmful relation is already taking place. The worship of ministers is gradually dying out,—gradually, but surely,—and with it must pass the clergyman's autocracy, his sense of superior importance, and consequently his egotism. This seems, to the writer, one inevtable result of man's spiritual emancipation through growing intelligence; and he hopes that he may live to see the day when the average minister will have no more and no stronger temptations to egotism than the average man in any profession."

#### A THEOSOPHICAL VIEW OF SACRAMENTS.

A NNIE BESANT, in her recent work, "Esoteric Christianlty," presents as arguments for the preservation of religious forms and ceremonies the very reasons which, in the stern
logic of reformers of the stamp of Knox and Calvin, require their
aboltion. That these forms are derived from paganism is, in
her mind, a credential—a proof that they are a part of natural
and universal religion. That there is physical value, tending
to psychic culture of the participants, in the esthetic tones of the
ritual and the impressive gestures of the ceremonial, adds, in
her estimation, to the spiritual nature of religious observances,
instead of detracting from their ethical character, as is held by
the antiformalists.

Naturally Mrs. Besant, having these opinions, upholds the practises of the Roman Catholic and Anglican churches as against those of the evangelical bodies. In accordance with her view that a sacrament is both a symbol of divine truth and an actual "method by which the energies of the invisible world are transmnted into action in the physical," as "literally as in the galvanic cell chemical energies are changed into electrical," she adopts the definition of sacrament as given in the Catechism of the Church of England: "An outward and visible sign of an inward and spiritnal grace given unto us, ordained by Christ Himself, as a means whereby we receive the same and a pledge to assure us thereof." "In this definition," she says, "we find laid down the two distinguishing characteristics of a sacrament. The 'outward and visible sign' is the pictorial allegory, and the phrase, the 'means whereby we receive the' 'inward and spiritual grace covers the second property." The phraseology of the Episcopal Catechism distinctly alleges, Mrs. Besant repeats, that the sacrament is literally a means whereby the grace is conveyed, and that without it grace does not pass, at least in the same fashion, from the spiritual to the physical world. In this connection she imposes upon the discussion the theosophical view of the nature of the spiritual world :

"From the standpoint of occultism there is no dead force and no dead matter. Force and matter alike are living and active, and an energy, or group of energies, is the veil of an intelligence, of a consciousness, who has that energy as his outer expression, and the matter in which that energy as his outer expression, and the matter in which that energy moves yields a form which he guides or ensoults.

"These numberless lives, above and below man, come into touch with human consciousness in very definite ways, and among these ways are sounds and colors. . . . . .

"In communicating with the higher intelligences certain sounds are useful, to create a harmonious atmosphere, suitable for their activities, and to make our own subtle bodies receptive of their influences.

"The effect on the subtle bodies is a most important part of the occult use of sounds. These bodies, like the physical, are in constant vibratory motion, the vibrations changing with every thought or desire. These changing irregular vibrations offer an obstacle to any fresh vibration coming from outside, and, in order to render the bodies susceptible to the higher influences, sounds are used which reduce the irregular vibrations to a steady rhythm, like in its nature to the rhythm of the intelligence sought to be reachied. The object of all off-repeated sentences is to effect this, as a musician sounds the same note over and over again, until all the instruments are in time. The subtle bodies must be tuned to the note of the being sought, if his influence is to find free way through the nature of the worshiper, and his was ever dome of old through the use of sounds. Hence, music has ever formed an integral part of worship, and certain definite cadences have been preserved with care, handed on from age to age.

"lu every religion there exist sounds of a peculiar character called 'words of power,' consisting of sentences in a particular language chanted in a particular way."

The anthor gives examples of these sentences in the Sanskrit "mantras," the effect of chanting which "is to create vibrations, hence forms, in the physical and superphysical worlds," and the extent of whose influence is "according to the knowledge and purity of the singer." "If his knowledge be wide and deep, if his will be strong and his heart pure, there is scarcely any limit to the powers he may exercise in using some of these ancient mantras."

So in the Roman Catholic Church, according to Mrs. Besaut, the Latin is used in chants not "to hidd knowledge from the people," but in order that "certain vibrations may be set up in the invisible worlds which can not be set up in the ordinary languages of Europe, unless a great occulist should compose in them the necessary successions of souths."

From the emotive and moral effects on the hearer of the Latin chants, the author passes to their physical results in the higher worlds. They appeal, the says, "to the intelligences in those worlds with a meaning as definite as the words addressed by one person to another on the physical plane, whether as prayer or, in some cases, as command."

The next essential part of the sacrament is, according to Mrs. Besant, "The Sign." "Bach sign." she says, "has it sown particular meaning, and marks the direction imposed on the invisible forces with which the celebrant is dealing, whether these forces be his own or poured through him. In any case, they are needed to bring about the desired result, and they are an essential portion of the scaremental rice."

Holding such views of the power of magic, it is not surprising to find the author turning to the Egyptian "Book of the Dead" as well as to the gospel of early Christian mysticism, the "Pistis Sophia," for fillstrations of the value to the soul in its fourney from this to the other world, of the possession of the occult Word and Sien.

The last requisite of a sacrament, in this theory, is that some physical material be used. This not only serves as a symbol, but also actually forms a "material means of conveying the grace," for which "high ends" a "subtle change in the material adapts it." The etheric theory of the physical construction of the universe is used by Mrs. Besant to explain the secret of how this change, as well as kindred miracles of magnetic healing, etc., is accomplished:

"In a sacrament, magnetic changes are caused in the ether of the physical substance, and the subtle counterprast are affected according to the knowledge, purity, and devotion of the celebrant who magnetises—or, in the religious term, consecrates—it. Purther, the Word and the Sign of Power summon to the celebration the angles specially concerned with the materials each and the nature of the act performed, and they lend their powerful aid, pouring their own magnetic energies into the subcle counterparts, and even into the physical ether, thus reinforcing the energies of the celebrant.

The author concludes this part of her discussion as follows:

"We thus see that the outer part of the sacrament is of very great importance. Real changes are made in the materials used.

They are made the vehicles of energies higher than those which naturally belong to them; persons approaching them, touching them, will have their own etheric and subtle bodies affected by their potent unagnetism, and will be brought into a condition very receptive of higher influences, being tuned into accord with the forty beings connected with the Word and the Sign used in consecration; beings belonging to the invisible world will be present during the sacramental rite, porting out their being and gracious influences; and thus all who are worthy participants in the ceremony—sufficiently pure and devoted to be timed by the vibrations caused—will find their emotions purified and stimulated, their spirituality quickened, and their hearts did with peace, by coming into such close touch with the unseen realities."

## DR. VAN DYKE ON PRESBYTERIAN CREED REVISION.

A GOOD deal of confusion exists, even in religious circles, as to the definite purpose of the work undertaken by the Revision Committee of twenty-one ministers and elders appointed by the last Presbyterian General Assembly. This fact has led Dr. Henry Yan Dyke, one of the most prominent Presbyterian clergymen of the country, to answer, in plain language, three fundamental questions relating to this matter, namely: (1) What makes the work of revision necessary? (2) What is proposed to be done? and (3) When it comes, what results may be loped for? On the first point he says (writing in Tee Coulews), languary 11);

"There is a twofold need for revision of the Westminster Confession of Faith. In the first place, the church has been studying her supreme standard, the Bible, for two bundred and fifty years since the Confession was written. She has been educated by Christ for one hundred years in the great work of missons, It is reasonable to suppose that she has learned something. Why should she not express it in her erved!

"Another reason for revision arises out of the fact that the Westminster Confession was made in a time of herce conflict and controversy. It was natural that certain things should be stated then with greater emphasis than they would have otherwise received; that the metaphysics of the seventeenth century should creep into certain chapters; and that certain points should represent a judyment of that age rather than a permanent truth. For example, the Westminster Confession speaks of the Pope of Rome as the Antichrist. Presbyterians to-day do not generally believe this. Again, by expressly mentioning 'elect infants,' the Westminster Confession leaves open the supposition that there may be 'non-elect infants.' Presbyterians to-day believe that all who die in infancy are saved by Jesus Christ. The Westminster Confession has a long metaphysical chapter on God's eternal decree, which at least seems to teach that some men are created to be saved and others created to be damned. The Presbyterian Church to-day does not believe this, and to guard against misapprehension on the subject it wishes to say clearly and unmistakably that God has not put any barrier between any human soul and salvation

"Moreover, the Westminster Confession has no chapter on the love of God for all men, on the Holy Spirit, on the Gospel, or on missions. Now the Presbyterian Clinrch has come to believe in these things with all its heart; and it wishes to put its belief into words.

"Therefore revision is needed, not because of a conflict in the church, nor because of a lack of liberty, but because faith, deepening and broadening through the study of God's Word, craves an utterance in the language of living men."

Two tasks confront the Revision Committee. One is to add to the Westminster Confession an appendix (or, in more technical language, a" Declaratory Act" guarding against misunderstanding on the points mentioned, and expressing the faith of the Presbyterina Church in missions, the Itoly Spirit, and the love of God. The second is to prepare a brief, clear, and simple statement of the principal doctrines of Presbyterian faith, to supplement, but tot supplant, the Westminster Confession. The first result of these changes, declares Dr. Van Dyke, will be "a simpler creed." He continues:

"Not that the mysteries which are inherent in religion will be removed. That is impossible. But there will be fewer long, technical, metaphysical, and controversial words, and less effort to explain and define foal's eternal purpose. A statement of be life that can be used without a dictionary, understood by people who are not philosophers, and read in a few moments, would indeed be worth having.

"Another result that we may hope for is a clear word on the duty of the clurch to serve the would by good works, and to preach Christ to everybody. We do not need to wait, indeed, for this word to be spoken before we do our duty in living and preaching the tiospel. "Peace and work' is now the program of the church. First her peace will be promoted, and her work added to the chirach. First her peace will be promoted, and her work added nissons—the charter of her life—Christ for the world, and the world for Christ.

"Finally, this revision movement should give us a stronger emphasis on the truth that God is love.

"Sovereignty and grace have always been the two great pillars of the Reformed faith. Sovereignty means that God is supreme. Grace means that God alone can save.

"Take these two words separately, emphasize the sovereignty, limit the grace, and you have a hard creed. But take them together, believe in the sovereignty of grace and the grace of sovereignty, and you have a creed that is infinitely sweet and glori-

"No man can be saved without God. There is no man whom God is not willing to save.

"That is the whole of it. That is the creed which is incarnate in Jesus Christ, the Savior of the world. That is the creed which our faith longs to utter."

## HAS SCIENCE DIMMED THE HOPE OF IMMORTALITY?

THIS question, which has engaged the attention of so many gifted minds, is discussed by one who combines in a rare degree choice scholarship and elegance of diction, namely, the Rev. George Matheson, D.D. In an article in the London Experience (December) he says:

"My object has been to investigate whether the influx of the modern waters has effaced former evidences. I have now come to a department of natural religion which is supposed to have been specially damaged by the inroad of these waves; I allude to that tract of land which mun sees in the future. The immortality of the soul has been discussed for ages, and the fiercest stage of the battle has ever been in the heart of each individual man. I do not here come forward to add to the list of combatants. Mine is a humbler aim. I want to ask whether anything has happened to dim the hopes of yesterday. No man can deny that there were hopes vesterday-hopes whose light was strong enough to help men to die, and-what is more wonderful-to help men to live. I want to ask if these hopes have been put out. They were lighted before the days of evolution; has evolution extinguished them? Do they belong now to a castle in the air, to a palace of fancy, to a conception of nature which no longer represents the world in which we dwell? The cry of multitudes is, 'Our lamps are gone out.' The plaint is not that they are inadequate, but that they are extinguished. Hundreds would be abundantly satisfied if they could only be told that the lamps of the world's virgin youth were still available to light them into the kingdom,"

Before proceeding with his discussion, Dr. Matheson states the conclusions at which he himself has arrived

"I, too, have experienced the weight of the problem, and have subjected these lamps to a careful scrutiny. And, for my part, I have come to the conclusion that none of these lumps has gone out. I do not think there is a single star of hope that once trembled in the world's sky which has been extinguished by the supposed shadows of the atmosphere of science; and I will try to state the grounds which have led me to this conviction."

The writer then traces the history of the search for some

"deathless object, anything which actually bears the stamp of immortality," and explains how the introduction of Christianity blocked the investigation in the material world. Continuing, he says: "There came times when he [man] longed for something of the old spirit—some return of that natural sense of immortality which saw the fadeless amid the mutable, the constant amid the changeful, the permanent amid the preishable." This leads on to the scientific solution of the problem:

"Such is the want of the modern man. Has it been met? Yes. But by whom? By the last man from whom we should ever have expected: by the evolutionist. In the afternoon of the day, in the midst of the world's prose, there has been realist the dream of the heart's poetry—the desire to find an immortal thing. A hand has pointed us to one impreshable object; and it is the hand of science. Evolution—the doctrine of change—has itself revealed something which changes xnd."

In the writings of Herbert Spencer Dr. Matheson has found the scientific demonstration of immortality:

"He (Spencer) tells us that there is in this universe a force whose characteristic feature is abidingness or, as he calls it, resistence. In a universe of perpetual changes—changes which the force itself has generated—it has from all terraity remained unmoved. It has never been increased; it has never been diminished. Its quantity has never varied; amid endless in flactuating manifestations the amount of its energy is always, the same the same the same and fall, its waters have the same measurement. The winds rage and rest upon its boson, but, alike in their sand and rest upon its boson, but, alike in their grant and in their rest, the weight of the atmosphere is equal. The passions of the heart sweep and sleep on it's heart, but, all the in their sweeping and in their tsleeping, the pulsations of this mighty force are neither less nor more.

"And so, after all, there is such a thing as immortality in the universe!... For the first time in the record of man we have received scientific testimony to the existence of an actual immortal life."

The particular lump which is examined by the writer is the value attached to the individual life. The conflict for two hundred years prior to 1850 had its results crystallized in the words of Boilingbroke: "The species is everything, the individual is nothing; God's providence can only reach the general good,." But after the birth of the doctrine of evolution there came new hight on this question:

"I would say that in the light of evolution she [nature] seems carcless of the species and careful of the individual." She is carcless of the species, for the doctrine of evolution has tended ever more and more to obliterate the landmark st of species. It has tended more and more to hide from human investigation the points of difference between race and race, and to bring into prominence the points in which race and race agree. . . . Every stage has been a singe of intereasing individualism. Bach new form is a form that turns more invard on itself. The scar is more individual than the pulmous mass from which it springs; it lives a separate life. The plant is more individual than the pulmost in the same file mechanical things. The stage is the special than the pulmost the same file mechanical things. The which isolate him from all beside."

Dr. Matheson fortifies his interpretation of Spencer's doctrine by reference to the teachings of Weismann, wherein he says

"There is a creature which, as Weismann says, has never seen death! Before the mountains were brought forth or ever the dry land appeared, while yet the earth was only a wide waste of waters, there was formed within these waters a tiny life encased in a tiny form. That life, that form, has never died. Accident has doubtless eliminated many of its off-shoots, but the essence of the life remains."

The writer sums up his conclusions in these words:

"This lamp, then—the lamp of individuality—has not been put out by science. Science has rather burnished the lamp anew. It has shown that the aspiration of religious (aith is no unscientific dream. It has revealed the spectacle of a creature which has escaped death, which has perpetually renewed its days. Is there not in such a spectacle a scientific hope for man—the scientific suggestion that he, too, may possess an individual principle which the cleavage called death may leave unaffected? This is not an analogy like the simile of the butterfly, not a poetic symbol like the resurrection wrought by spring. It is a sober truth, a prossic fact; and as such it grounds religious faith upon the ledge of experience."

## STATISTICS OF THE RELIGIOUS BODIES OF THE UNITED STATES.

M UCH is heard in these days of the decidence of religion and the growth of religious indifference, but the statistics of the religious bodies of the United States that have recently been made public by the Rev. Irr. II. K. Carroll do not seem to justify any pessimistic conclusions. Dr. Carroll was in charge of the religious statistics of the United States census of 1890, and he issues annual tables showing the extent of religious growth and progress. His latest table, which gives the membership of the principal denominations and the accessions of 1921, is as follows:

Relig ous body.	Membership at present	Growth 1901.	
Roman Catholic	9,158,741	466,081	
		11,141	
Disciples of Christ	1,179,541	19,559	
Southern Baptist	8.574.105	25,712	
African Methodist	. 668.1 A	27,890	
Colored Haptist	. Lisacillea	15,146	
		16,500	
Presbylerian, North	993,815	16, 182	
hustian Scientist	. AR-030	13,950	
Lutheran General Synod	204.068	4,500	
ongregationalist	614.815	3.475	
Raptist, North	1,005,611	1,010	

The following table, prepared by Dr. Carroll, shows the denominational membership and rank in 1890 and 1901

Religious body,	Rank,	Communi- cants.	Rank,	Communi-
Roman Catholic	1	9-158-741	1	6,212,417
Methodist Kniscopal		2,760,301	2	9,240,154
Regular Baptist, South	- 1	1,664,108		1,280,000
Regular Eaptist, colored		1,610,801	1	1,348 989
Methodist Episcopal, South	5	1,477,160	- 5	1,900,476
Disciples of Christ	6	1,170,541	8	641,011
Regular Baptist, North	7 8	1,005,613	6	800,450
Presbyterian, North		999,815		785,224
Protestant Episcopal	9	750,799	9	539,054
African Methodist	10	698,154	11	452,735
ongregationalist	11	634,835	10 ,	\$12,771
Lutheran Synod Con	13	566,375	12	757-153
African Methodist, Zion	13	\$37-337	13	349,788
ulheran General Conncil	14	346,553	14	324,847
Latter-Day Saints	15	300,000	19	144-537
Reformed German	16	248,929	15	304,018
United Brethren	17	940,007	16	200,474
Presbylerian, South	18	927,931	18	179,721
Colored Methodist	10	904,973	80	179,384
Lutheran General Synod	28	204,098	97	187,439

The most remarkable item on this list is that showing the growth of the Roman Catholic Church. Dr. Carrill rates the increase in Roman Catholic membership as too high, and points out that the figures given represent, in a large proportion of the dioceses, the growth for several years, whereas in the case of Protestant bodies the figures given represent those for one year only.

Dr. Carroll estimates the total church-communicant membership in the United States at 85,006,452. There are some poon Mormons in or about Utah, and this body claims to have made 65,000 new converts in the East last year. Quakers lots, in 1991, according to Dr. Carroll, 93 members. It has long been known that Quakers in the East, where they cling to old styles in dress, language, and forms of public worship, have been losing in aumbers and influence, but for many years they have been growing in Indiana, Illinois, and lows. Now it is shown that Quakers in the West, where they have adopted the progressive methods of other religious bodies, are losing at a steady rate. Another

fact brought out by Dr. Carroll is the continuous tendency of religious bodies to divide into factions. He finds no less than twenty-two different kinds of Lutherans, and twelve kinds of Presbyterians.

"Taking the figures as representative of their face value," remarks the Pittsburg Gazette, "our country contains the largest body of practical Christian worshipers in Christendom," The New York Mail and Express says:

"It looks very much indeed as if the seed sown by the great evangelical organizations, such as the Society of Christian Endeavor, the Epworth League, and the Baptist Young People's Union, were beginning to yield lifs harvest to the churches. The statistics are also an impressive vindication of the American principle of a free church in a free state. The fathers who forbade forever an establishment of religion were not irreligious but for the most part profoundly religious. They had see that the religious setablishments of the Old World were of doubtful value, either religionsly or morally. They believed that by understanding alone is a house established; and the experience of these early days of the twentieth century, as well as that of all the years that have passed since the fathers fixed their constitutional decrease, has proved their wisdom."

The Providence Journal calls attention to the remarkable vitality of the Disciples of Christ and the Christian Scientists, and says:

"The tenacity of religious bodies, no matter unifer what discouragements, is sufficiently noteworthy. The great bodies increase and the small bodies diminish, but still the latter stand by their guns. . . The sectarian principle has been, and doubtless long will be, an important factor in American religious development. The antagonism of the Puritains to the Church of England, the neglect by that church of colonies like Virginia, where it had a fair chance, the strong prejudice ugainst the Church of Rome which even now has not wholly passed away, and the divisions in large Protestant bodies brought about by the slaved needs on and the Criti War-lay religious of the strength of the religious spirit that the figures show on the whole a steady and healthy growth."

The Cleveland Leader, noting the fact that the rate per cent, of increase in the membership of the leading religious organizations last year is but 2.67, as compared with 2.18, the annual rate of increase in population from 1890 to 1900, thinks that this showing can hardly be regarded as satisfactory. It continues:

"These statistics are encouraging to all interested in religious work, but states are a vast addition every year to the masses of people in this country who have no connection with any church. The actual gain in the total membership of the churches is not more than half as great as the net growth of the population of the United States.

"Such facts are not cheering. They suggest that the nucldiscussed question why the churches do not progress faster in power and memberahip needs much further consideration, of the most careful kind. It is certain that the religious workers of America will never be satisfied with gains equal to only half of the annual growth in the country's population.

"Missions will continue to claim and receive the attention of the clurches of the United States, but they will not be allowed to obscure or weaken the efforts which are incumbent upon religious organizations to lessen the wast number of people outside of all denominations. There is much to strive for at home.

Mohammedan Missions in the Philippines.—The statement is made that Mohammedan missions are meeting with a measure of success in the Philippine Islands. There are at present eight Mohammedan missionaries in Manila, of whom three, strange to say, are American citizens. The money to support them comes from India and from Singapore. In the opinion of The Christian Observer (Louville, Presb.), the Philippines are

not unlikely to prove a fruitful field for Mohammedan propaganda, for the following reasons:

"1. The Romanism which has prevailed there has disgusted the people. As they know no other Christianity than Romanism, they naturally turn from all Christianity. The rapacity and the idolatry in what is there called the Christian religion is enough to produce this effect.

"2. The change from Spanish to American rule favors freedom in religion, and therefore freedom to the Mohammedans to proselvte.

"3. The delay on the part of Protestants to take advantage of their opportunity to preach the Gospel there favors them,

"4. The seeming restraints which are put upon Protestant efforts in the Philippines by officers of the United States Government favor the impression that the choice of religion lies between Mohammedanism and Catholicism.

"5. While the United States Government gives no public official recognition or sanction of the Bible there, yet the Koran has been officially recognized as a valid code of law, and indeed as the established code in the Sulu Islands." 1

It is evident, comments the same paper, that Mohammedanism, so far from being effect and dying, is active in missionary work, With Roman Catholic missions from this country in Manila, and Roman Catholic school-leachers from this country, and Mohammedan missionaries (in part from the United States), The Observer thinks that "we may well be aroused to consider what duty Protestantism owes in the Phillionine Islands."

## FIGHTING THE "AWAY-FROM-ROME" MOVEMENT.

THE "Away-from-Rome" agitation in the German provinces of Austria is, so its advocates claim, rapidly developing; and the last quarterly report, published by the Vienna Kirckenzeitung, seems to show that the ratio of conversions is steadily in-creasing. Vigorous efforts are, however, being taken by the clergy of the Roman Catholic Church to check the movement. Recently the combined Roman Catholic episcopacy of the empire published a warning in the form of a pastoral letter, of which the following is a translation:

In our beloved Austrian fatherland we are now experiencing a calamity that cries to heaven and that is a repetition of the most spiteful attacks that have ever been made on the church of Christ. The battle-cry 'Away from Rome!' has been resounding and has found an echo in many quarters. Every faithful Catholic knows that this blatant invitation to desert Rome, the center of Christian unity, endangers his very sonl. For to desert Rome means to descrt Peter; it means a separation from the Catholic Church, which Christ has founded on that man of rock, Peter; it means a separation from God, because Jesus Christ, the Son of God, who became man, has established this church. And it was said by the church father Cyprian, 'No one can have God for a Father who has not the church as his mother.' The authors of this sacrilegious 'Away-from-Rome' agitation aim to make the Catholics of Austria desert their beloved church, to make them traitors to their country. [It is charged that the movement favors a union of the German portions of Austria with the German empire.] When we look at the origin and the methods of this propaganda, it is evident that it is prompted chiefly by a blind hatred for the church and by political and traitorous motives. No pure religious sentiments have anything to do with it, and the most baneful methods are employed. The Catholics of Austria must remain true to the Holy Father and to their Emperor."- Translation made for The LITERARY DIGEST.

This newest of queer religious seem is the "Association of Christian Brethren," which, according to the New Yor Ko. Ko., is "sailing down the Missistappi in a modera initiation of the Arts to tell people that the militarion is surely coming in 1941. "Manyada is in he name of the boat, and endearly one hundred persons, men. women, and children, are about of her. The president of the seet in L. T. Nichois of Minnespolis, and he launched his attention of the control of

#### FOREIGN TOPICS.

## AUSTRALIA UNDER HER NEW CONSTITUTION.

"THE new commonwealth is giving great dissatisfaction all round, and its exponents say the difficulties with the home authorities are so great, and the whisper is going round, and becoming more than a whisper: 'Well, cut the painter!'

Thus writes an Australian correspondent to *The Paily New*. (London); but this feeling is in no way reflected in the Australian press. The Sydney *Mail* does, however, say that the contry is "at last paying the bill for our federal enthusiasm." The same paper says:

"The selection of a site for the federal capital is no further advanced than it was in May last, when The Mail suggested the formation of a Federal Capital League. What was said then should come with greater force now. It was stated that there were in our midst men of much experience in Australian politics who held that the removal of the commonwealth Parliament from Melbourne would never be effected, and that there were others. more moderate in their views, who thought it would not take more than twenty years for New South Wales to obtain the capital which, according to the constitution, is her right. The capital is to be not less than one hundred miles from Sydney, and this restriction, simple the it appears, is likely to retard the work of selection. If the framers of the bill had said that the capital should be in the south or the north, or that it should be not less or more than a certain height above sea level, there would not be so many excuses for delay in the making of a choice. The state being large, so many districts are eligible for the bonor that local influences are being exercised to their fullest extent. . . . That in the formation of capitals delays are likely to occur is shown in the experience of the United States and Canada, The establishment of Washington was a work of stupendous

difficulty."

Of the Australian contingent in the Boer war, the Melbourne

Argus savs: "The cable message announcing that the War Office has quashed the court martial proceedings in South Africa under which three members of the Fifth Victorian Contingent were sentenced to death (a sentence afterward commuted to a long term of imprisonment) will be read this morning with the deepest gratification throughout Australia, and, of course, particularly so in Victoria. This action, it is stated, has been taken in response to a petition to the King from a score of Australians at Clapham. . . . By quashing the proceedings the War Office has done more than to pardon the meu-it has blotted the sentence of death out of the record. It is not pretended or contended in Australia that the men did nothing worthy of censure or punishment. Inciting comrades not to obey orders-fighting ordersin the face of the enemy is a very serious matter. Technically, no doubt, it is mutinous conduct. Absolutely it is indefensible. But on this occasion it was not mutiny in the sense of treachery or disloyalty. The men had not the slightest idea of dishonoring or betraying the flag under which they had previously served What happened was that in a most improper waybut a way that was natural to angry and imperfectly disciplined men-they resented an extraordinarily offensive insult hurled at them, and apparently at all Australians, at a time when they were smarting keenly under the memory of the Wilmansrust disaster-a disaster of which they believed themselves to be the victims rather than the anthors. We may take it that the provocation has been fully considered by the War Office. It is obligatory upon commanders not to use language or adopt measures likely to sting human nature into revolt."

Of the various exclusion bills now before the House and Senate, the same paper remarks:

"The right thing to do is to postpone legislation until it can be based upon the evidence and findings of a parliamentary inquiry. The position is one which may be presented in a very serious fight. Hurry is not an imperative obligation. Kanakas do not constitute any sort of menace to the future of the commonwealth. Asiatics do. Queensland is not lostile to the measure which is intended to exclude Asiatics. She happens to be the state most exposed to that kind of undesirable immigration. But the kanaka is not numerous, is peculiarly adapted to a class of work which hitherto Europeans have shown themselves disinclined to enter upon, is restricted to that work, and is a visitor, not a permanent settler."

The new tariff continues to be denounced by free-trade papers, but the Australian press generally seems favorably disposed toward the principle if not the details of the bill,

#### VON BÜLOW'S REPLY TO CHAMBERLAIN.

As is well known, observes the \*\*Irrondenhatt\*\* (Vienna), in an elaborate elitorial, Chamberlain, "as a means of repeling the criticism in foreign papers aimed at the system of conceutration camps, and similar methods in the South African campaign, pronounced the meastires of other armies in previous wars much more blameworthy." It continues:

"The Chancellor of the empire has now met the wishes of those who demanded that these instinuations be repelled at the earlier opportunity. He frankly conceled that Chamberlain would have done much better, when he was called upon to justify its polyhabat he left foreign countries out of the account allogether. In any event the had no been sufficiently circumspect in recurring to foreign precedents. The Chancellor added that according to foreign precedents. The Chancellor added that according to the sustained with the had received from the other side, 'Chamberlain had wounded the susceptibilities of Germany' without did not go. He did not take advantage of the opportunity to make explanations which might have amounced an extraordingment between England and Germany... and thereby have limited the freedom of action of the German empire."

The imperial Chaucellor certainly foresaw the impression that his utterance regarding Chamberlain would create in England, according to the Voszische Zeitung (Berlin), which says:

"All that he sald regarding the British colonial minister has already been said by ourselves, only with more emphasis, but there is a difference between the uterances of the press and those of a responsible minister, speaking in his official capacity. Chamberlain's outbreak was au act of folly. But it was not directed against Germany alone. It equally affected France, Russia, and Austria. When Chamberlain spoke thoughtlessly count von Bilowa maswered with the consideration. He cannot have assumed that his words would dispose of the matter. He must have taken into account the effect his utterance would have on the British press. He also, doubless, believed that the British initiate would not remain alond. If Eugland's statesmen working else is to be anticipated than a sharpening and a revival of diplomatic caurerés."

On the other hand, the Kölnische Zeitung thinks the incident should be regarded as closed. It says Chancellor von Billow's speech was clear and very much in Mr. Chamberlain's manner. The Frankfurter Zeitung says:

"Diplomisey always makes use of the millest form of words in which its meaning can be expressed. Some may be of opinion that this mildest possible form is not the proper one in which to allude to Chamberlain. . . . To this it may be replied that when the German empire speaks it must take into account not only thenon whom it addresses, but also its own self-respect. If NC Chamberlain does not comprehend the considerate and meritorious language of German diplomacy, there are in England apperhaps-elsewhere persons who will translate the utterance of Count on Billow into somewhat sharper German for him."

The English newspapers, fortified by Mr. Chamberlain's declaration that he has "nothing to take back," oucourage and sustain him, from The Times (London) down. Even the pro-German, anti-American Saturday Review (London) says:

"Count von Bülow's speech has been commended as skilful;

it was certainly disingenuous. He was given just the opportunity which was wanted to set right the bitter misunderstandings between Germany and England. Instead of doing his duty directly as even Bismarck, the prime hater of the English, would have done, he showed an utter subservience to perverted public oninion in Germany. He lectured Mr. Chamberlain for things he never said, merely tempering his lecture with the awkward acknowledgment that he had received assurances-which he was bound to believe-that the insult was unwitting. The proviso suggests the inference that the British Government had offered under pressure some apology for the words of one of its ministers. In fact, no official assurances can have been given."-Translations made for THE LITERARY DIGEST.

#### THE CALL OF CONSCRIPTION IN ENGLAND.

ONSCRIPTION, in the continental sense, will do England no good, in the opinion of the British press. According to the Loudon Spectator .

The only question, therefore, is how to secure effective training for such numbers as will suffice for the work to be done, which is to keep the kingdon permanently safe, and to fill up rapidly gaps in the regular mmy when a sudden emergency calls for its replenishment abroad. There are just three plans which will secure this end, and there are only three. One is the continental conscription, which makes soldiers under command of the whole population, forces them all into barracks for two years. and makes of every state which adopts it a standing camp. That system is opposed, not only to British habits and the whole organization of British society, but to British ideals. . . The second plan is the one which we understand Mr. Rudyard Kinhing to recommend, universal compulsory training for a year without life in barracks, except for three months. . . . The third plan, which we have steadily advocated, is to secure them without compulsion, by steady encouragement in the shape of prizes and honors, by careful and sympathetic training, and by the formation of ranges everywhere upon which they can be constantly exercised and taught,"

There is not, we are convinced, any reluctance on the part of the people of these islands to renounce obligations and to evade duties that other nations have accepted," says the London Times. Yet it declares

"Tho, for reasons that are, in our opinion, conclusive, the continental form of conscription or compulsory service in the army is unnecessary in this country, because ill suited to our needs, the popular feeling is ripe for measures which would go far to

realize the ideal set before 'the Islanders' in the appeal earnestly addressed to them, through our columns, by Mr. Kipling."

"At the same time, it has to be remembered that compulsory service rests on the duty of every citizen to take his part in the work of national defense," says Truth (London) :

"The armies of the Continent are designed, theoretically at any rate, for defense only. Our weapon of defense, on the other hand, is our navy. If, therefore, conscription is to be introduced into this country, it should be conscription for the navy."

#### THE SWAY OF THE EMPRESS-DOWAGER.

THE return of the Chinese court to Peking has fixed the attention of the press of the whole world upon the Chinese Empress-Dowager once more. It is admitted that her hold is as great as ever, but The China Mail (Hongkong) hints at her approaching end:

"Foreigners have little or no interest in the puppers of the Empress-Dowager. She is the real ruler of China's destinies, and were it profitable it might be interesting to speculate on the probable changes that would follow her demise. . . . Considering her age and the trials and tribulations she has experienced during the past eighteen months, and the fact that the court has been traveling from Hsian-fu to Kaifeug-fu in cold and trying weather, it is not surprising that this extraordinary weman's health should have broken down. If it be destined that she should be removed from the arena of Chinese politics at their present interesting stage, there is no saying what changes the present generation might witness in China. The Emperor, weak tho he is, has shown himself a friend of reform, thereby winning the esteem of hundreds of thousands of Southern Chinese who might otherwise have rallied to the standard of a strong revolutionary leader desirous of restoring the Mings. It is almost too good to hope that the Emperor should escape from the power and influence of the Empress-Dowager; but her reported illness points to the possibility of a great and sudden change in the drift of Chinese politics at no far distant date."

"When we speak of the Chinese court we really have the Empress-Dowager in mind." says the Journal des Débats (Paris). adding

"She continues to dominate the Emperor's weak mind. It may be said that she never once ceased to inspire Chinese policy throughout the crisis just ended, and that she will inspire it still more in the future. After having vainly hoped to delude the

PREPARATIONS FOR THE CORONATION

Do you know why Edward's ok is always up to Heaven It is because he dare not look any one on earth in the face.

Powers with her intrigues, after having spun the negotiations out intentinably in order to frustrate them, she finally recogmized that there was no way of escape from the satisfaction denumbed by the civilized world, and she yielded to the inevitable. Hence she permitted the signing of the protocol. Next she consented to return to Peking with the phantom of an emperor whom she drags in her train. Thus commenced, some weeks ago, the iourney of accidents whose varied stages have been set forth in the despatches, and which now ends with the solemn entry of the sovereigns into Peking. . . . But it would be idle to believe that the Empress-Dowager is sincerely reconciled to Western civilization, which has inflicted such deep humiliation upon China and upon herself. She will continue, no doubt, to be hostile to modern ideas and to fight progress in China, just as she will listen more willingly to the advice of the old reactionary party that dislikes foreigners. But there is a gulf between this sullen, natural, and, to a degree, legitimate opposition and that spirit of revolt which found expression in the Boxer insurrection. ern civilization having given evidence of its power, the Empress-Dowager, who is an astate politician, not withstanding her hatred, will see the necessity of bending before this superiority.

"The Chinese adventure might have had a much worse ending," is how Max Nordan sums up the situation in the Neue Freie Presse (Vienna) .- Translations made for The LITERARY DIGEST,

#### EFFECT OF THE POLISH CHILD FLOGGINGS ON THE TRIPLE ALLIANCE.

'HE notion that the Wreschen episode has imperiled the renewal of the Triple Alliance, "or that it could even casually trouble the cordial relations of the united Powers, is too wild to call for serious contradiction." In this way the Pessische Zeitung (Berlin) begins an elaborate editorial on Austria-Hungary and the Wreschen affair. It continues.

"But it is easy to understand why the opponents of the Triple

Alliance would elevate every trifle to the rank of a teason of

THE POLISH SCHOOL-CHILDREN FLORIGED AT WRESCHEN

state, and take advantage of every unlikely occasion to sow hatred of Germany. In Austria, especially in Galicia, there is fruitful soil at hand. And the agitators are at work in Italy, too. . . . It must be acknowledged that the disturbers are on the alert and they know just what they want. But the throw of a stone may disturb a pond, it can not affect the ocean. The Triple Alliance would long since have lost all significance if it could be disturbed by such considerations, or even lightly affected by them,"

The Austrian official and semi-official press scenes to be inspired by similar views. Thus the Pester-Lloyd (Budapest):

"The Wreschen episode, and everything connected with it. may be put aside and buried. The Austro-Hungarian German connection is quite strong enough to stand a puff of wind, as the

POLISH MISCHID VOUSNESS

THE Clerical party, parent of the Poles by adoption, wonders why every one is so angivent the dear Polish child seated in the saddle in front of him and deing to but in to any one. A'ladderadatich (Berlin)

Vicuna saving puts it. Yet it were better if such puffs were spared, for while they do no damage they make a noise,

The alleged personal organ of Count Golachowski, the Austro-Hungarian Premier, namely, the Fremdenblatt (Vienna), says:

"The two governments may be thanked if the echoes of the Wreschen affair in Austrian territory and the discussion of it in both the Austrian Chamber and the Galician Landtag have not in

the least affected the relations subsisting between our monarchy and the German empire. It may be taken for granted that the Wreschen affair will be steered out of the channel in which the politics of the two allied states move in perfect security. That the Wreschen episode and the agitation of Polish untional sentiment to which it has led will not remain without echo in Austria, is due to the large Polish population in Austria and to the national character of Galicia. . . . But that the echo is not louder is due not only to the attitude of both governments. but to the intimate union connecting Austria-Hungary with the German empire, a circumstance which renders possible a consideration of all complications with perfect calm and impartiality."

The press of that third member of the Triple Alliance, Italy, has nothing in particular to say on this aspect of the Wreschen affair. The Tribuna (Rome) does deplore the flogging and calls attention both to the death of oue of the children and to the appeal of Polish women to the sympathy of mothers all over the world. It warns Germany to heed and

to be humane, but gives no intimation that the "Triplice" is thereby endangered .- Translations made for THE LITERARY DIGEST,

#### THE GRAND OLD MAN OF JAPAN.

"A S the Marquis Ito has passed from one capital to another, the object of deference and attention in Washington, in Paris, in St. Petersburg, and in Berlin, he may well have felt that the end crowned the toil," says The Standard (London); and in a similar strain The St. James's Gastefe observes.

"The greatest man in Japan is closing up the old year in Lonon. The Marquis Ito deserves the highest fame his country can give him. He has been ranked with Gladstone and Hismarck, and whatever there may be of merit in the comparison, the Marquis is unquestionably one of the world's wise men. It was he who forecast the invasion of the West, and saved Japan was the who forecast the invasion of the West, and saved Japan his name is hailed as that of the savior of his country, the framer of its constitution, the leader of progressive Japan."

If we turn to that high authority on Japanese affairs, the Nobellerald, of Japan, we find it declaring that Ito's tour is of "considerable interest to us in Japan, who do not see the Marquis and his work through that haze of distance which magnifies or distorts both in the eyes of American and European observers." And of the net result of the travels of "the grand old man" the same names as the superior which is the superior when the superior we have the superior which is the superior when the superior we have the superior when the superior we have the superior when the superior when the superior we have the superior when the superior when the superior we have the superior when the superior when the superior we have the superior when the superior when the superior we have the superior when the superior when the superior we have the superior when the superior when the superior we have the superior when the superior when the superior when the superior when the superior we have the superior when the superior

"We may expect to see Marquis Ito return with renewed seal in the cause of representative institutions, satisfied that his fellow nationals are most likely to realise their worthy ambitious in the ever-expanding fields of industry, commerce, and art under the free and enlightened conditions of life which a constitutional system of government insures. If this surmine is sound, as we trust events will prove it it, then we may confidently expect the great Choshin leader to devote the remaining years of his political point of the properties of the event of a truly representative political system in which the country's real leaders will be responsible to the country at large."

#### THE FLAG AFFAIR AT KOWEIT.

THE flood of editorial discussion relating to the Persian Gulf and its destiny, with which European newspapers are filled, has been fed in a fashion thus outlined in the London Speaker:

"At Koweit, in the Persian Gulf, an incident has occurred which might, were our diplomacy less hampered than it is at this moment, prove to be of some considerable consequence. As it is, a mere recital of the facts is sufficient to show that we can obtain no advantage in the difficulties that surround our action in that quarter, and that at the best we shall leave the place as we found it. Koweit is to be the terminus of the Bagdad Railway, a German enterprise. The Sultan (who has been consistcutly supported by Germany since 1896) asked, apparently spontaneously, for an affirmation of the very vague suzerainty which he exercises over the Sheik of Koweit. He demanded his presence and obeisance in Constantinople. The sheik, Marabout, by way of answer, hauled down the Turkish flag and substituted a private emblem in its place. It was asserted that this action was due to the orders or advice of our own authorities, the cruiser Pomone and the gunboat Redbreast being then in the port. The new Prussian cruiser Varinig thereupon arrived upon the scene."

A great future is in store for Koweit when the railway is built, asays the *Journal des Jibbast* (Paris), and it can not be suffered to become a British dependency without serious consideration. The editorial protests of the *Novoye Vermya* (8t. Petersburg and other Russian papers have been neutralized by the attitude of the Cara's Government. A luminous editorial in *The Friend of India* (Calcutta) says:

"The Persian Gulf is vital to Great Britain and to India. If Russia were to accomplish what she undoubtedly aims at, namely, the establishment of her political supremacy in an unbroken line from her present frontier down to any convenient point on the Persian Gulf, it would have the effect of a wedge driven between Great Britain and India. . . The whole question of the Persian Gulf is further complicated by recent events occurring at Koweit. Exactly what has happened there recently is not yet known, but apparently it has been the policy of Lord Lansdowne to protect this little state from Turkish aggression, while at the same time appeasing the Sultum by recognizing that he possesses a kind of suternity. Like many other places on the Persian Gulf, Koweit occupies a very doubtful international position."

The same paper declares that British war-ships are only near Koweit for the purpose of 'policing the Persian Guilf." I shall that in the performance of this international duty the various English cohinests 'have insisted that, however much the Arabin sheiks may fight with one another on shore, they are not to engage in naval warfare lest neutral consucrees should sinfle much their hostilities." The following considerations must also be taken into necessity.

"In the course of a hundred years Great Britain must have expended several million pounds and a good many hundred lives in securing the effective peace of the Gulf. The greater part of that valuable work would be thrown away if she were now to relax her control and to allow Turkish officials to pretend to take over the duties that are now so effectively discharged by British naval officers. At the same time it is most undestrable that we can be suffered to the same time it is most undestrable that we care territorial advantages for ourselves. If, for example, we were to seize Koweit, as some hot-headed English journalists have suggested, such action would create a precedent which other Powers would immediately initiate, just as the science of the Russia. "Turking the most for The LITERARY DIVESTA."

#### NOTABLE BOOKS OF THE DAY.

## A PSYCHOLOGICAL STUDY OF RELIGIOUS

PHENOMENA. THE SPIRITUAL LIFE: STUDIES IN THE SCIENCE OF RELIGION, BY George B. Coe, Ph.D. Cloth, 5 x 71/2 in., 278 pp. Price, \$1 on. Enton &

Mains "HE phenomena of religious experience have been the last to be

granted a hearing by the science of psychology." This author speaks for the psychological method in the examination of religious experience. He seems to have derived some hints of the details of this method from Starbuck's "Psychology of Religion," upon which, however, he has considerably

improved. The connection made by Starbuck between adolescence and the first awakening of religious experience Professor Coe has enlarged upon, and turned in somewhat different directions. All his tables, however, generally correspond. By these two presumably independent investigators, the age of puberty and the time of religious awakening are shown closely to correspond. This fact will be soon taken as established by students of psychology. Professor Coe's most interesting study, however, is, so far as we are aware, a new one. It is the investigation, through cases actually questioned, of the relation between temperament and spiritual-

ity. So far as his investigation coes he seems to have demonstrated that religious transformations are favored by a sangnine temperament, expectation, hallucinations, and passive suggestibility to automatism, and

are most likely to occur when these are present in combination. The author's limits on suggestion and the relation between religion and physical health are not new, but are in line with the psychology of to-day. His frequent caution in discriminating his method from all metaphysical assumptions as to the part played in religion by divine forces will be valuable to those who have sometimes supposed that we could not exhibit the natural and physical elements in religious experience, without seeming to deny God's agency. The author clearly points out, on the other hand, the advantage to religion of understanding all the natural factors, and of recognizing as fast as possible the order and law of religious experience. Very little has been accomplished as yet in reducing religion to an intelligible and orderly process, but every attempt of this kind is preparatory to some forthcoming philosophy of religion, from the psychological point of view. Considered as a contribution to such a future work, this little book has value. For the rest, ministers ought to possess themselves of this material and follow its more important hints, that serve for the time being as a guide to the study of conversions and related religious phenomena.

#### TALES OF THE RAILROAD.

HELD FOR ORDERS. TALES OF RAILROAD LIFE. By Frank II. Spearman. Cloth, 5 x 7% in., 359 pp. Price, \$1.50. McClure, Phillips & Co

HIS book of stories has three prominent defects, to begin with: an exceedingly tasteless cover; an eccentric style, that is often animated, but more often confusing and annoying; and a lack

of consideration for the uninitiated reader in the using of technical words. But there are merits in the book to balance these things, and more.

They are stories of railroad life, told by a man who knows it thoroughly, with all its possibilities of picturesqueness and excitement. One gets a very good idea from them of the responsibilities and the trials of the engineer and the train-despatcher. Most of the stories are worth reading and one or two of them are really splendid. The story of Hailey, the bridge-engineer, who goes down in a wreck on the bridge he was not allowed to build as be wished, and of "Selarco," the silent fireman who sticks by his engineer, are as good railroad tales as one could wish. They have humanity in them; one gets some of the

FRANK H. SPEARMAN.

pathos of the lives of these faithful men, with their grim tasks and their tragic fates; and that, we imagine, is the best that could be asked of a railroad story. The closing narrative, of the fireman who is wrecked on the fast mail that is being rushed, and who takes the mail in a freight-train that stands near, is also very stirring. The author shows numerous traces of Kipling in these accounts, but then so do all new authors who tell stories about Kipling's subjects.

We have spoken of the best of the stories. They are very neven in quality-two or three running into cheap sensationalism. ing story is particularly unfortunate in this respect, and might, with the help of the cover, turn many from the book. We have read quite often before of the mild, silent man who enters the border saloon, and is forced by the bad man to "dance"; we know that he will make the bad man regret his badness, and just how it will be done.

#### ONE OF THE FLESHLY SCHOOL.

HAWTHORN AND LAVENDER; WITH OTHER VERSES. By William Ernest Henley. Cloth, 31( x 2), in , 113 pp. Harper & Brothers.

M. HENLEY is one of the "fishly school," and for those who like that sort of thing, there is plenty here of the sort they will like. But for some of the rest of us, who see something else in life and nature than lust, and find something better to meditate on in our thoughtful moments than death and decay, a volume of verse chiefly devoted to these subjects grows monotonous despite an undeniable vigor of expression and technical skill. "My songs are now of the sunset," says Mr. Henley in his "Envoy" (there are a "Prolog." an "Envoy," and a "Præludium"), and the sunset is not a very glorious one. In one poem (p.

lxxxviii) we get this: In that great duel of sea, that ancient

Which is the very central fact of life.... and again (p. xxxiv):

Love, which is lust, is the Main of De-Love, which is lust, is the Centric Pire.

. the marvel of earth and sun is all for the toy of woman and man And the longing that makes them one.

And still again (p. xxxv):

Mr. Henley is capable of splendid work ; but in this volume he follows the changing procession of the year from month to month, and nearly everything suggests to his mind the idea of procreation; and that when

WILLIAM E. HENLEY.

that is ended everything is ended. There is a baker's dozen of short poems on "London Types" of which this may not be said; but even they are types of low life,-the Bus Driver, the Hawker, the Bar-Maid, the Sandwich-man, etc.,-the types of London's decay rather than of London's vigor. There are also a number of memorial poems that are fine in many of their lines, and that sound the patriotic note with large, the not persuasive, sincerity. For a sample of the London types, take this : 1.174

> "Liza's old man's perhaps a little shady. 'Liza's old woman's prone to boose and cringe; But 'Lara deems berself a perfect lady. And proves it in her feathers and her fringe. Por 'Liza has a bloke her heart to cheer, With pearlies and a parrer and a tack. So all the regetables of the year Are duly represented on her back Her boots are sucrifices to her buts. Which knock you sperchless - like a load of bricks! Her summer velvets dazzle Wanstead Flats, And cost, at times, a good eighteen and six. Withal, outside the gay and giddy whirl, "Lina's a stupid, straight, hard-working girl.

That is not high work, but it is genuine.

#### THE RING OF TRUE METAL.

THE COLOR OF HIS SOUL. By Zoe Anderson Norths. Parchment cover, 3% x 7% in., 210 pp. Price, \$1.00 net. Funk & Wagnalts Company.

HE author of genius is the man behind the book. The author of talent is the man in the book. The genius dominates his work, according the rhythm of his materials to the key of his own nuture. Talent, on the other hand, accommodates its rhythm to the key

of the subject. "The Color of His Soul" is a work of talent. There is no underlying master melody, yet the whole of the little composition is as janglingly musical as a string of sleigh-bells which somehow chime with the surrounding elements, the tonic air and the

glittering light. This is the result of inborn literary taste; it is the ring that was cast simultaneously with the bell metal. This pure literary tone is found in everything to which the name Zoe

Anderson Norris has been appended. Heretofore her writings have been newspaper and magazine sketches, none of which have had sufficient plot to be ranked as stories proper. And, indeed, in this her first book, she has not really achieved a novel. To make the "novelette" she has simply selected a number of sketches of personal experiences, which are related to each other solely through the fact that

they had the same observer, and has strung them loosely together in this common bond, bringing with a enap the first and final incidents together. Then she has thrown the sweetly jangling circlet over her Pegasus, cracked her whip to the public, and is off to the crowded literary speed-

That she will lead the procession of distinguished authors is doubtful, but that the smartness of her style will "eut a dash" is beyond question

The two sketches of the book that are united to give it title relate, one to a young Socialist who is repreented as led away by the theories of Dr. Herron, and the other to a girl dying in child-birth in a maternity bospital. There is dramatic power

ZUL ANDEMSON NORMES Photo by Marceau, New York.

in the closing scene where the callow enthusiast, the denouncer of the wrongs wrought by the capitalists upon the "wage-slaves," is revealed as the betrayer of the dying seamstress, and one who has even preyed upon her earnings.

#### A PASTOR OF THE OLD SCHOOL.

JOHN HALL, PASTOR AND PREACHER, A Biography by his Son, Thomas C. Hall. Cloth, 5½ x 5½ in., 14c pp. Price, \$5.50 net. Pleming H. Revell Company.

OR thirty years, Dr. John Hall was an acknowledged leader in American church life, and his son, Prof. Thomas C. Hall, of the Union Theological Seminary, New York, has brought together in this biography the salient facts of Dr. Hall's ministerial career, as well as of his earlier life in Ireland. A visit to the United States in 1865, as a delegate to the American Presbyterian Assemblies, led to his call from Dublin to New York. His success in his new sphere of work was instantaneous and crowds flocked to hear him. "I have begun with ordinary sermons," he wrote to a friend at this time, "that I might not pitch the standard of expectation higher than I could honestly keep up.-have eschewed all attempts at sensationalism, and told the people that our reliance must be upon the steady, patient teaching of divine truth." During his long pastorate in the Fifth Avenue Presbyterian Church, Dr. Hall won for himself a unique place in the religious life of New York, and his activities were only curtailed by failing physical powers and by the peculiarly discressing circumstanceslargely the result of the Warszawiak controversy-which clouded the last days of his life.

Yet even if his energies had not failed, and if his zeal for the conversion of the Jews had not aroused the opposition of certain influential members of his congregation, it is probable that Dr. Hall's popularity

would have waned. He represented a type of pastors who, while still the favorites of evangelical congregations abroad, do not, in their old age at least, strongly attract the present generation of American churchgoers. A young man, especially if he be stalwart in appearance and earnest in manner, may he norular because of his old-time homiletic methods; but a preacher who is advanced in life must be advanced also in his methods for arousing interest among the pewholders, or run the risk of being

#### IN THE FORBIDDEN LAND.

ADVENTURES IN TIBET. Including the Diary of Miss Annie R. Taylot's Remarkable Journey from Tau-Chau to Ta-Chien-Su, through the heart of the "Porbidden Land." By William Carey. Copiously illustrated, Cloth, 51/x 8 5/2, 285 pp. Price, \$1.50 met. The United Society of Christian Endeavor, Boston and Chicago,

R. CAREY, a Baptist missionary in India, great-grandson of that William Carey who was the pioneer of modern missions. and himself a leader in the foreign work of Christian Endeavor, being ordered north by his doctors (in July, 1899), spent a month in Sikkim, that wedge between the three "closed lands" of Nipal, Bhutan, and Tibet. It was his happy chance to cross the Jelep Sa into Tibet; and there, in her famous shop in Yatung, he found that cheery little woman from Cheshire-dauntiess, resourceful, a miracle of pluck patience, and fortitude, good sense and sagacity, marvelously blended with childlike simplicity and guildessness, - who erept into Tibet through a Chinese gate and, practically alone, groped her way through the secret places of that dark and dangerous land which had remained "simply a blank, or a blind eye, on the maps of the world." Her audacity makes one hold one's breath. There is nothing to equal it in the whole fascinating story of way-making in Tibet. quaintly pathetic in its simplicity I how surprising, how amusing, in its unpreparedness!

And her extraordinary Diary 1 The very artlessness of it is not the least of the wonders of that great little woman's ways. It is such a brief and telling itinerary as an American school-girl might once have jotted down, as she jogged in a "prairie schooner" from Chicago to Denver. Not until the entry for the day had been written would that plucky little bundle of unconscious heroies-numbed and jaded as she was-consent to burrow in her sleeping-bay under a tent or in a cave.

And when at last the tent had been taken from her, and no cave was to be found, she "lay her down to sleep" in the snow, with no roof but the sky, "What a comical little bundle it must have been." remarks Mr. Carey, "for the merry stars

to wink at !! "A book for anybody to read." No technical details, no scientific pretensions, no notes of strenuous exclamation i When she stole through that gate in the wall, and plunged into the darkness and the terrors of Tibet, she had a pistol, and it might have happened so that she would have to shoot it; but it had been packed in the baggage, and played no part in that white woman's burden. She had a say glass for the spying of brigands afar off; but the brigands swarmed about her, "so close and so often (she was twice under fire) that looking for them at long range would have been an absurd superfluity." She had a watch; but she was forever trying

to swap it for a tent or a tat. No ther-DRESS. mometer, no aneroid, no theodolite was hers; she toiled over unmapped mountains, and jogged through unknown valleys, "obbytons of the claims of science, and constrained only when something went wrong with her chang to notice the boil-inomoint." Says Mr. Carey:

MISS TAYLOR IN TIBETAN

"These blurred pages [of her Diary], what a tale they tell ! There is

And so, by sheer force of astounding helplessness, and the overcoming audacity of a childish trust, she made her way through that wild theater of mystery and awe and fear, where the lama, however loathsome and revolting, holds the people in the holle w of his hand, with his trumpet of human thigh-bone at his lips, and a skull in his defiling grasp--made her way for many months, undaunted, disappulled, even cheery, even droll, building up that wonderful Diary with the persis-

some meaturn or privations and perils, but how much more that is not mentioned can yet be plainly read in the quivering of the lines, in the sunny expressions of hupe and trust! It was a light shining along the path, a fire hurning in the bones. But the light was 'a light in the dark land of Galilee,' and the fire was a flame from the passionate heart of

tence of a saint and the artiess cunning of a suckling Mr. Carey's part in the handsome volume, making half the bulk of it, Is eminently reverent and sympathetic, his enthusiasm justified by intlmate knowledge and a tried devotion. His preliminary chapters, descrining the land and the people, are marked by graphic picturesqueness and occasional strains of spontaneous eloquence not less impressive than entertaining. The resulting book is something more than a surprise and a delight; it appeals to the reader with the force of a prophecy and a revelation-as of a little brown wrea, hopping and twittering over the snow on the "Roof of the World," and bearing in her beak a straw from the stable at Bethlehem.

That a defenseless, trusting woman has succeeded where men of cunning and resource have failed, is a good omen for the Christian conquest of Thibet.

## CURRENT POETRY.

#### From "Hawthorn and Lavender"

By WILLIAM ERNEST HENLEY.

[See THE LITERARY DIGEST, October 5, 1901, for further selections ]

The wind on the wold,

With sea-scents and sea-dreams attended, Is wine ! The air is as gold

In clixir-it takes so the splendid Sunshine !

O, the larks in the blue ! How the song of them glitters, and glances, And gleams!

The old music sounds new-And its O, the wild Spring, and his chances

And dreams There's a lift in the blood -

O, this gracious, and thirsting, and aching Unrest ! All life's at the bud.

And my heart, full of April, is breaking

Look down, dear eyes, look down, Lest you betray her gladness. Dear brows, do naught but frown, Less meu miscall my madness.

Come not, dear hands, so near, Lest all besides come nearer. Dear heart, hold me less dear, Lest time hold nothing dearer.

Keep me, dear lips, O keep The last greet word paspoken. Lest other eyes gn weep, Lest other lives lie broken!

XXVI.

June, and a warm sweet rain : June, and the call of a bird : To a lover in pain What lovelier word?

Two of each other fain Happily heart on heart : So in the wind and rain Spring bears his part!

O, to be heart on heart, One with the warm June rain, God with us from the start, And no more pain!

#### Poems.

By ARTHUR SYMONS.

fOf Mr. Symons' verse the London Academy

"Mr. Symons is an experimenter in life; and, according to the burden of his song, experimentation has brought sanety. His aim has been the impressionistic aim of a certion school of French poets, and especially of Verlaine, who has so strongly influenced some of our younger writers, The art of capturing an impression emotional or visual, or both and fixing it in a few words as evanescently delicate as the impression itself, is the art pursued by Mr. Symons."

#### THE OPIUM SMOKER.

I am engulfed, and drawn deliciously, Noft music like a perfume, and sweet light tiniden with audible colors exquisite, Swathe me with cerements for eternity, Time is no more. I pause and yet I flee, A million ages wrap me round with night, I drain a million ages of delight. I hold the future in my memory,

Also I have this garret which I rent. This bed of straw, and this that was a chair. This wormout body like a tattered tent. This crust, of which the rats have eaten part This pipe of oplum ; rage, remorse, despair ; This soul at pawn and this delirious beart.

#### THE PRICE.

Pity ail faithless women who have loved : none knows How much it hurts a woman to do wrong to love.

The mother who has felt the child within her Shall she forget ber child, and those ecstatic

Then pity faithless women who have loved : these

Municred within them something borne out of

These mothers of the child whom they have loved end slain

May not so much as lay the child within a grave,

#### The Return,

By JOHN BURROUGHS.

He sought the old scenes with eager feet -The scenes he had known as a boy ; "Oh! for a draft of those fountains sweet, And a taste of that vanished inv."

He roamed the fields, he mused by the streams

He threaded the paths and lanea; On the hills he sought his youthful dreams, In the woods to forget his pains

Oh, sad, sad hills ; oh, cold, cold hearth ! In sorrow he learned thy trut!

One may go back to the place of his birth, -He can not go back to his youth

-The Independent.

#### PERSONALS.

When Crispl was Lucky in Heling Penniless,

—The late Francesco Crispi, the great Italian
statesman, once escaped arrest as a revolutionist
because he did not have a sou wherewith to buy a
candle. The story is told in the Courrier det
First. Cinc. (New York):

"On January 14, 1858, Prancesco Crisps, the recently deceased Italian statesman, then a political refugee in Paris, received from an Italian friend connected with the Paris opera two gallery tickets for the performance of that evening, which the Emperor and Empress were espected to attend. Crispi and his wife were on the point of starting for the theater when the latter exclaimed : "Francesco, where shall we get a candle?' They were in such destitution that they had neither candles nor matches, nor yet the wherewithal to buy them. Going to the opera would involve groping for their room at midnight and going to bed in total darkoess. Too proud to confess their condition and to borrow a few sons they regretfully denied themselves the promised treat, remained in their room, and retired before the twilight had

"On the following morning they learned of Orsin's attack on the Emperor, the police raids, and the arrest of all Italian revolutionists found in or near the theater. If Crispi had been in the house he would certainly have been among the first arrested, for he was known as an ardent disciple of Marxiol.

"The possession of a tallow candle and a match might have altered completely not only his own destiny but also that of Italy!"—Translation made for THE LITERARY DIGIST.

M. Menier and Chocolate Ialand,—When M. Menier, the French chocolate manufacturer, bought the island of Antiquoti, in the month of the St. Lawrence River, Canada was somewhat alarmed, fearing that it might be a hostile move on the part of France. These fears, however, have since been entirely allayed. Says the London Extensis.

"M. Menier paid £35,000 for the exclusive possession of Anticosti. The romance of the thing appealed to him, and when its two million acres were offered he scarcely hesitated.

"Anticosti was not uninhabited when Menier took possession. Here and there along the coast, and principally at the little harbor of Pox llay, were a dozen or more families that had earned a precarions livelihood at fishing for twenty-odd years.

"These settlers bore no title to the land occupied by them, simply living there on the sufferance of the previous owners and at a nominal rent. They contented themselves with fishing, and made little effort to till the soil.

"When the purchase became known strange takes of political complications appeared in the press. One paper claimed to have proof that incritifications were being rerected by night, and that a formidable battery of modern guns was about to be landed from a strange vessel which had mysteriously appeared in the Gulf of St. Lawrence.

"There was, indeed, a series of earthworks back of the town of English Bay, now called Hai Me. Claire. The interior of these earthworks wan filled with barrals of flour and beef and other pro-

"These are our fortifications," smilingly exclaimed M. Landrieu, the chief of the commercial board of Anticosti, appointed by M. Menler, "We fortify ourselves thus against hunger in case our main stores are destroyed."

"Notwithstanding dissension within and bitter racial accusations without, Menier calmip proceeded with his plans. Through his legal adviser in Quebec he went to law, and after a sensational trial the Fox Bay settlers were ordered to leave the Island.

"The decision was followed by a storm of protest from the press and part of the Canadian public.

able, a collection was taken up for them.

"Menier's plans for the island are broad. They include the building of towns, the construction of roads and railways, the building of a deep-sea port, and the development of the natural resources of

"A fair start has been made. The old settlement of English Bay, which consisted of a few scattered fishermen's buts, is now the seat of anthority on the island. A regular town has been laid out, with streets, a plaza, sanitary plumbing, school, and all that goes to make up the modern community.

"It is an important part of Menier's plan to surround himself with thoroughly competent men The scheme of administration includes a governor, M. Comettant, who was born in New York, and parious chiefs of service

\*Under these directors of department are many skilled workmen and laborers, the whole making an admirably organized force Menier is, of course, the absninte dictator of the island."

#### MORE OR LESS PUNCENT.

The Girl Tryer.-By ETHEL HOWELL. A girl there was and she talked each night (Even as vau and I)

T o a suit of ciothes and a necktie bright. When the tide of her satire was at its height She called this object her "Beited Knight" (Even as you and I).

Oh, the smiles we waste and the wiles we waste And the lokes that we thought so grand, Helong to the man who had no sense, And now we know that he never had sense And could not understand

A girl there was and she spent her wit (Even as you and I), Humor and fun and a clever hit. And he never did see the point a bit. So the girl inst mentally classed him "It" (Even as you and I).

Oh, the hits we waste and the wits we waste. And the excellent things we planned. Helong to the man who was so very dense And now we know that he aiways was dense And never could understand.

The poor girl talked till she nearly died (Even as you and I), And many a yawn she had to hide Which he might have seen if he'd nuly tried. She got so sleepy she nearly cried

(Even as you and i). It isn't the bore - we've stood that before -That makes na rise in our might. It's coming to know that he never did know,

It's learning at last that he never could know And never did see we were bright. - For THE LITERARY INGEST.

His First Profits THE VISITOR: "Horrors! the lightning express wrecked and totally destroyed by fire!" YOUNG ARTIST: "Harrah! Good!"

VISITOR: "Are you crazy?"
ARTIST: "No, but I expressed a drawing on that train and I valued it at fifty dollars. Now

the express company will have to pay for it."-Life. Unirks and Quibbles. - It is easy for the light-

headed to be light-hearted. He who confesses that he ijes, ijes ; he who denies that he lies lies twice.

We admire the man who will listen to reason because he gives us a chance to talk. Most of us know only one man whom we regard

as absolutely fair and unbiased, and modesty prevents as from naming him, I at a man imagine he is having his own way and a woman can do anything with him; iet a woman

but suspect she is having her own way and a man can do nothing with her.

What a pity that most of our most brilliant and original ideas did not present themselves to us

Most men would find it a difficult matter to tell all they know; not that they know much , but the difficulty would rise in trying to winnow what they do know from what they unagine they know. If a man is always as old as he feels, many men pass from youth to old age in a single night-from the evening before to the morning after

first.

## Are Quick To See

Good Doctors are Quick to See and Appreciate Real Merit in New Medicines.

Stuart's Dyspepsia Tablets are a discovery of great value to the medical profession and the public. They are an unfailing specific in all cases of dyspepsia ar isordered direction.

Almost everybody's digestion is disordered to es and the commonest thing they do for it is to take some one of the many so-called blood purifiers. which in many cases are merely strong cathartics, uch things are not needed. If the organs are in a clogged condition, they need only a little help and they will right themselves. Cathartics irritate the sensitive linines of the stomach and howels and often do more harm than good.

Purging is not what is needed. The thing to do is to put the food in a condition to be readily digested and assimilated. Stuart's Dyspepsia Tablets do this perfectly. They partly digest what is eaten and give the stomach just the help it needs. They stimulate the secretion and exerction of the dignetive fluids and soliers the concested condition of the clands and membranes. They put the whole directive system in condition to do its work. When that is done you d take no more tablets, unless you eat what does not arree with you. Then take one or two tabletsgive them needed belp and you will have no trouble. Its a common-sense medicine and a common sense treatment and it will cure every time. Not only cure the disease but cure the cause. Goes about it in a

perfectly sensible and scientific way. We have testimonials enough to fill a book, but we

don't publish many of them. However Mrs. E. M. Faith of Bird's Creek, Wis., says; "I have taken all the Tablets I got of you and they have done their work well in my case, for I feel like a different person altogether. I don't doubt if I had not

got them I should have been at rest by this time. H. E. Willard, Onslow, Ia., says: "Mr. White of Canton, was telling me of your Dyspepsia Tablets curing him of Dyspepsia from which he had suffered for eight years. As I am a sufferer myself I wish you to send me a package by return mail.

Phil Brooks, Detroit, Mich., says: "Your dyen cure has worked wonders in my case. I suffered for years from dyspepsia but am now entirely cured and enjoy life as I never have before. I gladly recom-

It will cost 50c, to find out just how much Stuart's Dyspepsia Tablets will help you. Try them-that's the best way to decide.

All druggists sell them. A little book on stomach diseases will be mailed free by addressing F. A. Stuart Co., Marshall, Mich.

## STRONG NEW PHILOSOPHY

TWO BOOKS FOR MEN AND WOMEN OF TO-DAY WHO CAN THINK AND ACT

The Author is CHARLES FERGUSON

OF WHOM THE CRITICS SAY:

"He probes as deep as Carlyle, and smites with the strength of Ruskin."

— Boston Transcript. "Since Emerson, accordy has gone so straight to the point "- Washing-ten Times.

"The author probes the very heart of life. He has all of Emerson's fucidity and vigor, and all of Whitman's onthusiasm." - Boston Journal,

"Mr. Ferguson's high aim is to preach an elequent gospel of optimism is human life and of faith in the power of truth." - Philadelphia Record.

"He sounds a trumpet call to those who stand shivering upon the brink of the new detacture fearing to advance."—How. John E. Repers, Governor of Washington,

THE TWO BOOKS ARE

## The RELIGION OF DEMOCRACY

The AFFIRMATIVE INTELLECT

THE KEYNOTE OF THE BOOKS

The logic of history requires the rise in the United States of a Democratic Catholic Church that shall identify the tradition of Christianity with the spirit of the University and the Democratic ideal.

THE **AUTHOR'S** MESSAGE IN A WORD

#### THE FIRST BOOK:

Foundation principles for men of the modern spirit,

"It is a great book. It clearly belongs, as do few books in a century, to the prophetic literature of the world."-Philip S. Masom, D.D.

This book brings us face to face with the ideals toward which democracy has been groung through the ages. It makes plain the close relations in which the individual man is bound with the universal - the universal divine, the universal human, and the universal material. "No man liveth to himself, and no man dieth to himself." He must know what these relations He must understand clearly what is rightly expected of him and what he should rightly expect. Misconception in these things has too long caused confusion. Man's destiny is high, but he can not reach it without touching other men, any more than he can reach it by sitting still. There is no par lor-car route to his high esiste. Charles Ferguson in his book, "The Re-ligion of Democracy," makes a pica for the strenous life; for the appro-priation and the use of the real in man and the real in nature, for the accomplishment of man's high destiny. The author believes is the present, and exclaims. "You have great deeds to perform and you must do them The book is a protest against empty and cumiersome forms and superfluous organizations. It is a pica for the sovereignty of the human ideal over the irrational and fatal elements of the world.

#### THE SECOND BOOK:

For the two classes of men who wage the real battles of history, I. POSITIVE.

"The men of affirmative and creative intellect, who are dominated by the ideal—never for a moment abandoning the heart's desire and the inner law of humanity." II: NEGATIVE.

"The men of negative and passive intellect, who are cowed by the ap-pearance of things and prostrated to an external law."

THE MESSAGE IN THIS BOOK comes with ringing tone to both as classes. It is exhibitanting and sympathetic to the one. It challenges

TLR HUMANITY IN DIVIDED INto the two closure. In one class we have a superior of the class of th

TO WHICH CLASS DO YOU BELONG? If you are among those of the aftisastive ostelled you will find delight and atomitis in the book named above. If you are of the negative, peasive, non-assertive class, you will find in the look a new light, a vigorous and hely call to come out and up to a nobler-field of life.

## A FEW SENTENCES FROM A "CLOUD OF WITNESSES"

Readers, critics, philosophers, practical idealists everywhere have hailed the books with embusiasm. Many leading newspapers have devoted whole pages to reviews of the books. Just a few sentences will show the general tenor of

"By his two works, Mr. Ferguson has undoubtedly placed himself in the category of the philosophers of the age, whose writings will be read by generations yet unborn."—St. Paul Disputch, St. Paul, Minn.

"It differs from the current nocloder as Carlylyde Arench Revolution differs from the history of the schools. It has a prophetic, an opic character,"—Howeve Hodgen, D.B., Dean Episcopal Theol School, Cambridge, Mass.

"An admirable book,"—Edward E, Hale, D,D, LLB.

"It is a cisrion call to a higher civilization."— Ella Wheeler B Hees. "This is one of the most remarkable books that have been published for a long time."—Ex-Ges, John S. Allgeld, Chicago.

"Thousand or rolumes are pouring yearly with the press, and a long internals we get one as eye, longith, high sericonenes, upfring has not as eye, longith, high sericonenes, upfring has not. The Religion of Democracy is worthy of pince with Lamensnia's Words of a Reliever, pince with Lamensnia's Words of a Reliever, Faith and the Future. It is a during titlergane claring in lite resolute appear to the primary editions. It is a great book of a great epoch." Exident Markhon, Brooklyn, N. Y.

"This is a bold book. If has been rarked as one of the books of the century,"—Michigan Christian Adesenie, Detroit, Mich.

"It is a brill'ant, searching book that reminds use of 'Sartor Resartus.'"—Threadore T. Mun-ter, D.D., New Haven, Conn.

"On every page I find something as felicitous as Emerson, sounder than the economists, and truer than the preachers."—Henry Bemaryst Lloyd, Boston, Mass.

"He has all of Emerson's jucidity and view, the he is less orthoder than the Concord philoso-pher, and has all of Whitman's enthusiasm, the he is less of the herroit at diess of the eroits, than the author of 'Leaves of Grass.'"- Boston Journal.

"Starting out to read it, you begin by marking paragraphs that strike you as being unusual, as you find yourself marking airaight through the chapter. "The Religion of Democracy" was written by a man of gestus."—Allanta News.

"Scholars and philosophers have given 'The Religion of Democracy' a cordial welcome."— New York Press.

"It is sure to take a place in the higher litera-ture of r ligion, politics, and society."—84. Louis Post-Desputch.

"Mr. Ferguson's sole and high aim is to preach an eloquent groupel of optimism in human life and of faith in the power of truth. The reading of this work is not only a literary delight, but as well, a keen inselectual and moral toolo."— Philadel-phila Record.

"Its interest is enchaining, and it is almost impossible to lay the book down, for one is hur-ried on from pare to page "— The Evening Tele-graph, Philadelphia.

"Probes as deep as Carlyle, and emites with the strength of Ruskin . . . It will make a pro-found semation "—Boston Transcript.

"Since Emerson, nobody has gone so straight to the point,"—Washington Times. " It is a remarkable book."- The Inter Ocean,

"... He is a voice speaking unfamiliar things, with good emphasis and discretion, and to singular issues. It bilkely to seemany other editions."

—Julian Hanthorne, in The North American,

"It is a book deadly and dreadly literal a 'd yes, at the same time transc-identially raisbowed. The fast that Ferguson is book in gridging to edition after another is significant. This man it is a superficient of the superficient and the s

## The literary Digest

It is almost as hard for an old coffee toper to quit the use of coffee as it is for a whiskey or tobacco fiend to break off, except that the coffee user can quit coffee and take up Postum Food

Coffee without any feeling of a loss of the morning beverage, for when Postum is well boiled and served with cream, it is really better in point of flavor than most of the coffee served nowadays, and to the taste of the connoisseur it has the flavor of fine lava.

A great transformation takes place in the body within ten days or two weeks after coffee is left off and Postum Food Coffee used, for the reason that the poison to the nerves has been discontinued and in its place is taken a liquid that contains the most powerful elements of nourishment.

It is easy to make this test and prove these statements by changing from coffee to Postum Food Coffee.

## Wash Fabrics

For Outing and Walking Suits and Skirts of All Kinds

"The Linen Store" is headquarters for goods of this kind. Nowhere else are they shown in such wide variety. Many of them are exact reproductions of the popular woolen fabrics of the same name.

Tweed Suitings Duck Sultings Linen Etamine

## It Will Cost You Nothing to examine THE EXPOSITOR'S GREEK TESTAMENT

To Be Complete in Four Volumes, Volumes I, and II, Now Ready,

Each Contains Nearly 1,000 pages. Regular Price, \$7.50 per volume.

TO KNOW IT IS TO USE IT, AND TO USE IT IS TO COMMEND IT. We will send volumes published to any clergyman, or theological student, for examination. If not satisfactory, they may be returned at our expense; if retained, conditions of purchase are within the reach of every one.

WHAT IS THE EXPOSITOR'S GREEK TESTAMENT? The standard work for clergymen to-day as was Dean Alford's book thirty years ago, yet more practical, and superior, prepared by scholars having access to later sources of information and therefore by all commended as a necessity for every clergyman who would have the New Testament in the original Greek with most scholarly notes and explanations.

Rav. Prol. J. S. Riggs, D.D., Anburn Theol. Seminary: "All students will rejoice in its appearance. The exposition is broadly interpretative. Now nod then entirely new interpretations meet us. Help is given where help is needed. The method of the whole is hietorical, and the commen. itself penetrative

Rev. President David Van Horne, D.D., Heidelberg Theol. Seminary: "It gives me great pleasure to commend the Expositor's Greek Testsment, containing the latest Revised Greek Text, with notes and explanatione, as worthy the attention of all Bible

Rev. Prot. Jas. F. Stifler, D.D., Crosier Theol, Seminary: "The notes are more practical than those of Alford. The Eoglish is decidely superior to Alford's. The summarions, from time to time, of the points brought out are of great value to the pracher, It is learned throughout; conservative and compre-hensive."

## Authorities Who Have Used the Work Say:

Rev. Prof. George B. Stevens, Ph.D., D.D., Yale University: "The work is admittedly adapted to serve the purpose which was served years ago by Dean Allord e edition. Its succinct and learned notes present exactly what the sudent oeeds within brief compass. From this work one can get the best results of critical learning within a reasonable tume."

Rev. Prof. Geo. T. Purves, D.D., LL.D., Prince-ton Theol. Seminary: "In the present work much that mada Allord's work uselul has been preserved, while more recent opinions and discussions have been latroduced."

Rev. Marvin D. Vincent, D.D., Union Theol. Seminary: "A useful book for numerous scholarly clergymen. It will put them in possession of the main results of minute critical study and that in a very Iresh and interesting way. The marks of sound scholarship appear upon every page."

#### G. P. Putnam's Sons, New York and London

Knighthood in the Twentieth Century

The golden age of chivalry with its roble ladies and brave knights is remarkable for the noble

ualities of character which it emphasizes. Above the clash of spear and armor and above the curious customs of knighthood rise the highest ideals of courtesy, reverence, compassion, courage, simplicity, generosity, loyalty, truthfulness, self-contrition, and manliness. Who, indeed, has not been manliness. Who, indeed, has not been thrilled by the lives of such valorous knights as the Chevalier Bayard, Alain Chartier, Du Guesciin and others of their type. The quali-ties constituting the bone and sinew of knighthood, if rightly applied, form strong incentives for twenlieth-century chivalry.

The world has outgrown the old methods of character improvement with their dull

moralizing and wearisome platitudes. These lessons from ancient knighthood and these tendencies of the age have been strikingly combined in a dainty and attractive little volume recently written by Louis Albert Banks, D.D., and published by Funk & Wagnalls Company under the title of "Twentieth Century Knighthood." With frequent anecdotes and bright similes he shows how the young man of lo-day may arm himself with the girdle of truth, the breastplate of righteousness, the shield of faith, and the sword of God. Postpaid 75 cts.

#### TOPICS OF THE DAY.

## LIGHT ON THE AMERICAN RECONCENTRADO CAMPS IN THE PHILIPPINES.

THE amazement with which many American papers heard the news that General Bell had established a reconcentration system in Batangas province, Luson, has been relieved somewhat by later reports showing that our method in the Philippines and the Spanish method in Cuba are not identical. The Army and Newy Journal notices some of the protests against the military measures in Batangas, and remarks plyingly that "the things which the civilian critics in the United States don't know about military affairs in the Philippines would make a whole library of war history." The Pittsburg Times says: "General Bell does not propose to starve these people as Weyler did the Cubau reconcentrados. To suppose that he does is an insult on a brave and honorable American soldiers."

Stephen Bonsal, who inspected personally General Weyler's concentration camps in Cuba, and who has just returned from the Philippines, where he was familiar with the American reconcentration system, contrasts the two in an article in the New York Iterath. He says:

"While in the Philippines I thought this policy of concentrations was merely the hippant view of cynical newspaper paragraphers. On my return, however, I find that many believe that the United States Government is enforcing in the Philippines a policy of concentration which is on all fours with the diabolical scheme of extermination by which General Weyler reduced the non-combatant population of Cuba by several bundred thousand.

"It seems curious that such a misconception should arise. The facts about the Weyler scheme form a dark chapter of history which can not be disputed. By him thousands of people were driven into huge corrals, fourteen of which I visited for The Herald during that period when the mortality among the penned-up prisoners was greatest.

"His plan was to pen the non-combatants, men, women, and children, in unsanitary places, not to permit them to bring food into their appointed pen or to allow food to be given them, finally to force them to attempt excape from starvation and disease, and then shoot them down.

"The facts of the so-called system of concentration in the Philippines, or rather in small sections of some of the provinces which came under my observation, differ from this picture as strikingly as day does from night."

As an example, he describes the system put into operation by Major Frederick Smith, now inspector-general of the department of the Southern Philippines, in the island of Marindaque, last summer. To quote.

"During the period of active operations Major Smith saw that every village and every ranch in the island was a commissary store and supply station for the furtive insurgent bands. They did not have to bother about their trains of supplies. They could always find what they wanted, and we never could.

"Of course the inhabitants protested that these supplies were not given willingly, but levied by force, and if the 'Americanos' would only protect them by garrisoning every hamlet and guarding every tanch, it would never occur again.

"Major Smith could not do this, but he hit upon a better plan, not the ordered the concentration of all the inhabitants of the rior into the several seashore towns, which he permanently gar-trioned. Those of the non-combatants who were without meritoned. Those of the non-combatants who were without means and their effects to the appointed station.

"They were made to bring all the food they had, but those who were without provisions were assured of support during the time of their enforced residence on the coast. Having accumulated enough rice and other necessaries to support this non-combatant prisoners for several months, Major Smith divided his little force in three columns.

"One was detailed to guard the concentration camps, and the other two began a relentless pursuit of the insurgent bands shulking in their mountain fastnesses or imple dentils.

"Now, after the goats had been separated from the sheep, there could be no mistake as to which houses and which supplies belonged to the insurgents and which to the non-combatants. All the former were destroyed. Even the little patches of growing crops here and there discovered and the nutritious roots were also dug up.

"In ten weeks the desired result was achieved—all the insurgents threw up the spange and surrendered, and immediately the concentration camps were dissolved. Peace returned and not a hostite shot has been fired on the island since. The plan was a trimpuly of common sense and of tree humanity.

"To compare such a policy as this to that of Weyler is an absurdity. The combatants suffered as they should, only in this exceptional instance it was the Tagal warriors who suffered and not the Americans, and the non-combatants merely suffered some temporary inconvenience.

"The sanitary reports from these camps, signed by both the native and army physicians, show that owing to the sanitary rules which after enforced the health of the prisoners is better and the mortality fifty per cent. less than it is on the average when they are living in their own homes.

"It is just as absurd to call Major Smith the American Weyler as to compare any judge who may send a prisoner to a model jail with Nana Sahib, who put his prisoners in the Black Hole of Calcutta.

"In Batangas, also, it has been decided to inaugurate this policy; also in part in Laguna, and perhaps in Tayabas—in one word, in the whole of Malvar's country, as this section of Luson is called, and not improperly so, as the has a much more effective control over the country and its inhabitants than have our military and civil authorities or both combined.

"This plan was drawn up and the necessary orders were issued by General Bell in the middle of December, and since January 1 concentration has begun and the non-combatants are being brought in to their appointed stations by transportation and under the escort furnished by our military authorities."

Mr. Bonsal takes a discouraging view, however, of the military situation as a whole in the islands. "To my mind," he de-

clares, "the whole archipelago presents itself as a volcano of which Samar and Barangas are the active craters. Should we close them up, it is quite certain that the forces of savagery and slaughter would find vent elsewhere." He goes on to say:

"The time has come when we can no longer fool ourselves. It is many mouths since we were able to fool the world at large about the Philippine we were were far away, but it is compared to the property of the

"No one has a greater admiration than I have for the personal repulations of governor Taft. It is at constructive stateward of the highest order. However, he was sent to the Philippines, not devise a form of government suitable for the islands and the conditions there, but he was directed to form a civil government, and he has doos it, working wooders with unterty near material.

"The flaw in the whole construction is that the civil government edifice is built upon the quicksand of sedition and treason. No matter how eleverly he may build, the whole structure will be overturned some day, and not the day of our choosing. The Filipinos are solidly against American supremacy is any shape or form. If we do not wish to govern them rigidly and by forfor ten or twenty or thirty years, we had better hit upon a scheme to 'seattle,' saving appearances as much as possible.

"How Governor Taft could have spent last November in Manila and yet state that all the provinces are pacified with the exception of Batangas and Samar passes my comprehension. It is only fair to say of Governor Taft that he spent this month in the hospital, and so could not be as well informed of what

## "DANGER AHEAD" IN OUR INDUSTRIAL SYSTEM.

I P the arbitration committee of the National Civic Pederation proves as successful as its triends hope, it may avert a great danger that is said to threaten us. Stuart Uttley, an English workingman who has been visiting this country, says, in an article in the New York tron. After that we sees here indications of a conflict "such as the world has never seen before," He writes.

"The disorganization of labor is a matter of very serious moment to the United States. During the last great engineering strike in England, when over 80,000 men were out for six months. not a shot was fired. There was not a single riot, very little disorder, and when closed it left scarcely may ill feeling. The fact was that being well organized they were under good discipline, and being fairly well provided with the means of subsistence were not driven to the desperation of starving men, hence they were enabled to rely on a passive resistance. One has only to ask what would have been the result in the United States of a prolonged strike in one of the leading industries wherein a great inajority of the men were without any means of subsistence and under no proper control. 'As one who has had a long and varied experience of men and things I should tremble for the result, and to every mind in this direction lies one of the serious daygers to America's future. In Great Britain organized capital and labor are both sufficiently strong to respect each other's opinions and to lend a willing ear to the voice of conciliation, but from what I saw and heard in the States organized capital is the giant, and organized labor the dwarf. It is pretty much the same in industry as in other domains of human enterprise-his-

tory repeats itself. In the early days of British industry, when labor was unorganized, riots and disorder were frequent.

"I hope that I am mistaken, but, judging from what I gathered while in the States from sources well calculated to form correct opinions, I fear that the most momentous danger before America is an individual [industrial?] war such as the world has user seen before.

"The stronger the trusts grow the more powerless will labor become. As it can not obtain redress from Congress in a simular nanner in which British labor can from Parliament, and finding that the few are growing enormously wealthy the hany are steadily sinking into the poverty, it may perchance write out feered, wantonly, and madly like a blind, enraged giant.

"It is not for me to suggest remedies or to indicate the path of prudence. That

would be impertinence on my part. Allow me, however, in closing, to say that nothing so strongly impressed me while in the States as the collective impotence of labor and the growing and crushing might of the trusts. Sooner or later that well-organised body will stand face to face with the horny-hauded, undisciplined, and uncontrolled multitude of workers, and then the real trial of strongth will begin, and after that—the deluge."

#### WHO REAPS THE BENEFIT FROM THE RISE IN PRICES?

THE high prices now prevailing are calling out some questionings as to who gets the benefit of them, Dun's Review, which makes a study of prices, reckons that it costs the average man about \$30 a year more to live now that it did four and a half years ago. Some of our readers who study economy occasionally, from necessity or choice, may be interested to know how little the average man is supposed to get along on, according to this financial authority. On the basis of the prices of July 1, 1897, the man could live a year on \$72.46, altho the editor of the review does not say whether he ever tried to perform this feat himself or not. This year, life is supposed to cost \$101.50. The \$101.50 can be spent in any way the man pleases. but Dun's divides it into seven parts; about \$20 is supposed to go for breadstuffs, \$9.67 for meats, \$15.25 for dairy and garden "truck," \$8.95 for other food, \$15.55 for clothing, \$15.38 for metals, and \$16.70 for "miscellaneous,

Turning to the query as to who is making all the money on this ruinous expense of living, The Review expresses its regret that the figures in regard to high prices have been "quoted in support of efforts to stir up antagonism between wage-earners and employers." and it goes on to say:

"The claim has been made that the remarkable advance in the cost of living since July 1, 1897, was due to combinations of capital, and that the manufacturer secured all the difference in price, while the wage-earners were not earning any more money, altho compelled to pay the advanced quotations for all things consumed. These statements are very far from the truth. Not only are the wage-earners receiving much better pay than at the earlier date, but they are well employed. It was this factor, more than any other, which produced the depression that culminated on July 1, 1807, with prices at the lowest point in the nation's history. The rate of wages is of trifling importance when there is no work. It was estimated by labor experts at the time that three million men were unable to find employment. This means that fifteen million persons were living on as little as possible, and consequently the consumptive demand was reduced to the lowest point. At the present time there is little difficulty in meeting the higher level of quotations, for there is full employment, and each man has only his own family to think of instead of a

host of unfortunate relatives and friends, as was the case during the earlier period.

Moreover, the suggestion that the manufacturers and the canitalists are pocketing all the profits is equally open to contradiction. These are not the men who have advanced the number of deposits in savings-banks to the highest point on record, nor increased the life insurance policies to present phenomenal figures, Examination of the index-number table shows that the farming population receives the greatest share of enhanced prices, the rise in breadstuffs falling little short of op per cent., while means rose nearly 30 per cent., and dairy and garden products 75 per cent. Much of the latter gain is due to the change in season, as eggs, milk, etc., are all more expensive in winter than in midsummer, but this factor enters into the record and can not be ignored. Coming to manufactured products, there is a sudden fall in the percentage of gain, the clothing class rising but 11 per This does not indorse the statement that the manufacturers are securing all the advanced cost of living. In fact, analysis of the clothing quotations in detail makes the showing still less favorable for the manufacturer.

Under the heading of 'The Industries,' published elsewhere in this paper, there appears a table comparing the prices of a few of the principal products of manufacture and the raw material in each case. Here it appears that the advance in the finished article has not by any means been commensurate with the rise in material. For instance, hides are 49.5 per cent, higher than on January 1, 1888, while leather, the partially manufactured product, is 4.3 per cent, higher, but boots and shoes are actually 8.3 per cent. lower in cost to the consumer than at the earler date, Woolens alone, of the articles covered in the table, show a slightly higher percentage than the material, which is due to the peculiar depression recently felt in the wool market. Despite the marvelous demand for iron and steel products and the existence of the most complete industrial combination that ever existed, there appears a rise of but 35 per cent, in that class, while in the miscellaneous division there is a gain of 37 per cent. over July 1, 1807, chiefly due to lumber and building materials. As the laboring man does not as a rule own his home, the greater cost of structural products is not a disturbing element to him. On the other hand, the wage-earner benefits by lower sents and better accommodations, which have followed the increase of money seeking investment and consequent fall in interest rates. Capitalists who formerly received 7 per cent, or more on their properties are now glad to take 4 or 5. These facts can not be considered evidence that the few have reaped all the benefits of the marvelous advance of prices at the expense of the many,"

Says the Scattle Post-Intelligencer :

"Taking the collective figures, they certainly disprove the assertion that the few have reaped all of the benefits of the marvelous advance in prices, at the expense of the many. It hardly requires statistics to prove a matter easily within the knowledge of each individual. Certainly there are few wage-earners who would voluntarily exchange their conditions a present for conditions which they were experiencing in 1897, when the cost of subsistence was 40 per cent, lover than it is to-day."

## HOLLAND'S ATTEMPT TO END THE BOER WAR.

THE disconraging reception of Holland's effort to bring about peace in South Africa arouses considerable feeling among the American newspapers. What they all seem to agree on is

the American newspapers. What they are seen to that the whole would is heart ly sick of the war and wants it ended. Says the Cleveland Plant

"The piece already pand is trightful." The War Office report is that up to the present time the bureful Staff it soft indirect and is cotyment as the of 15-64 already and the other control of 15-64 already and the other case. Of this grim total meanly three-fifths due to discover. Besides these are over \$6,000 wounded staff theme as invalids, prisoners or missing managing the taid casualities \$6,134. Of the invalids see I bound as the staff of the prisoners of the service in sortinal season have dead on those left thu service in sortinal.

mently unfit making the actual reduction of military forces 24,200 offices and men. These are the figures to the end of December, 1901. The linest cost of the war is placed in the neighborhood of \$1,000,000,000.

in the face it is not to be wondered at that the forthcoming announcement of the Chancellor of the Excheoner is awater, by

Victoria World De Manorer Shawer Francisco Williams Of State State

the British taxpayer with apprehension, and that runors of overtures for peace are received with fervent hope of their being well founded. If the communication from the Durch Government should result in the discovery of a feasible way out of the blind alley in which Brition and Boers now find themselves, both sides will no doubt be glad at heart, however much they may affect renumeance to take advantage of it."

#### The Philadelphia Ledger says:

"The recent deliverances of the representatives of the British Government have not shown any purpose to grant independent to the Borrs. It is suggested in the news despatches that one of the objects of the Dutch communication is to draw from the Chamberlain more liberal concessions, short of independence, in Europe have been approached upon the conciliatory Rosebery proposition—that a government like that of Canuda, general annesty, and the résisteation of destroyed farms shall be tendered as a peace offernie—with what respit is unknown.

"In November Mr. John Morley, in addressing his constituents, said thirt mere acquisition of territory in South Africa was not 'empire-fnaking.' He asked the question whether the Government had taken any trouble to slow the Boers in any definite shape, 'and' not in vague phrases,' what the difference between

that which the Boer leaders called independence and British ministers called independence really was. "It might be that an attempt of that kind would suffice to extinguish the Indeons conflagration that is at prosent raging."

"Secretary Chamberlam's statement, made ten days ago in the House of Commons, showed anything but a spirit of concina-

hamsied from South Africa, unless they sorrendered before September 15, 1094, and that the cost of maintaining the families of all barg sers in the field who dail not surrender before that date should be a charge upon their property. The date was reached long sizee. Thousands of lurglers have become liable to the lamentable penalties of the proclamation, perpetual banishment, and confiscation of property. Secretary Chamberlain says

it shall not be withdrawn. Unless it be withdrawn or its penaltives be remitted, the fighting burghers can gain nothing by surrender. The Roseberty peace suggestions provided for a general animesty to the Boers and for the restoration of destroyed property, not its confiscation."

#### Says the New York Times :

"The honor and glovy of the war are necessarily all with the Boers. Several English opponents of the war at the beginning of it warned their countrymen that it was a war 'that could have no triumphs.' As Mr. Morley put it, quoting Swift, ten armed men are an overmatch for one in his shirt. For a great empire to belabor what Lord Salisbury the other day described as a wretched little population ' is not, at best, an operation glorious for the grent empire, however necessary it may be. But that the wretched little population should defeat the great empire in pitched battles and should successfully defy it and stand it off for two years and a half could not have been expected by any intelligent Englishman or by any intelligent Boer. To be fighting for all this time without decisive successes, and with a numerical superiority of twenty to one, and to have your unsuccessful attempts to end the business jeered by your neighbors as the unpotence of a big bully-this is a condition of things calculated to disgust any nation with the war that has brought it about."

## CAUSES OF BUSINESS SUCCESS AND FAILURE.

THE speeches, sermons, and other advice to young men, telling them to avoid speculation and extravagance if they would succeed in business, do not appear to be warranted by the statistics just published in \*Bradtrect's\*, which show that of the failures for last year only a little over two per cent. were due to these causes. The main things needed, it would seem, are good credit, capital, and business ability. There were 1,201,862 conerly be classed as proceeding from, or attributable to, the trader himself, while the remaining three may just as clearly be said to be beyond his control. Of the failures reported in the United States during the past year 7.4 per cent, were reported due to one or more of the first eight mentioned causes; in other words, more tima seven-tenths were due to faults of those failing, while 25,6 per cent, were due to faults of others."

To consider these causes more specifically, the same paper goes on to say:

"Always first among the primary causes of non-success in busi-

## Lack of capital, 3,293. Incompetence, 9,003.

## Specific conditions, 1.755

Inexperience, 8:8.

Competition, 466.

Unwise credits, 376.

Neglect, 300.

Extravagance, to

cerns doing business last year, we are told, and of this number to, 648, or o.88 of one per cent., failed. The number of failures last year was greater than in 1900 or 1899, but "back of that year no percentage of number failing so small can be found earlier than the year 1882." The actual the year 1882."

number of failures is growing, but not so fast as the number of firms; in fact, "failures have increased only one-fourth as rapidly as has the number of people in business."

The one most important thing to have in business, thinks this authority, is good credit. Only 0,0 of one per cent, of those who failed were rated in very good credit, and sisuliar statistics for previous years "would seem to absolutely fix and confirm the statement that in normal years, or in years of prosperity, good credit is the one most important asset, without which all success is vain." Breaktreet's divides the causes of failure into two divisions, those due to the man himself, and those due to others. It says:

"Experience over a period of years has shown that the causes

#### CAUSES OF FAILURES IN THE UNITED STATES IN 1901.

ness is to be found Lack of Capital or its corollary, the effort to do too large a business upon the basis of capital employed. And yet never before has the proportion of failures due to this cause been smaller than in 1901. This statistical showing is in striking contrast with the view often expressed of late that with the development of modern business conditions, and the promulgation of large enterprises, the way of the small dealer has been made harder than in former years. In 1901 Lack of Capital is credited with causing only 30.3 per cent, of the failures, whereas last year 32 per cent, were caused from this reason. The nearest approach of late years to this percentage is found in 1896, when 31 per cent, were so caused. On the other hand, Incompetence, which accounted for 19 per cent.; Inexperience, which caused 7.8 per ceut.; Unwise Credits, which accounted for 3.6 per cent.; Speculation, with 2.3 percent.; and Extravagance, with 3 per cent., were all more fatal than in 1900, or, indeed, in any previous year for at least four years past. Touching these causes, it might reasonably be said that improved reporting may be responsible in some slight degree for the enhancement of the causes in importance, tho the large influx of new people into business may not unnaturally be charged with a large share of the increase in failures due to such causes as Incompeteuce and Inexperience.

"It is a comforting reflection that the failures due to Fraudulent Disposition were only 4.4 per cent. of the whole, the dropfrom 1900 and recently preceding years, when 10 to 11 per cent. of the failures were attributed to this cause, being specifically marked, tho an increased surveillance by those engaged in grant-

of commercial embarrassment may be quite generally classed under the following eleven heads, close study of which is invited in order that the reader may become familiar with their application to the matter in hand;

A .- DUE TO PAULTS OF THOSE PAILING.

- (1) INCOMPREENCE (irrespective of other causes),
  (2) INEXPREENCE (without other incompetence).
- (3) LACK OF CAPITAL.
- (5) SPECULATION (outside regular business).
  (6) Naglect or Business (due to doubtful habits).
- (7) PERSONAL EXTRAVAGANCE.
- (8) FRAUDULENT DISPOSITION OF PROPERTY.
- B .- NOT DUE TO FAULTS OF THOSE FAILING.
- (9) SPECIFIC CONDITIONS (disaster, etc.).
  (10) FAILURE OF OTHERS (of apparently solvent debtors).
- (11) SPECIAL OR UNDUE COMPETITION.
- "Eight of these eleven causes, it will be observed, may prop-

ing of ratings may reasonably be regarded as a contributing factor.

"Among the causes not attributable to the trader himself, Specific Conditions, which cover any happenings out of the normal, were slightly more fatal than in 1900, but still below any preceding year since 1890. To understand the bearing of this specific cause some retrospection as to special happenings in 1901 will not be amiss. Among these happenings the great steel strike, the corn-crop failure, the assassination of the President, and the lowered price of cotton in the South come promisently to mind, and it is a tribute to the strength of the general business situation that a year with such a number of important unfavorable happenings should score so lightly in this respect. Undue Competition seems to have sought many victims, indiging from the percentage shown of 10,0, a proportion not equaled for at least a decade. Specific Conditions and Connectition, in fact, account for practically the entire gain shown in failures due to failts of others than the traders themselves.

"Summed up briefly, therefore, the three great causes of business failure attributable to the trader himself were Lack of Capital, Incompetence, and Inexperience, in the order named, the three accounting for 57.1 per cent. of all failures, as against of per cent. in 1900, while Specific Conditions and Undue Competition, not attributable to the trader himself, accounted for 27.3 per sent. of all the dissaters.

#### PROSPECT OF AID TO CUBA.

CHAIRMAN PAYNE'S denial that the bill for reducing the war taxes was taken up "with any idea of making the reduction of war-revenue taxes a barrier to full consideration of the relief asked by Cuba" is widely inailed as a surrender to public sentiment. The Washington correspondent of the Phitadelphia Press had reported a few days before that seven of the eleven Republican members of the ways and means committee were opposed to giving Cuba relief, and the Washington correspondent of the New York Times reported that the committee stood 12 to 5 against reciproity! Now, however, the papers think Cuba's prospects considerably brighter. The Phitadelphia Ledger's Washington correspondent says:

"The Republican members of the ways and means committee have evidently discovered that their purpose to ignore the recommendation of the President and the popular demand that something shall be done to assist the people of Cuba to set up and maintain a stable government was an egregious blunder. There is little doubt that in agreeing to report a bill to cut oft about \$80,000,000 of annual revenue, using the internal revenue schedules as the sole basis for the reduction, it was expected to stifle the popular demand for any legislation looking to commercial concessions to Cuba, the natural inference being that if the entire list of war taxes should be wiped out, thus cutting off more than three-fourths of the surplus, the customs revenue could not be reduced without threatening a deficit for the ensuing fiscal year. The majority members of the committee have ascertained not only that they have run counter to public sentiment, and placed themselves in sharp antagonism to the President, but that they can not count upon the support of their party in the House for the policy outlined in their recent action in regard to war taxes. Following the announcement of that policy, a wave of popular judignation came rolling in from every section of the country. This caused a halt, and the few men who constitute the leaders and bosses of the House were not slow in getting together, and causing announcements to be made that in reporting a bill to repeal war taxes it was simply intended that the promise made to the country when the taxes were imposed should be fulfilled. There was no intention to neglect Cuba, and that matter would be taken up immediately and given full considera-

Reports from Cuba say that the lack of a market is already affecting the sugar industry there. Two of the largest mills in Matanzas province have stopped grinding, and many more of the most important mills are expected to shut down within the next week or two. The Cuban papers are beginning to compare the condition of the sugar industry under Spanish and under American rule, and La Nacion, in a serious editorial, proposes that the Spanish flag be displayed with the Cuban flag on public occasions, since the capital of Spaniards in Cuba is doing the most for the prosperity of the island. The Spanish flag may have "shielded many errors and great injustice at one time," it says, but "now, like ours, it represents the most sacred moral and material interests of the country, and both should figure closely united in all our public protests against the political and economical absorption with which we are menaced by the American intervention." Mr. H. S. Frye, who for years has been president of the New England Tobacco Growers' Association, has severed "all official relations" with the association on account of its hostility to reciprocity with Cuba. Mr. Frye says, in his letter of resignation, that every dollar he has in the world is tied up in the New England tobacco industry, and he knows that "a reduction of fifty per cent. in the duty on Cuban (Havana) to-bacco would not seriously injure any tobacco interests in the United States." He says further: "I know that every economic reason demands that the United States should control the market of Cuba, and I know the only way to do so is to open our markets to her sugar and tobacco products at a reasonable rate of dnty."

The papers that oppose reciprocity with Cuba continue to express the feeding that, while Cuba should be given help, it should not be done at the expense of the sugar and tobacco industries in this country, but at the expense of all. The New York Press suggests that the Cubans "earry their reciprocity proposals to Europe, whither they now take an ever-increasing proportion of their trade."

#### OPPOSITION TO THE ISTHMIAN CANAL.

WHILE most of the press are discussing which is the better route. Nicaragua or Panama, for the proposed isthmian canal, a few papers manifest a feeling of hostility to the whole scheme. The newspapers of the Gulf and Pacific regions, which will be immediately and vastly prospered by the canal,

IT SEEMS TO FIT UNCLE SAM.

The Philadelphia North American.

deprecate every day's delay in beginning the work. In other regions not so vitally affected, however, the sentiment is not so unanimous. The St. Paul Dispatch, for example, questions why the canal should be built at all. It says:

"One can understand why, from selfish motives, the transcontinental railways oppose the scheme, but apart from their notives is there not, in the experience of the country with rail and water ways, that which justifies them? There is no waterway in the country that is not paralleled by railways.

They not only line the great lakes, but, with their car ferries, cut across them. The Mississippi, from St. Paul to the Gulf, is bordered by railways, and the great river commerce has almost cutriely vanished. De Witt Clinton's great enterprise, the Eric Canal, is no longer even a regulator of the railways that run side by side with it. The Olin Canal, that was to connect the lake and river, was long ago alsamioned, and a railway occupies its bod, while a similar fate has overtaken the Chesapeake and Olino. Twenty old years ago Senator Windom was advocating excessors. The Illinois and Mochigan, connecting the lake with the Illinois River, begin in 1850 and opened in 1848, is now a sewer for Chiengo's fifth.

"On the score of cost, also, the question may be seriously put. The canal will cost, for construction and harbors, over \$800,000,000. What toot of maintenance will be we do not find stated in the commission's report, but it says it will be \$8,390,000 more annually than would be that of the Panama. As the only unitable processes to provide a shorter route for war-vessels, it would be immensely cheaper to build a complete fleet of battlessips and cruisers and maintain them on the Pacific coast than to build this short cut between oceans. The cost of maintaining the canal alone would, annually, pay the cost of a war-ship. It may be useless now to ask these questions, to present these arguments, but we predict they will be asked hereafter."

#### FEELING OF THE GERMAN-AMERICAN PRESS TOWARD PRINCE HENRY.

OF the German-American papers, only those of a Socialistic or Anarchistic bent seem to treat the coming visit of Prince Henry in a hostile spirit. A representative Socialist journal is the New York of Volkszeilung, whose views on the matter are quoted at the end of this article. The other German-American papers have nothing but the warmest hospitality to offer. "German-American who have striven to promote good will between the American and the German nutions, not from interested motives of their own, but from conscientious conviction, have been given a most effective condition." in the conting of the Prince, says the Avea-Vorker Mastr-Zeitung. The Volkshatt und Freihetts Freund (Pittsburg) says the incident should put to confusion all who have been sowing discord between the two countries; and the Westlicke Post (8t. Louis) sees nothing improbable in a visit from Emperor William hum-

- The Philadelphia Inquirer.

self, if his brother is well treated. The Deutsche Correspondent (Baltimore) calls attention to the good effect the news has already had upon the American press, moderating its anti-German tone.

But there is a section of the German-American element which delines to have anything to do with Prince Henry or his visit. Its leading spokesman is the radical New-Yorker Feltzzeitung, which thinks that "the hullaballoo that the newspapers are making over Emperor William's 'great act' in asking the President's daughter to christen his yacht and in sending his brother Henry to represent him in the United States, is tommyrot." The same authority proceeds

"It is the simple truth that the vest majority of the German-Americans who will participate in these demonstrations left Germany because—to put it midly—they dol not prosper there. Except the political refugees, of whom in the last dozen years, scarcely one has trod these shores, they all had to suffer more or less. Some could not, nowithstanding all their industry, make a living. Others fled from the tyranay of compalsory military service, . . , and others again were glad to leave the land in which stands the throne of that royal house to which Henry belongs and whose greatest scion died with the lament that he was tired of ruling slaves."—Translations made for Tux Lyteraev Dieses.

Wives Liable for their Husbands' Dobts.—A decision by the supreme court of Illinois that a wife in that State is liable for the debts of her husband is stirring up some remark in the newspapers. The decision is based on an Illinois statute which says that "the expenses of the family and of the education of the children shall be chargeable upon the property of both husband and wife, or either of them, in favor of the redditors thereof, and in relation thereto they may be sued jointly or separately." The case is sketched and commented upon as follows by the Adlants Journal:

"The court had, of course, to define the meaning of the term family expenses."

"The case that was appealed to the highest court of Illinois was one in which suit had been brought for \$100 balance on a tailor is bill for a \$150 suit of clothes furnished the impecunious husband of a woman of means.

"The court held that the statute 'applies to the expenses of the family without limitation or qualification as to the kind or amount, and without regard to the wealth, habits, or social position of the party; that goods purchased by the husband for his individual use and used by him exclusively constitute a family

"It frequently happens that a man is sued for his wife's debts, and in Georgia he is liable for them unless he has advertised his wife as 'a free-trader.'

"It is a new departure to make the wife responsible for her husband's debts contracted for supplies to be used by him exclusively. Under the Illinois decision a wife may be held responsible for her husband's eigar and liquor bills or any others that he may make.

"Wives in that State who are blessed with money but afflicted with trifling and extravagant husbands will probably begin to adopt the plan of publishing them as 'free-traders.'"

#### LETTERS AND ART.

## HOW FAR DOES A REPUTATION INSURE ACCEPTANCE OF MANUSCRIPTS?

NE commonly hears from the literary beginner the cry : "It is simply because I haven't a name that editors send back my manuscripts": while, with the self-satisfied optimism born of success, his more fortunate rival contends that merit alone decides the acceptance or rejection of proffered manuscripts. Much has been written on both sides of this controversy, the writers being often guided to their conclusions by their own individual experiences. The New York Times Saturday Review, in an editorial article on "The Value of a Literary Reputation," maintains that neither of the noints of view indicated is correct. "The decision of an editor," it says, "is not determined by the reputation of the writer alone, nor by the merit of the manuscript alone : but by a combination of both considerations. In just what relative degrees these considerations influence his conduct depends, in creat part, upon individual character and predilection; but it is nevertheless possible to analyze the general situation with a very fair amount of accuracy." The same paper continues:

"To do this the best way is to put ourselves in imagination in the editorial chair of some great magazine, and then to ask ourselves what rules we would adopt for disposing of the vast number of manuscripts that annually seek admission at the narrow gateway. One thing is certain-but a very, very small percentage of those offered can possibly be accepted, no matter how high the general standard may be. One other fact may be premised-our desire to turn out the best literary journal compatible with commercial success. In the prosecution of this cudeavor we naturally recall to mind the names of those authors who, to judge from our knowledge of them in the past, are most likely to give us what we want; and we forthwith dictate a series of letters to them, expressing the hope that in the future they will give us an opportunity to see their work. Do we write to the unknown and unappreciated author? Of course not, for the simple reason that we should not know his name, even did we desire to write to him.

Having dispatched the letters, the editor very naturally gives precedence to all manuscripts coming from the persons addressed. Its interest in so "multiple and unpromising a person" as the unknown writer can hardly be very keen. Moreover, he is fully alive to the commercial value of a list of prominent names in his advertisements for the coming year. The Times Saturday Review was further:

"lu the mean time, however, a number of 'approved' manuscripts have been passed on from below for our final decision, and attached to some of them are found the names of popular and successful authors, while attached to others are strange, barha un appellations. Is it, now, matter for wonder that we first turn to the former class with the expectation of finding that which we seek, and that by the time the 'unknowns' have been reached our needs have in all probability been partially satisfied, at least? Under such circumstances further contributious are accepted only if so good as to be compelling. Expressed mathematically, the chance of a story from the pen of a well-known anthor being accepted is probably three times as great as the the story were from a writer without reputation. But, on the other hand, the chance of such a story's meriting success is also thrice as great as in the former case. With serial stories the novice's hope of finding a magazine market is reduced still further, owing to the limited number of such stories which can be thus published and to the fact that they are usually contracted for far in advance. Furthermore, every established publication has a certain number of favored natrons to whom much of its reputation in the past is due and to whom it would be unreasonable to expect the editor to prove untrue at our mere bidding."

Considered solely in the light of the above analysis the chauce of an unknown writer would seem to be very poor. But, as is pointed out, there are many modifying circumstances:

"Of these the most important is the large and steadily increas-

ing number of publications, the editor of each of which is keen to surpass his rivals and correspondingly quick to recognize a find.\* The number of celebrated writers is not large enough to go around, and editors, even those of the most conservative publications, are forced to open the foor to many an unknown secker for admission. To prove this it is only necessary to recite the list of the most popular magazine writers of the day, a large proportion of whom were unknown five years ago. Certainly the outlook for a nameless writer is at lenst as favorable as was that of Mark Twain or Bret Harte when they commenced writing. There may be, however, a disnepancy of talent.\*

#### WHAT SHOULD BE THE AIM OF EDUCATION?

PRESIDENT WILLIAM DEWITT HYDE, of Bowdoin College, when recently asked for an answer to the question, "Does a college cilication pays" regime: "To be at long in all lands and all ages; to count mature a familiar acquaintance, and art an initiate friend; to gain a standard for the appreciation of other men's work and the criticism of one's own; to carry the keys of

the world's library in one's pocket, and feel its resources behind one in whatever task he undertakes: to make hosts of friends among the men of one's own ave who are to be leaders in all walks of life; to lose oneself in generous eathusiasms and cooperate with others for common ends; to learn manners from students who are gentlemen, and form character under professors who are

WILLIAM DEWITT HYDE.

Ciristians—those are the returns of a college for the best four years of one's life." It is in the spirit of these words that President Hyde writes on the problems of our educational system in the January issue of The Forum, etting himself to discover the true principles and standards of education. He declares:

"The besetting sin of the higher education is its inevitable tendency to resort to devices which get something out of every-body, instead of putting the best things into the few who are able to receive them. It is infinitely easier to get grammatical and philological results out of every-body, than to impart literary taste and appreciation to anybody. Hence the moustrons perversion of elassical study which has made the literature of those marvelous perplece almost as dead as the languages in which they are written. . . In dealing with large masses of nen' it is so tempting to substitute mechanical destreyin in manipulation for the grasp of the significance of things, in science; granuar scription for illumination, in its origin the extremely continuous for the camination of one of the significance of things, in science; granuar scription for illumination, in its sory; the exticismost other men's opinions for the examination of one's own, in philosophy, that the best teaching is sure to be rare in any institution."

The twentieth century, continues the writer, finds us tired of the German type of scholarship, with its zeal to heap up new acquisitions of knowledge regardless of relative worth, sense of proportion, attractiveness of form, or either esthetic or practical use. "It is just beginning to dawn upon us," he observes, "that a varian of insiration is worth many ounces of information: that an ounce of comprehension is worth many pounds of aggrescience." Furthermore, the degree and the thesis are no longer successful; in so far as it thwarts them, it is a failure. Presi-

ucts of art and civilization through the cultivation of imaginagation; and that a single pound of art is worth many tons of tion and taste. In so far as education promotes these ends, it is

dent Hyde sketches his educational ideal in the following words:

Convrient to Park Publishing Courses. Courters of the Publish

A PROSPECT OF OVER-EDUCATION. Sixty-eight million dollars were given for colleges last year; if the mania for college education continues, we may soon expect the above state of affairs

accepted as sure indications that a man is prepared to teach American youth. On this point President Hyde says:

"Knowledge and technical skill, the disposition to keep step with progress, and the courage to make little excursions on his own account into the unknown, the professor must not, indeed, be without; and if the doctor's degree, or an appropriate hood, serves to mark this capacity, all the better. On these points evidence is easily secured. But then begins the real sifting of the candidates. Was he a leader among his fellows in college: or has he since acquired sufficient appreciative sympathy with undergraduates to know how to lead them now? Is he a man of force sufficient to have given him influence and power as an editor, a lawyer, a banker, or a railroad manager, if he had chosen those walks of life? Is he genial, so that, if he were not a professor, young fellows would be likely to spend occasional evenings with him at the club or in his home? Has he such a character that whoever meets him is stronger and purer for the contact? Has he keenness and inmor so that he can see through men's motives as if they were glass, and not let them pull the wool over his eyes? Has he tact to get what he wants done without arraying against himself that instinct of freedom which is the strongest and the noblest impulse of youth? Does he live in his subject, so that the meaning and worth of it overflow into whatever he says and does? Is the begetting of a kindred enthusiasm for his subject in intelligent pupils the keenest delight of his life? Has he the sense of proportion which enables him to drop all this technical interest when he goes out into the world, and to be a man among men? Has he perfect health, and the cheerful temper which goes with physical vigor? Can be live on his salary without being harassed and degraded by debt? Does he stand well with the authorities in his own department, and will he ever do anything to build up the reputation and influence of the institution he serves?

"These are a few of the many, almost mutually exclusive, qualities the professor must have. Do you wonder that those of us who have to select men for such positions find that out of any fifty well-recommended and apparently well-qualified candidates for a chair there are never more than two or three that merit serious consideration?

According to President Hyde, the aim of education is to fit one for three things: (1) to carn one's living by the exercise of trained powers; (2) to support the institutions of society by intelligent appreciation of their worth; and (3) to enjoy the prod-

"A system which reveals to the kindervarten child the beauty and joy of the world's treasure house before it puts the cold iron keys in his hand : which, when it must train him to acquire and handle these keys, still lets him use them to unlock the myths, legends, and stories of man's great visions and deeds, the marvels and mysteries of rock and soil, plant and animal, sea and star: which is ever on the watch for the bent of each individual mind, and eager to give it free play; which nevertheless, rigidly requires the task freely chosen to be done as the individual's best and to be messured by absolute standards; which secures strong men and highly trained women as teachers, and brings them close to all students, and intimately near to the clasen few who are able to appreciate them; which goes behind the forms of words to the meaning of great works of art, and grasps details in their larger

signification; and which wins to the lifelong service of pure truth, beauty, and goodness the choice youth in each undergraduate class-that system is a magnificent triumph, a triumph the first fruits of which we even now can enjoy, for the sake of which we are all called to labor, and the assurance of which is the best heritage we can hope to hand down to our children."

### THE PROPOSED BRITISH ACADEMY.

FOR several months there have been rumors about the formation of a British Academy, which it was expected would be organized on lines similar to those of the French Academy. The petition for incorporation presented to King Edward at the opening of the new year turns out, however, to be on behalf of a body that is to be called "The British Academy for the Promotion of Historical, Philosophical, and Philological Studies," and that leaves ont of its purview belles-lettres, fiction, and poetry. The new Academy, it is hoped, will do for the moral and political sciences, including history, philosophy, law, politics, economics. archeology, and philology, what the "Royal Society" has achieved for natural science, and the steps which led up to its organization are thus described in the London Times (January 15) :

"At a meeting of the representatives of the chief European and American academies held at Wiesbaden in October, 1800, a scheme was drawn up for the organization of an international association of the principal scientific and literary academies of the world. The scheme provided for the division of the association into two sections, a section of natural science and a section of historico-philosophical science. While the Royal Society represented at the association the United Kingdom in the section of natural science, no existing institution was at that date of sufficiently comprehensive character to represent British learning in the section dealing with historical, philosophical, and philological studies. The defect called forth expressions of profound regret and surprise on the part of the international representatives assembled in Paris in 1900, and the anomalous state of affairs became all the more conspicuous when the International Association decided to hold its second meeting in London in 1904, the direction of the association passing to the Royal Society at the beginning of the present year. Englishmen were thus at length forced to recognize the want of a society representative of the various branches of literary science in this country; and certain representative scholars met, for the first time, at the British Museum on Jane 28 last, and after long and careful deliberation resolved to promote the establishment of a British Academy of Historical, Philosophical, and Philological Studies on conditions which would satisfy the requirements of the International Association of Academies."

The best-known names in the list of the fifty petitioners who will form the first Academicians of the new body are those of Mr. Arthur Balfour, Mr. John Morley, Mr. James Bryce, Mr. W. E. H. Leekly, and Mr. Leulie Stephen. Viscount Dillon, Lord Acton, Lord Reay, Sir Richard Jebb, and several other men of title are also included, and among the scholars represented are Principal A. M. Faibairn, of Mansfield College, Oxford; Dr. Morro, vice-chancellor of the University of Cambridge; Dr. Edward Caird, master of Balliol College, Oxford; Dr. H. F. Pel-ward Caird, master of Balliol College, Oxford; Dr. H. F. Pel-ward Caird, master of Balliol College, Oxford; Dr. H. F. Pel-ward Caird, master of political economy in the University of Cambridge; Canon S. R. Driver, of Oxford; and Cairon William Sanday, of Oxford.

This list, as was to have been expected, has not been received with universal approval. Edmund Gosse writes to the London Daily Chronicle complaining that the historians of literature are practically unrepresented in the new Academy. "Suely this exclusion," he says, "is neither liberal nor intelligible. It would be invidious to cite names in the published list of the British Academy which are little known to the cultivated public. I believe that all these men are deservedly distinguished. But will any one venture to assert that they have all done more for his toric studies than Prof. George Saintsbury, or Mr. Skiney Lee, or Prof. Edward Dowden, or Mr. Prederic Harrison, each of whom has brilliantly illustrated several important branches of the history of literature?" The British Weekly (January 16) 5839:

"There will certainly be outcries on this subject. We have, at all events, quite a number of literary men who think themselves competent to perform the functions of academicians. As it is, we have a good list of names, including nearly all the lir. Heavysterns of the country, and some others. Naturally, there will be much comment on the omissions. Leadie Stephen is included, but Professor Masson is left out. Is Mr. Lang entitled by its History of Scotland and his researches in mythology to a place? He does not find one. Mr. Israel Gollance is included, a place, the work of the line of the control of

The decision of the new Academy to confine itself to history, philosophy, and philology is generally approved. Says *The* Saturday Review (January 18):

"Even Matthew Arnold, with his relentless logic could not convert critical opinion in England to appreciation of the idea of a National Academy; and Matthew Arnold's arguments have been little strengthened by the Karever of the French Academy. I was therefore wise on the part of those who have petitioned the King for a grant of a charter of Incorporation to 'the British Academy, the Studies' to exclude all the subjects over which the French Academy has jurisdiction. They might have gone one step further and found a synonym for the word academy."

### The London Outlook (January 18) says:

"A British academy which took under its wing poetry, beltes, letters, and fiction would not exist for any great length of time, and would probably make itself ridiculous from the beginning. In the departments over which the new Academy hopes to preside the value of results can be gaged with something like reasonable accuracy, masmuch as the subject dealt with does not involve large questions of taste. Further, if, say, one historian or philologist writes a book which adds to our stock of knowledge, his coworkers have the knack of being grateful to him. But which it comes to the writing of decent poetry or fiction the case is at latered. Old poets will not believe that young poets are poets at all, and you can find fifty critics who will praise the worst novel ever produced simply because the author of it happens to whave a record in the sales way. From a constitutional body composed of such persons we shall wish to be preserved.

# DEMOCRACY AND ART.

OMMENTING upon the rapid development of industrial art, J. Karski recalls that some years ago the great painter Franz Lenbach fought tooth and nail against its admission to the art exhibition at the Crystal Palace in Munich, and refused to assent to the purchase of a certain picture for the Glyptothek, exclaiming: "No such clown in smock-frock and apron shall enter here." "What shall such a one say," asks the writer (New Zeil, Stuttgart), "when the artist himself dons the blouse and apron, goes into the shop, and learns the craft of the forge, the carpenter's bench, the loom, of the potter-to produce what? Pictures and statues? No! but cupboards and tables, vases, hangings, carpets, lamps!" Nowadays, we are assured, no exhibition of art is complete which does not include industrial art, and at the last Paris exposition it was this that drew the attention of the masses, and not the galleries of pictures and statuary. The change in point of view, accomplished with the rapidity peculiar to movements of modern life, amounts to a revolution, to a conquest which opens to artistic activity a whole new world.

The poverty as to art of the century just passed, Mr. Karski thinks, lies not in the small amount of work done—it was rich in the production of individual achievements—but in the absolute divorce of art from life. He writes:

"Only pictures and statues counted as works of art, and the ultimate destination of the picture or statue was cither a museum—whither we go to study art, it is true, but rarely to enjoy it—or, worse still, to the private gallery of Smith or Jones of the plettoric purse. . . . Now it is true that art always has been a matter of luxury, but there is this difference between the region of modern capitalism and that of classical nutiquity, or that of the Renaissance. In the first place, in those periods there are an intimate connection between art and public life, and, in the second place, the artistic activity did not then confine itselfs place to the handicrafts as well. Thus there was no yawning chasm between art and life, and to a less degree was art a mere matter of lux-urv."

To Ruskin, and to William Morris and his companions, the writer pays full tribute for their effort to give an esthetic value to objects in common use, and to enable a man to make of his environment, his home, a work of art. To the reproach that these and similar productions are too costly, Mr. Karski answers that their costliness is not at present the essential fact. "The artist who devotes himself to industrial art first of all teaches us the ugliness of the wares offered to us by the dealers. He shows us that the 'renaissance cupboard' or the 'old German sofa' which the modest citizen buys to place in his sitting-room are abjectly, barbarously ugly," This "period furniture" was all very well so long as it corresponded with the "environment." But we too must produce furniture that will suit us, will correspond to our manner of life, our houses, our hygienic demands, Further, by the very fact that he refrains from imitation, the artist teaches us that it is possible to produce objects that will satisfy at the same time our needs and the demands of beauty. The costliness of material is not important, but such use of it that its characteristic beauty shall be made evident. "Mahogany is beautiful, but so is pine; and the problem is to treat pine in the manner best suited to it. The sin against every principle of

good taste . . . is the falsehood of imitating mahogany in pine." Our household furniture is ugly because it is machine-made; but what law requires that machines shall make only ugly things? We have but to furnish them with designs that shall be beautiful and yet not belie the technical process. Our machinery produces ugly objects because we try to make these objects look as tho they were not so made, and they are as false in the matter of beauty as they are in those of durability and usefulness, . . . We say in praise of a given object, "made by hand." Preiudice! Our machines already can accomplish absolutely everything that can be produced by the human hand; but it is not to the interest of the capitalist to introduce such perfect machines. It is the old story, complains Mr. Karski: "We blame our machines for the uscless ugiiness of their products, while we should blame the capitalistic régime which puts the machines to a false use "

But the future is bright, and Mr. Karski concurs with Mr. Van der Emde when he predicts that "the urt which is coming will be more personal than the one which is past, for at no period has the desire of man for self knowledge been so strong; and the place where he can best assert this individuality is in his hone, which each one of us will build after his own will and the desires of his own heart."—Translation made for Tirk Lyterary Digists.

# THE DUTY OF THE CLERGY AS LITERARY

"A NOVELETTE-SOIDBEN woman is hardly a less depressing spectacle than a gin-sodden man," declares Mr. Francis Gribble, an English novelist, "and the matter is one for the moralist no less than for the literary critic." What can be done, he asks, to wean the great mass of readers from books that are not so much vicious as fatuous, and that result only in "mean steals, false views of life, and the stultifying of the intelligence"? The criticisms of the literary journals will not influence this class of readers, for they never read literary journals. The only way to reach them is to send them missionaries whose opinions they are accustomed to respect, and, since a great number of the nov-elette readers are regularly church or chapel goers, Mr. Gribbe thinks that "the obvious missionaries in such a case are the ciergy of all denominations." He continues (in Literature, Isanury 4):

"What I invite them [the clergy] to do is not to insist so much on the 'be good and let who will be clever.' theory. It is an absurd theory; for it is a very poor sort of goodness that is compatible with wilful and avoidable stupidity, and a certain measure of cleverness is necessary in order that potential goodness may become actual. The clergy, of course, know this as well as Ido: but a good many of them have a certain timidity in the practical application of their knowledge. They are afraid of accept as church workers and Sunday-school teachers accres and except as church workers and Sunday-school teachers accres and even hundreds of young women of poor intellectual capacity who get more and more empty-minded as the years roll on because of the rubbish that they read. Can not they reverse this policy?

ne ritions that timey read. Can the truey review this poolty?

"One can not expect them, perhaps, or read'the would be a considered to the property of the pro

"What do you read? Noveletter? The serials in the halfpenny papers? The novels of — and —? I thought so. That accounts for your stupidity. You are committing the size of the man in the parable who hid not statent in the naphirm. You may be a supplied to the parable who had not statent in the naphirm. You may are making yourselves as unit as the drunkard for any decent society. Separately these books that you read may be harnlies. Taken collectively, they do more harm than any single se-called and I refuse to have fatuous people about ne teaching is Sumday-schools or doing any other kind of church work. If you were born stupid, you can not help it, but to keep yourselves stupid by reading inept stories is grossly immoral behavior. It is bad for you, bad for your children, if you have any, and had for every one who comes in contact with you. Go and think this over quietly."

"Such might the chergy speak. The admonition would come, with much more effect from them than from the literary critic for they have infinitely more influence over the people who need it. If they would exert their influence they might really strike a blow at the pernicious nonsense which is now so widely circulated. Can they be induced to do so?"

A Shoemaker's View of "The Portion of Labor,"—Literary critics are sometimes accused of over-severily in reviewing books, but it would be difficult to match the caustic qualities of the following criticism, written by a shoemaker, of Mary E. Wikin's new novel on shoc-factory life. The critique appears in the current issue of The Union Beet and Sher Worker (Booth).

"The Portion of Labor," by Mary E. Wilkins, deals with slocatory life, labor troubles, and love affairs. It is a wonderfully foolish book, of the 'imperceptible movement,' 'indescribable sensation,' 'firm elusiveness' sort. The heroine has 'a New England mind'; sometimes wulks so fast she appears 'to be flying'; 'thens she turned her bead her eyeshals gleamed crimson'; there was about ther 'a mystery not of darkness but of light'; and 'she would have been a great genins had she more than begun to glimpse the breadth and freedom of the outer than togun to glimpse the breadth and freedom of the outer factory workers to start a strike when there was no chance for discounting, and she gailantly leads then back to work again to accept a reduction in wages after they have started all winner.

"The authoress did not know what she was writing about, and yet she must have been paid for her book. That is the most remarkable thing about the book. To think that it was paid for! And printed and published by the most well-known publishing house in the country, and even sold! It is discouraging. The shoe-workers she wrote about had to do their work well in order to be even poorly paid, but this author is fairly well paid for doing work which the most farmant inher-worker could not have ending the short of the short of the short of the short of business as she has of labor. To use one of her favorite adiectives, her conceptions are "fuffit,"

"By and by, perhaps, people will not read such books, and then the world will save the cost of printing, binding, advertising them, etc., which will prove a great economy to the world, and labor may get a portion of the amount saved."

### NOTES

THE death of Anbrey De Vere removes a poet who was writing sonnets long enough ago for Wordsworthto read and praise them. Altho be never attained to general popularity, his work was highly esteemed by literary connoiseurs for its beauty of diction and delicacy of finish.

" s' any author wanta a good advertisement for serious booka," any a The Congregationalist, "let him become President of the United States." President Rooseviet : "Strenous Life" has been printed four times since its author centered the White House, and a French publishing house has just arranged for a translation of his "Cromwell" into French.

Tots Tot's latest novel, "Forty Years," in appearing in the pages of The New Age (London) and of The Commade (New York), a new illustrated Socialist monthly. The story deals with social and religious aspects of peasant life, and is based upon a "Legend of Little Russia" popularised by Nicolas Kostamoroff, the Russian historian.

AN instructor in English literature in Totta Coltege recently, tested the knowledge of the savrage undergraduate in regard to standard English antions, by submitting to his students a list of four groups of questions as the author of "Paradise Losts." The Pickwick Papers. "The Biglow Papers." Adam Bode. "Idylis of the King." Alson Ben Adhem? In wast book does such of the following characters occur; Morfectal, Ingo. worth, Carlyie, Ruskin, Matthew Arnold, Browning. The examinees were worth, Carlyie, Ruskin, Matthew Arnold, Browning. The examinees were storen men and eleven women-three seniors, buttered paniors, nie acphonicus, which is a submitted of the store of the submitted by the submitted of the submitted by the submitted b

# SCIENCE AND INVENTION.

# THE FAULTS OF SCIENTIFIC LANGUAGE.

THE talk of the scientific man is not only unintelligible to the layman, but its technicality is also objectionable from the standpoint of science itself, so we are told by T. A. Rickard in a letter published in Science (January 24). After deploring "that inexact thinking should be evidenced by vagueness of expression," which "is often weiled by the liberal use of sonorous Greek-Latin words," he goes on to say.

"Barrie has remarked that in this age the man of science appears to be the only one who has anything to say-and the only one who does not know how to say it. It is far otherwise in polities, an occupation which numbers among its followers a great many persons who have the ability for speaking far beyond anything worth the saying that they have to say. Nor is it so in the arts, the high priests of which, according to fluxley, have 'the power of expression so cultivated that their sensual caterwauling may be almost mistaken for the music of the spheres.' In science there is a language as of coded telegrams, by the use of which a limited amount of information is conveyed through the medium of six-syllabled words. Even when not thus overburdened with technical terms it is too often the case that scientific conceptious are conveyed in a raw and unpalatable form, mere indigestible chunks of knowledge, as it were, which are apt to provoke mental dyspepsia. Why, I ask, should the standard English prose of the day be a chastened art and the writing of science, in a great scientific era, merely an unkempt dressing of scientific ideas? The luminous expositions of Huxley, the occasional irradiating imagery of Tyndall, the munly speech of Le Conte, and of a very few others, all serve simply to emphasize the fact that the literature of scientific research as a whole is characterized by a flat and ungainly style, which renders it distasteful to all but those who have a great hunger for learning."

As an example of the vagueness of expression that he condemns, the writer instances a case in which the origin of a perplexing ore deposit was recently imputed to the effects produced by the 'dynamic power' which had shattered a certain mountain. He saws:

"Dynamic' is of Greek derivation and means powerful, therefore a 'powerful power' had done this thing is but in physics the word is used in the sense of active, as opposed to 'static' or staticary, and it implies motion resulting from the application of force. In the case quoted, and in many similar instances, the word 'agency' or 'activity' would serve to interpret the hay idea of the writer, and there is every reason to infer, from the context, that he substituted the term 'dynamic power' merely as a frippery of speech. It is much easier to talk grandification of the state of the writer of the substituted in the term the sale with the context, that one was the substituted in the term that is to make a careful study of a region, trace its structural lines, and decipher the relations of a complicated series of faults."

Again, big words are often used simply because they are big. For instance, a mining expert recently described a famous tode as traversing "on the one hand a feldspathic tufaceous rock" and "on the other hand a meatmorphic matrix of a somewhat argillo-arenaceous composition." This, says the writer, is "scientific nousene," the description meaning literally a "change matter of a somewhat clayey-sandy composition, which, in Anglo-Saxon, is mu-qit." The writer goes not sox;

"Among tertain scientific met there is a feeling that scientific should address themselves only to tellow scientifics, and that to be considered the supportion the unlearned is to lose casts among the top the supportion of the target states among the carried. It is the survival of the instrow spirit of the dark ages, before modern science was born. . . . In its very infancy geology was nearly choked with big words, for Lyell, the father of modern geology, said, seventy years ago, that the study of it was 'very easy, when put into plainer language than scientific writers choose often unnecessarily to employ. 'At this day even the publications of the Geological Surveys of the United States and the Australian colonies, for example, are occasionally restricted in seedsflowes by error in this respect.

"From a wide experience among those engaged in mining I can testify that a large part of the literature thus prepared is useless to them, and that no one regrets It more deeply than they, because there is a narkest tendency among this class of works to appreciate the assistance which science can give. Take, for example, a sentence like the fullowing, extracted from one of the recent reports of the United States Geological Survey; 'The ore forms a series of imbricating lenses, or a stringer lead, in the slates, the quartz conforming as a rule to the carunculated schisticose structures, tho occasionally breaking across lamine, and sometimes the slate is so broken as to form a reticulated deposit." This was written by one of our foremost geologists, and, the translated, the sentence is found to convey a meful fact, but is it likely to be clear to any one but a traveling dictionary?"

In conclusion, the writer points out that speech is a faculty that appears to divide man from all other living things, while at the same time the imperfection of it weighs him down continually. He says:

"To be able to express oneself perfectly would be divine, to be unable to make oneself understood is human. In 'Man's len in Nature, 'Huxley points out that the endowment of intelligible speech separates man from the brutes which are most like in namely, the anthropoid apes, whom he otherwise resembles closely in substance and in structure, . . Considered from the standpoint, language is a factor in the evolution of the race and an instrument which works for ethical progress."

Under these circumstances, it will be seen that scientific mennat least those who use such language as is here reprobated are wilfully retarding the evolution of the race and may be regarded as little better than degenerates. Hence scientific writers had better read over their pieces and slash vigorously at the Latin and Greek words until the residuum may be planly "understanded of the people."

# AMERICAN SCIENCE AND THE CARNEGIE INSTITUTION.

THE reproach against American science, that so little is being done to foster advanced research, seems likely to be removed, in part at least, by such institutions as those founded by Mr. Rockefeller in New York and Mr. Carnegie in Washington. Altho the details of the manner in which Mr. Carnegie's gift will be used have not been made public, and altho its objects include the promotion of literature and art as well as of science, there is little doubt that science will benefit largely by the opportunities that it will offer. An editorial writer in The Electrical Review has the following to say on the subject:

"It is a curious fact that, while in this country we have gone further in engineering, which means the application of science to practise, than any other people, yet in the last two or three decades we have fallen behind other nations in the advance of pure science. If we look to see who are the leaders of thought in various departments of scientific activity, we find that nearly all of them are European. This is true not only in medicine, biology, and chemistry, but, singularly enough, also in electrical physics and in practically every science except astronomy. Electrochemistry, the newest development of electrical application, is practically due to Van't Hoff, a Dutchman, Arrhenius, a Swede, and Raoult, a Frenchman. Electrical physics began with Faraday, was nurtured by Maxwell and Kelvin, and seems to be advancing with tremendous strides through the labors of J. J. Thomson, all of them Englishmen. From Bunsen to Berthelot the science of chemistry seems to have made its home in France and in Germany.

"The reasons are not far to see: In England the Royal Institution has fostered the labors of such men as Faraday, Thomson, and Dewar. In France the Collège de France has given opportunity for research of all kinds, while both Government and citizens united in establishing the Pasteur Institute, which may be looked upon as the source of advancement in the recent science of biology. In Germany the conditions surrounding university life are such that professors have both abundant leisure

and almost limitless opportunity to pursue purely scientific research

"In this country things have been different. Our university professors have been compelled to teach, and up to the time of Mr. Carnegie's most wise and far-seeing foundation there has been no analogy to the institutions mentioned above. Very few men have enjoyed the combination of leisure and opportunity necessary to the prosecution of scientific research. We are a busy people, and our national spirit has been evident even in our universities. Mr. Carnegie has given the opportunity; nobody will believe that we can not produce men to avail themselves of it with credit and worthiness.

# MOVING PICTURES FOR THE BLIND.

7 HEN one sense is absent or impaired, there is often a quickening of one or more of the others to make up for Thus in the blind, the senses of touch and hearing are often unusually acute. This bas been utilized by a Frenchman in the

CINEMATOGRAPH FOR THE BLIND.

construction of a device resembling the toy called the "zoetrope," that was the precursor of the cinematograph, the vitascope, and other machines for exhibiting pictures having the illusion of motion. Only in this case the pictures are replaced by images in relief, and they are apprehended not by the eye, but by the touch. This device is described as follows by M. C. Marsillon in Cosmos (Paris, January 11). He says:

"The idea of a cinematograph for the blind would seem, in the strict acceptation of the term, to be a cruel irony. . . . Nevertheless, such a device exists. It is the invention of a young physicist, M. F. Dussand, a combination of electrician and philanthropist, to whom we already owe an ingenious microphonograph: and it is of wonderful simplicity, altho destined to fur-

nish much amusement to those unfortunately deprived of sight. "The inventor thought that it would be possible to give to the blind the notion of the motion and displacement of objects by using a cinematograph in which images in relief should take the place of photographs. These reliefs, passing more or less swiftly under their fingers, would enable them to follow with interest. and at the same time with profit for their intellectual development, the flight of a hird, the wave breaking on the shore, the motion of the stars in the sky, the tossing of a bough in the breeze, the galloping of the horse, etc.

Thanks to this device, a general method for the education of the sense of touch in the blind has been invented. Besides this, the instrument that we are about to describe has enabled us to make a comparative scientific study of the senses of touch and sight from the point of view of the time necessary for perception. and of the persistence of the impression.

"The cinematograph for the blind is composed of a circular metallic plate with a horizontal axis on which is mounted a toothed wheel. This plate may be rotated by means of a pedal. Two very thin circular sheets of tin, of diameter slightly larger than that of the plate, bear on their edges, in relief, representations of a moving object in the different phases of its motion. The two sheets are applied to each other in such manner that the reliefs exactly correspond, the hollow sides facing each other, so that the sensation of the actual object is given to the touch.

"The tin circles have holes at the center so that they can be slid on the axis of the central plate. They are held in place by

a metal piece, and a second metallic disk is put on the other side. The whole

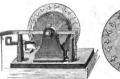

is then fastened by a screw. "The reliefs on the two tin sheets project beyond the two disks. They pass in succession between two small apertures on which the blind person presses the index fingers of botb hands.

"The rapid succession of the same object in different positions of motion gives the hlind person the illusion that he has a moving object under his fingers.

We should add that the inventor intends to give to every one the full and entire liberty of constructing this ingenious instrument on his own account. He simply wishes to see the application to an increasingly larger number of cases, of a method that rests on observation of the way in which one sense can take the place of another that is totally destroyed, and on the possibility of its development by exercise when vestiges of it remain."

We are not told by M. Marsillon whether the illusion produced by this relief-zoetrope is vivid, but one essential difference between it and the ordinary one that operates by vision is noticeable. In the latter an illusion would not be produced by a simple succession of pictures in different phases of motion, passing before an aperture. It is necessary that the eye should see each momentarily as it is in front of the opening, and not as it enters or leaves the field of vision. This is effected in the ordinary goetrope or "magic wheel" by causing the observer to look through slits in a moving screen. The same effect is produced in the magic-lantern cinematograph by throwing a quick succession of pictures on the illuminated screen. If these were seen moving from one side to the other, the illusion would be destroyed. As we have seen, there is no device of this kind in the

REAR VIEW, SHOWING MECHANISM.

ONE OF THE TIN PLATES,

arrangement just described, and if an illusion is produced its conditions must be different in the case of the two senses-touch and sight .- Translation made for THE LITERARY DIGEST.

Becquerel Rays and Bacteria.-The radiation resembling the Roeutgen rays in its properties, which is continuously emitted from certain substances, has already been noticed several times in these columns. Its discoverer, M. Henri Becquerel, has already found that it is so injurious to the human skin that those substances that emit it powerfully must be enclosed in a leaden tube if they are to be carried about the person. Now it appears that it is also fatal to bacteria. Says the Revue Scientifique (January 11) :

"The bactericidal properties of sunlight have been known since they were demonstrated by Downes and Blunt in 1877. It is also well known that these properties are not shared equally by all parts of the spectrum, but that they belong specially to the blue, violet, and ultra-violet rays. The researches of Becquerel and Curie have shown that the radiations emitted by a radium apparatus (Becquerel rays) do not form a homogeneous whole, but that they are divided into two groups-those that pass easily through different media and those that can do so only with difficulty. The solar radiations and the Becquerel rays have thus a cerrtain degree of similarity from the physical point of view. It therefore becomes allowable to ask whether the two groups of Becquerel rays, like the two solar groups, are also differentiated by their bactericidal properties. This question has been answered by E. Aschklnass and W. Caspari. The experiments of these investigators, which are described in the November number of the Annalen der Physik, show that the Becouciel rays have very pronounced bactericidal properties, and that these properties belong to the second group of radiations, that is to say, to those that are easily absorbed by the media that they traverse. The rays therefore resemble those of the sun not only in their physical properties but also in their action on microorganisms."- Translation made for THE LITERARY DIGEST.

### MORTALITY FROM MOUNTAIN CLIMBING.

In the vital statistics of mountainous countries death by accident in climbing plays a considerable part. That people are permitted to risk their lives in the pursuit of mere excitement is regarded by many authorities as unwise, but undoubtedly the

CLIMBING THE PEAK OF MAITERHORN.

mountain-climbers would regard any restriction as undue restraint of their personal liberty. The following notice of mortality among climbers in Switzerland is from Cosmos (January 11):

"The montains put a subden end to a greater number of lives every year than is generally supposed. Many of these catastrophes are unknown beyond the localities where they occur, and the fame of them does not go further than the valley where the rash touriest have bruken their Douse, parjug dear for the holdness that has impelled them along abrupt slopes, slippery edges, and tey peaks.

"Nevertheless, these deaths, unknown to the general public,

are registered, classified, and reported by the local authorities.

"From an official report that has just been published, it appears that in rojo, in switzerland alone, accidents on monations amounted to 119, and that death occurred in all of these. This figure is double that of 1900 and represents the highest total that has hitherto been recorded. The majority of these accidents took place in the neighborhood of Chamounts.

"A glance at the accompanying illustration, which is taken from The Scientific Innerican, will show why Alpine climbing presents so frequent chances of death. We may even perhaps conclude that climbers are fortunate not to break bones any oftener than they do, in indulging in such violent rymnasties.

"This picture represents one of the most difficult stages of the assirant of the Matterbort—the fascinating peak, whose summits so difficult to gain. The first attempts to scale it were in 1858, and others followed in 1859, 1860, 1861, and 1865, the two last under the direction of the English climber Edward Whymper.

"The ascent of 1865, was justicularly disastrous; the party numbered eight, the guides Croza and Pierre Tangwader, their two sous, Lord Francis Douglas, M. Hadow, the Rev. Charles, Hudson, and Edward Whymper. Only four returned; Hudson, Hadow, Croz, and Douglas were precipitated into the abyas by the runture of the root that oblined them to their companions.

"The Matterloror has pincedly lost 30 human lives. The most recent ascent was attempted in July, 1001, by five excursionists, including two Judies and two guides. One of the women fell 30 meters [95 feet], carrying with her a guide and the other woman, Strangely enough she was not killed and neither was the guide, but the latter lost his reason."—Translation made for Tux LITERAN THORST.

# LIGHTING BY DISSOLVED ACETYLENE.

A NEW method of storing acetylene gas for lighting purposes has just been introduced in Prance. According to a communication by M. E. Pouché, published in the Revue Generale des Sciences, this method is absolutely free from danger of explosion and is likely to be generally useful, especially where portability is desired. The gas, instead of being stored in its gaseous state or compressed to a liquid, is dissolved in the liquid hydrocarbon known as accessors. Says M. Pouché:

"Since 1866, Messrix Claude and Hess have had the idea of employing the solubility of acetylene in some liquid to obtain an accumulation of the gas in portable receivers at much less pressure than liquefaction necessitates. They thus hoped to diminist the daugers due to the liquefied gas whose pressure at 37° C. [69] F. J. is 68 atmospheres. To this end all known liquids were experimented with, and the coefficient of solubility was determined for each. Among them actions attracted the attention of the inventors particularly and seemed to them best fitted to the use in view, because its boiling-point (143° F.) is not too low and it is already prepared on a commercial scale.

A company for placing the matter on a commercial basis was formed. It has been found that the acetone must be practically pure, as dilution with water diminishes its dissolving power, The pressure must be kept below to kilograms (22 pounds) if the free liquid is used, for above this there is danger of decomposition and consequent explosion. To completely obviate danger of combustion in railway collisions, etc., the receptacles are filled with a fine porous material, and it is found then that the pressure may be raised to as kilograms (77 pounds) without danger of explosion. The receptacles in use are in three sizes, holding respectively 2 liters, 12 liters, and 100 liters (one-half gallon, 3 gallons, and 25 gallons). The amount of gas that can be held is one hundred times the volume of the receiver for the normal pressure of 22 pounds. The gas escapes at a variable pressure, so that a device is necessary for making it uniform. It is expected that the system of lighting by dissolved acetylene will be used to great advantage in railway cars, automobiles, ontdoor entertainments, and also in country houses, shops, warehouses, etc. The

gas may be used with the Welsbach mantle, with which it gives very satisfactory results .- Translation made for THE LITERARY DIGEST.

# AN ELECTRICIAN ON THE DANGERS OF ELECTRIC TRACTION.

THAT electric traction should present its own special problems, involving the avoidance of its own particular dangers, is of course natural; but that an eminent inventor of electrical devices should feel moved to warn the public against these dangers at a time when we are looking to electric traction as a means of safety in travel, is certainly worthy of note. Hence no little sensation has been caused by a letter from George Westinghouse to the New York Times warning the public that the substitution of electricity for steam as a means of propulsion in the Park Avenue tunnel might not achieve the results that most people would expect. His points are thus summarized in The Electrical Review (January 25) :

"To sum up Mr. Westinghouse's views, the possibility of higher speeds from electric traction, while not extending the vision of the engineer in charge of the apparatus, will necessitate a greater distance within which to stop trains. Again, the distribution of a great weight of apparatus beneath one or more cars of a train, more or less loosely supported, with a small clearance above the rails and road-bed, requires a greater degree of precaution than is the case with present steam cars. Further, a short-circuit is sufficient instantly to set fire to wooden cars, and when a total wreck results from accidents, which are inevitable with any mode of traction, the debris scattered about over live and running rails would invite further and serious accidents. On account of these considerations, and especially when the system under consideration is installed in a tunnel, Mr. Westinghouse has uttered a note of warning."

The editorial comment of The Electrical Review on this is as

"It would be an unworthy member of the engineering profession who would attempt to stand in the way of the introduction of the most scientific, serviceable, and reliable safety appliances for any purpose. The dangers to which Mr. Westinghouse calls attention certainly exist, altho it is doubtful whether they exist in such marked degree as to render precaution against them more important than that against certain other dangers which surround every variety of transportation, whether by land or sea. The inflammability of cars is a subject upon which much has been said and written. In the not remote past there have been dreadful accidents upon steam-operated railways in which cars were set afire by lamps or stoves or by the locomotives themselves. Several years ago the legislature of the State of New York, and subsequently those of other States, passed laws requiring the suppression of the car stove and of the car lamp in the interests of public safety. Perhaps if manufacturing had been advanced to its present point they might have gone a step further and suppressed the wooden car. No one can fail to agree with Mr. Westinghouse that fireproof cars are very desirable and that electric-traction systems should be surrounded by every apparatus of safety.

"It is to be hoped, however, that this warning, emanating as it does from so distinguished an engineer, and one so identified with the progress of electrical engineering in this country as to rank among the first in the list of productive agencies in the electrical field, should not be misinterpreted into any attack upon electric-traction systems. This, indeed, he has explicitly denied. Coming at this time his communication may seem to give to those opposed to the extension of electric railway traction a valid argument against such a system. The contrary is true, because, from the very nature of the suggestions made by Mr. Westinghouse, the remedy for all of the dangers mentioned in his remarks is clearly shown,"

Criticism of his attitude has brought out from Mr. Westinghouse a second letter, defining his attitude more precisely. This also appears in The Times and is dated January 18. Says the

"No one can have a stronger belief than I entertain of the ad-

vantages to be derived from the use of electricity in the operation of trains. A lifelong experience, however, in connection with safety appliances upon railways has caused me to view the subject from quite a different standpoint from that usually taken, especially by inventors and promoters, and in some cases by manufacturers of electrical apparatus, who evidently dislike to emphasize the dangers attending the application of so much electrical machinery beneath the ordinary combustible cars now generally in use, and the utilization of which has been contemplated in order to keep down the total cost of installation. .

"The public announcement of Mr. Verkes, who has had so many years of experience in matters of this kind, and proposes to construct his cars for the underground railways in London of non-combustible material, is a corroboration of the views I sought to bring to the attention of the public through your columns,

"I am not disturbed by personal criticisms based upon a misapprehension of my motives, which are entirely in the interest of the public and not in the slightest degree governed by my personal interests. It may be to my credit to render a public ser-

### SCIENCE BREVITIES.

"EGYPT, which in all probability is the oldest mining country in the world, may take its place again as a producer of gold after so intermission of many centuries," says The Engineering and Mining Journal. esplorations to the desert section along the borders of the Red Sea have shown the existence of very ancient workings, and also the probability that some of these may be reopeoed with profit. Several English companies have been organized to exploit these mines, and their value will be thoroughly tested."

"THE immeuse improvement of the health of the Cuban community since it has been under American control is a testimony to the advantage ac-cruing from modern sanitary knowledge and methods," says The British Medical Journal. "The island has been one of hygienic ill-fame for centuries, but vigorous methods have not only minimized the effects of yellow fever, but have greatly reduced the prevalence of malaria and the m ity generally. Such striking results will encourage those who have commenced a crusade against disease in the tropics."

ANDREW CARNEGER, in a recent talk to the New York Rallroad Y. M. C. A., predicted great increase in railway speeds to be attained by the aboli-tion of curves. He said, as reported in The Railway and Engineering Rewie, Jaunary 25: "Your sons who are to succeed you on the New York Central will run trains at a hundred miles an hour, double your present speed, just as you are running trains at double the speed of thirty years ago. The line will be straight. In the language of Scripture, the crooked laces,' that is the curves, 'will be made straight.' . Nothing bot a straight line will begup-to-date in 1950, or before that."

THE following suggestion comes from "Father Tabb," of St Charles College, Etlicott, Md. :

Editor of THE LITERARY DIGEST - As it is the interval in language and music that determines the sense, may it not likewise mean more in pathology that has yet been conceived? Something of this physicians observe in fevers and spasms; but has any one yet studied the intervals of fain? The slightest variations of temperature are noted, and may it not be that as much lies between as is found in the indicating symptoms themseives? Yours very truly, JOHN B. TABS.

A SWIDISH inventor named bjostrand has constructed an ingenious safely appliance for vessels, which he calls a "water kite." As described in the Annalen der Hydrographie, it consists "of an aluminium plate suspended by a wire and so balacced by weights that the motion of the vesset causes it to maintain a fixed depth so long as the speed remains constant. It acts, in short, like a kite except that it swims downward instead of flying Its depth remains substantially the same for speeds of from five to fifteen knots. When the kite strikes an obstacle, it is detached from the wire, the change in the tension of which causes an alarm-bell to ring. The kite, however, remains attached to a second wire by which it can be recovered."- Translation made for THE LITERARY DIGEST,

In discussing Marconl's feats, The Electrical World and Engineer calls attention (Jaouary 18) to his personal qualities as a factor in his success and especially in the confidence felt by so many electrical experts in the reality of his results in transatlantic signaling. It says: "It will be recalled that in the five years or more in which his name has been prominently before the world, Signor Marcoul has at no time snooonced what he expected to accomplish, in every case the public having obtained knowledge of his place only after they had been carried to successful completion, is largely due the confidence he has inspired and which caused his number ported statement as to the reception of the famous signal at St. Johns to be accepted without question by all who knew of the man. At the dinner Prof. Elihu Thomson said that wheo asked by a oewspaper reporter if he placed confidence in Marconi's state-cost, he reptied, 'If Marconi said he did it, I believe he did "- which is the same reply made to a newspaper reporter by Edison; and Dr. Pupin, In his remarks at the dinner, said that he woold not now believe that the signals had been received if he did not know Mr. Marconi personally. Surely this is a case of a virtue meeting with merited reward."

# THE RELIGIOUS WORLD.

# HOW SHALL WE THINK OF THE DEAD?

I N reply to a correspondent who writes to him asking for words of assurance regarding a future life, and for a more definite knowledge of how we should think of the dead, Dr. Lyman Abbott essays to throw some new light on the problem of immortality. He prefaces his statement by saying that he finds it impossible to think of the dead without thinking of the living, for his thought of the dead is based upon his thought of the living. He continues for The Outlines, January 4):

"It is the postulate of all my thinking that there are two worlds-an outer and an inner, a material and a spiritual, a world governed by inflexible law and a world of self-governed liberty, a world discerned by eye and ear and touch, and a world discerned by consciousness. If the philosopher assures me that these two are one, I do not dispute him; perhaps they are; nay, probably they are; but in all my thinking I think of them as two worlds, cooperative but contrasted. I think of the spiritual world as ever manifesting itself through the material world-a perpetual but invisible Presence, veiled yet revealed in all phenomena: a love of beauty in all forms of beauty, an intellectual skill in all mechanical contrivances, a true spiritual consciousness in all seemingly unconscious operations of nature, an everpresent and eternal Energy from whom all things proceed-au Energy whose thought is in all Nature's ingenuities, whose purpose is in all life-processes. I conceive of Him, the ever-conscious Artist in every flower, the ever-conscious Artisan in all correlated forces, the All-Father is all history and in all lives. I conceive Him setting me off from Himself, as a spark is struck by the hammer from the red-hot iron, to be, like Him, a lover of beauty and a creator of beauty, a lover of truth and an utterer of truth, a lover of righteousness and a doer of righteousness; and yet, like Him, free to choose the ugly, the false, the unrighteous; and because thus free, fitted to be His companion; able to be at one with Him or to separate myself from Him, able to think His thoughts, share His purpose, be partaker of His life, or to be indifferent or averse to Him; capable of being His companion and His friend, and therefore capable of being His enemy.

The part that the material world and the physical organs play in the development of the individual life, says Dr. Abbott, may be divided into three stages. In the first stage the material organs minister to the life of the spirit. In the second stage, such growth of the spirit as can be attained on the material plane is substantially achieved. In the third stage, the physical organs begin to appear as a clog upon the spirit, and man becomes keeply aware of limitation. Dr. Abbott declares:

"The artist is conscious of a beauty which he can not interpret through the brush; the poet of truths which he can not frame into verse, the orator of a life which transcends all his powers of expression. While all others are praising his creations he is growing increasingly dissatisfied with them. His life has grown at once too large and too delicate to be expressed by the tools with which he is furnished. He longs at times for a subtler brush with which to depict beauty, a liner language than words afford to express his inexpressible life. Moreover, as he begins to feel the need of finer tools they begin to grow poorer. His eye begins to lose the keenness of its vision; his hand the definess of its touch; his sluggish brain refuses to obey his call, and the words which used to come in flocks at his bidding come slowly and singly or not at all. Sometimes the spirit remains in its prison long after it has ceased to be a palace beautiful, as if to show us how dreadful this world would be were we all to live our life here after the material organs had ceased to be a help and had become a hindrance. But generally before this time comes the prison walls fall away, and the emancipated spirit enters upon a new tho unseen habitation fitted for its larger development; the dulled tools that are losing their value are taken away and the worker is given a new equipment in the new world for the richer, finer life to which, after this brief earthly schooling, he is called.

Thus, the body, its purposes all served, returns to the earth

from which it came, "dust to dust, ashes to ashes"; and the spirit, set free, enters upon the career for which it has been unconsciously preparing. Dr. Abbott concludes.

"I think that there are no dead : I think that there is no death : I think that there is no long and dreary sleep, no waiting for a future resurrection of a body which has served its purpose and has no future purpose which it can serve; that life goes on unbroken by what we call death: that the resurrection of lesus Christ was not an extraordinary event, but only an extraordinary evidence of an ordinary event; that he was the first fruits of them that sleep; that all rise from the dead as he rose from the dead, and live as he lives : that to die is 'to depart and to be with Christ, which is far better'; that every death is a resurrection, and that to every spirit God giveth a body as it pleaseth him. I think of death as a glad awakening from this troubled sleep which we call life; as an emancipation from a world which, beautiful the it be, is still a land of captivity; as a graduation from this primary department into some higher rank in the hierarchy of learning. I think of the dead as possessing a more splendid equipment for a larger life of diviner service than was possible to them on earth -a life in which I shall in due time join them if I am counted worthy of their fellowship in the life eter-

# THOMAS JEFFERSON'S BIBLE.

WHATEVER may be his views of inspiration, every man who frequently consults the Scriptures has a Bible that is, in a sense, his own—one that represents, in its dog-ears, thumb-marks, and annotations, the spiritual personality of the uner. Jonathan Edwards's Bible was the Bible of a theologian; Dwight La, Mosdy's of an evangelest; and Thomas Jefferson's (for the reputed "initial" was a closer student of the Scriptures than those old New-England ladies who lowered their Bibles into the wells when they heard of his election to the Presidency, was that of a foreruner of the "higher critics" of the present day. A bill labs been recently introduced into the lower house of Congress to authorize the printing of 9,000 copies of this "Bible" of Thomas Jefferson.

In his recent biography, "The True Thomas Jefferson," by Wilham Eleroy Curtis, the following description is given:

"One of the most interesting objects in the Smithsonian Institution at Washington is known as 'Mr. Jefferson's Bible,' ing his retirement at Monticello, after his return from the White House, he spent several months in the preparation of an arrangement of the New Testament which he intended to publish and to have translated into various Indian languages as a basis of a true religion. It is a little leather-bound volume, evidently intended for an account book. With great peatness and care he pasted upon its pages four versions of the New Testament-Latin. Greek, French, and English-in parallel columns. The volume is made with the scissors and paste-pot, and a few interlineations and notes in Jefferson's minute handwriting. He took a copy of the New Testament and cut from it and threw away as worthless every verse and paragraph that to his mind was ambiguous or controversial, every statement of fact that would not have been admitted as evidence in the court of justice and all duplications in the narrative of the life of Christ. The remainder of the Gospels and the epistles are these, arranged in their proper chronological order: a passage from St. Luke being sandwiched between one from St. Matthew and one from St. John. His idea was to present the best account of every incident and fact in the lives of Christ and his apostles, with all their teachings that were undisputed and that required uo interpretation.

"On the margins are explanatory notes and references. The index refers to the proper place of each passage in the ordinary. Testament, so that the reader may compare it with the original of the desers to do so. It cities the sections of the Roman law under which Christ was tried, and attaches a map of Palestine showing the places mentioned in the New Testament, and an angof the world showing the knowledge of geography at the time of the crudinism.

"In a letter to a Mr. Robinson, which evidently was written before he completed this work, Jefferson refers to it as follows:

'I, too, have made a wee little book from the same materials which I call the "Philosophy of Jesus." It is a paradigma of his doctrines, made by cut ug the texts out of the Book and arranging them on pages of a blank book in a certain order of time or subject. A more beautiful or precious morsel of ethics I have never seen. It is a document in proof that I am a real Christian; that is to say, a disciple of the doctrines of Jesus, very different from the Platonists who call me infidel and themselves Christians and preachers of the Gospel, while they draw all their characteristic dogmas from what its authors never said or saw. They have compounded from the heathen mysteries a system beyond the comprehension of man, of which the great reformer of the vicious ethics and deism of the lews, were he to return to earth, would not recognize one feature. If I had time I would add to my little book the Greek, Lutin, and French texts, in columns side by side, and I wish I could subjour a translation of Gassendi's syntagma of the doctrines of Epicurus which, notwithstanding the calumnies of the Stores and caricatures of Cicero, is the most rational system remaining of the philosophy of the ancients, as frugal of vicious indulgence and fruitful of virtue as the hyperbolical extravagances of his rival sects,"

# ALLEGED HERESY OF A METHODIST

OUTTE a sensation has been created in the Methodist Episcopal Church by the radical niterances of Prof. Charles W. Pearson, head of the department of English literature in the Northwestern University (Methodist), at Evanston, Ill. Zion's Herald (Boston, Meth. Episco) declares that this is "the worst case of heresy that we have ever known in the Methodist Episcopal Church, if not, indeed, in any orthodox body." Ile "not only eliminates everything that is supernatural, but accuses every minister and Bible teacher of rank hypocrisy." The same pager says further:

"There can be no condonation of his deliberate and libelous utterances. Because of his Dirutal assaults upon the vertices of Scripture, upon the person and supernatural work of Jesus Christ, upon the Methodist Episcopal Church, and his believing mittitudes at home and in the foreign field, we unequivocally demand his diamissal from his professorship. The Methodist Episcopal Church allows marked tolerance in individual opinion on non-securitarily, but it has no place in its fold for any man who attacks essentially, but it has no place in its fold for any man who attacks purge itself of the unbearable reproach which this man has brought upon it, and upon the denomination of large."

The Methodists of Chicago are equally stirred over Professor Poarson's alleged heterodoxy. Several pastors have preached sermons on the subject, and at one of the weekly meetings of the Methodist ministers of Chicago, a presiding elder, the Rev. F. A. Hardin, is reported to have said: "It I had the power and ability, I would skin that man, salt his hide, and tack it on the barn-door, before the ordinary preacher could sharpen his jack knife on his boot-leg." He further expressed the unministerial desire to "stand him on his head and pour vinegar into both ears, and let him remain that way until he got some seines." Commenting on these and similar amenities, the Chicago Trib-mer remarks, in humorous vein:

"When Professor Pearson, of Northwestern University, left his own peaceful domain of English literature, where he was a kind of priest to the muses in general and dwelt 'in regions mild of calm and screen air,' it was rather unfortunate that of all the foreign fields into which he might have strayed he should have chosen that particular one in which hard knocks are most to be had and in which only the trained controversialist is likely to escape being torn to pieces. This is the point on which Professor Pearson should be commiserated. He has gone into a fight where the amateur is usually unlossed and stampled into the must."

Professor Pearson's chief offense is his published statement that "Biblical infallibility is a superstitions and hurtful tradition," and that the miracles of both Old and New Testaments are "mere poetic fancies, incredible and untrue," The stories of the fiery furnace, the "ravens" of Bijah, and the dividing of the waters are declared to be "rude and childsis legends," as are also the miraculous stories of the New Testament. In considering the claim made for divine authorship of the Bible, he says: "The ten commandments were said to have been written by the finger of God on tablets of stone. If this language is not figurative, it is legendary and incredible, and no similar claim is made

for any other part of the Bible." He bases his opposition to the

miraculous upon his belief that "God is a spirit and speaks to man as a spirit and through the spirit," and that "all spiritual truth comes to man through his brain and conscience." The following is considered the most objection able paragraph in

"Jesus told the scribes and Pharisees that they had made the word of God of none effect through their tradition. Very many of our religious teachers of to-day

his paper

PROF. CHARLES W. PEARSON

are doing the same thing. Modern preaching lacks truth and power because so many churches ching to the utterly untenable tradition that the Bible is an infallible book. This dogma is their besetting sin. It is the golden call of their idolatrous worship. It is the palpable lie that gives the ring of insincerity to all their noral exhortations.

The Christian Advocate (New York), the official organ of the Methodist Episcopal Church, judges Professor Pearson's case no less severely than does Zion's Herald. In an editorial article, bearing the title "A Momentous Issue," it declares:

"Either Professor Pearson believes what he has printed or he does not: If he does, his sentiments disqualify him for the position there. If he does not believe, his indiscretion disqualifies him. Any claim from any quarter that he should remain impeaches either his sense or his morality.

"If professors avowing such views are to be retained in Metholdist institutions, even at the price of silence hereafter—since without explicit retraction their mere presence there will be a perpetual reaffirmation of those views—then among the chief coso of the Methodist Episcopal Church must be counted officers responsible for such retention."

The Advance (Chicago, Cong.) remarks that it seems just now to be a fail amongst a certain small class of college professors to win "cheap notoriety" by assailing cherished beliefs. "In Professor Pearson's statement," it soys, "we find only a rehash of the old arguments against the miraculous; nothing which has not been answered again and again." The Boston Pilot (Rom, Cath.) says that the whole incident is a legitimate result of "the fundamental principle of Protestantism, private interpretation." It continues:

"If there is no infallible church, no divinely inspired Scriptures, what warrant for immortality, what profit in moral code and self-deaying life, in creed and public worship and missions to the heather? Whose books thoughtfully on the life of our time has ample evidence that, outside of the Catholic Church, these questions are asked oftener every day, and that they are steadily getting their logical naswer."

Unity (Chicago, undenom.) frankly accepts Professor Pear-

son's conclusions, and observes that his friends "have known him a long time as a man who has been doing his own thinking." It says further:

"If Professor Pearson is to be read ont of the church, let the church be equal to its obligation and its opportunity and keep on its works of expurgation until the Sunday-school teaching, the deaconate, and the pulpit, saying nothing of the pews of Methodism, are cleansed from this virus of rationalism, the leaven of reason. If the Methodist Church is not ready to enter into this wholesale expulsion of heresy, let it so modify its statutes and its discipline that a man may be a good Methodist and at the same time an honest thinker, a cultured gentleman who religjously is at home with the best thinkers and some of the poblest men and women of his generation. If Methodism does not find a way of reconciling John Wesley to Ralph Waldo Emerson and its thought of revelation to the law of evolution, then so much the worse for Methodism, for Emerson, evolution, and the Bible are to remain joint and harmonious factors in the religious life of the future."

In the daily press, wide comment is aroused by Professor Pearson's alleged defection from Methodist doctrine. The Washington Post takes the view that "as professor of English literature it was not incumbent upon him to meddle with theology," and that "as an employee of a Methodist board he had no right to attack or declare his disbelief in anything which the Methodists that "while this turmoil is going on and theological bricks and stones are flying back and forth promisciously, there is danger that the Sermon on the Mount will be forgotten." The Spring-field Republican-finds Professor Pearson's position a "reasonable" one, on the whole, and declares:

"Every age, every generation, indeed, witnesses its new departures, and the views of those who lead in them are always re garded as 'destructive,' and are destructive. The sole question is: Do they destroy the truth, or only the old garments and etters in which the truth was dressed and hampered?... The religion of Jesus is not that which has become known as 'Christianity,' In its multitudinous and conflicting forms; it is simple, stirrect, and eternal; it is expressed in the two branches of the essential principle of the universe.—the principle of love, which science itself is now come to recognize—bove to God in all that is, and love to man. For we are all children of God and brothers of Jesus."

Methods of the Higher Critics.—Three writers have replied to the question. "Has higher criticism shed any light on Biblical trath?" in successive issues of The Scientary Magazine (Louisville, Ky.). The first of these, the Rev. T. T. Eaton, LL.D., editor of The Western Recorder, after answering the query in the negative, then illustrates the spirit of higher criticism by the following incident.

"At the Baptist Congress in Detroit (1894) Dr. Howard Osgood—the greatest Hebrew scholar in America—in the presence of men who were well informed on the subject and who were quite favorable to the alleged results of the higher critical, stated what those 'results' are, as told by their advocates. He asked to be corrected if In any particular hearred, but no correction was offered. From slips of paper he read statements of these 'results,' and when all present had assented to the correction of the presentation, Dr. Osgood startled them by saying that all his quotations were from Thomas Morgan, a Delst of the early part of the eighteenth century, and from Tom Paine, the wellknown infield of the latter part of that century."

Dr. Eaton furthermore has slight respect for the methods of the higher critics in arriving at their conclusions. In substantiation of his arguments he cites the following:

"Not long ago two leading ministers In the North united in writing an account of a great religious gathering, and they sent their combined article to a number of 'higher critics,' requesting that they separate it into the two documents, giving to each of the two authors his portion. Their failines were most egregious, and no two of them agreed, because they worked independently, And yet these men, utterly unable to resolve an article, avorably written by two men, in plain English, and written in their own time and country, into its original documents; these men are cock-sure they can correctly divide a book, written in Hebrew thousands of years ago, with no evidence of composite authorship, so as to give each supposed author his exact portion! And they claim to do this so accurately that they divide a single sentence among three authors, with perfect confidence!"

# SIGNS OF A UNIVERSALIST TREND IN THE CHURCHES.

A N editorial under the title, "The Love of God for All Men," appeared in The Preshyterian Banner, a few weeks ago, in which the writer takes the ground that the love of God is one and the same in regard to all men, without distinction or differentiation. "At some points," says The Preshyterian (Philadelphia), in surprised comment, "the article borders closely upon Universalism, if it is carried to its logical conclusion, and at other points it shows an Atminian somist."

The Rev. James D. Moffat, D.D., president of Washington and Jefferson College, and one of the editors of The Banner, who took a leading part in the last General Assembly, and who was mentioned as the possible successor of Dr. Purves in the Fifth Arenne Church, New York City, is supposed to be responsible for the article. The paragraph in the editorial which is considered most objectionable was as follows:

"While there had been thus far no denial of the claim that God does love all men, saints and sinners, saved and loal, elect and non-clect, yet some attempt has been made to distinguish two kinds of love, one exercised toward those sinners who are finally saved and the other toward those sinners who are finally saved and the other toward those sinners who are finally lost; or to express the same distinction in technical terms, God loves the elect with one kind of love, and the mon-elect with a different kind of love. This attempt can hardly fail to produce confusion of thought and to raise more difficulties and doubts than it promises to solve. When one elaims that there are two distinct kinds of love in God, he should point out the respects instity the classification proposed, and that the two are not different developments of the same kind."

The Presbyterian declares that this looks like a recession on the writer's part from a position long held by Calvinistic theologians, since "he recognizes no difference in the love which God has for those whom If has 'chosen in Christ Jesus to everlasting life' and those whom If has out." It continues.

"Only on the basis of a distinguishing love for His own people can we understand wily He speaks to them so constantly in the way of promise, and help and reward, as He does from the time of the first Mésslanic promise in Genesis to the close of His revelation to His schurch. The entire trend of the Scriptures is in the direction of a separate and distinct 'seed' taken out of all nations and tribes and conditions, for the peculiar and distinct manifestations of His grace and glory... The Bunner's reasoning would make God's love dependent upon man's activity. It would take away the free sovereign love of God as a precedent to that of His creatures.

The Heratia and Preshyter (Cincinnati) comments on The Ranner's editorial by saying: "We do not see how there can be a 'development' of love or of any other attribute or emotion in the mind of God. As He is changeless, how can there be a development going on within Him? As His love for His people is an eternal love we do not see how it could have developed for something else."

A similar "squint" toward Universalism was manifest in the reports of a discussion in the recent Baptist congress in New York on "The Function of Penalty in the Christian Religion," Says The Congregationalist (Boston):

"Twenty years ago no minister in a Baptist assembly would

have questioned the fixed and eternal punishment of the sinner who died unrepentant. According to the reports in Baptist newspapers the impression is given that opinions for and against this position in the congress were nearly evenly divided. . . . One speaker held that punishment is the result and action of a natural law, that character determines destiny, which is eternal. But, on the other hand, another speaker said that if penalty is simply a natural consequence it has no function in religion. God is the Father, sustaining loving relations with His children, and this gives penalty a function in Christianity. Other speakers held that punishment springs from love, that its purpose will be fulfilled in love, that the doctrine of annihilation is a confession of failure, and that good will be the final lot of all. It does not seem strange that the assertion that this is not Universalism should have called forth a ripple of laughter, but we are sure that the discussion of this subject in former times would not have elicited, as The Examiner says a paper on this subject did, 'frequent laughter and applause,'

The Universalist Lender (Boston) thinks that these and sminlar signs of the times are of considerable religious significance, and declares: "It would take a large section of our paper to republish all the evidence of change that is taking, and has taken, place in the theology of the modern church. The change has not been limited to any one denomination. Tho the Congregationalists are in advance of their evangelical neighbors, they are obliged to keep moving lest they be overtaken. The Baptists have, in some sections, been a little more statiwart than others in upholding the standards of orthodoxy, but even they have had new light."

# RELIGIOUS COMMENT ON CANON HENSON'S PLEA FOR CHRISTIAN UNITY.

ANON HENSLEY HENSON'S article on "Our Unhappy Divisions," which appeared in The Contemporary Review (December), and from which we quoted in our issue of January 4, has had the effect of bringing the whole problem of Christian unity into prominence in the religious circles both of England and of this country. The eurrent issue of The Contemporary presents as a sequel to Canon Henson's pica for a common Protestant communion-table a budget of "Comments" from prominent church dignitaries. The first is from the pen of the new Bishop of Durham, who declares that the article contained what he himself had long thought and had often wanted to say, but "it is now said much better." Dean Freemantle, of Ripon, is equally cordial, and observes that he has held these views for fifty years. Dean Stubbs, of Ely, is almost "in entire sympathy with Canon Henson in this matter," On the other hand, Dean Kitchin, of Durham, says, in somewhat cynical vein, that such brave attempts on behalf of peace and unity fill him with profound gratitude,-and with a still more profound despondency. It seems so simple, so beautiful, so true; and yet one knows that it will fail. Dean Stephens, of Winchester, is frankly adverse. His position is that the proposed union with Nonconformist churches "would lead not to fusion, but to confusion," Besides, it "would forever destroy the hope of a closer fellowship with our brethren of the Eastern or the Roman Church, who are more numerous than the members of all the 'non-episcopal churches' put together."

The Rick\* (London, Prot. Episc.) unreservedly indorese Canon Henson's position, and thinks it must be very satisfactory to him to find that his "admirable article" is viewed so favorably by the Bishop of Durham and three deans. The Episcopal Churck Review (London) and Giarathia (London) take a more conservative position, and the latter paper remarks that it would be well to panse before consenting to a step which "may lead to very far-reaching issues indeed." The Christian Commonwealth (London, Ind. Nonconformist) declares that "the predominant reling raised is deckledly hopeful." and adds "It begins to be

evident that a strong reactionary current has set in against the Puseyite tide in the Church of England. "The Christian World (London, Ind. Nonconformist), while not unfriendly to the ideal of Protestant unity, is hardly ready to accept the view that "there is no longer anything vital about which to differ." "To any one who will think out their full significance," it says, "the existence of a state-established and controlled church, and the doctrinal teaching woven into the very fiber of Anglicanism, present sufficient evidence that the ration d'Itre of Nonconformity has by no means passed away,"

Canon Henson's views are widely commented on in the religious press of this country. The New York Churchman, while favorable to the ideal of Christian unity, regards the canon's program as premature and impracticable. The Advance (Chicago, Cong.) regards the canon's article as a noteworthy sign of the times, but thinks that the Established Church of England will "move very slowly," The Episcopal Recorder (Philadelphia, Ref. Episc.) is of the opinion that "free churchmen everywhere will surely appreciate this clear and manly utterance"; and Zion's Herald (Boston, Meth. Episc.) believes that the views of "the eloquent, tearless, and broad-minded capon" must eventually prevail, even the his attempt to achieve unity may be temporarily unsuccessful. "The one vitni, indispensable prerequisite to Christian unity," declares The Christian Work (New York, Evan.), "is to be found in a return to the recognition of the perfect validity of the non-episcopal ministries."

A very different view from the majority of those quoted is that taken by The Christian Astrocate (Nashville), the general organ of the Methodist Episcopal Church, South, which expresses the opinion that the present overtures on the part of the Church of England are due to its isolated position in the religious world. "On the one hand," it declares, "the Church of England is dissowned and derided by the Roman Catholic Church, which now more than ever refuses to recognize its mistry or to admit the validity of its sacraments; and, on the other hand, it dissowns and derides all the other Protestan churches, looking down on them with an air of patronizing superiority that would be amusing if it were not so pitiably sad." It continues:

"The time is coming when it will be necessary for Methodists to stand on the defensive more vigorously than they have ever before done. The policy of letting things drift is wholly wrong and must be abandoned. Our people must be instructed, else they will sooner or later become the prey of every designing proselyter that may wish to seduce them from the church of their fathers. The doctrine of a postolic succession is 'good bair for catching gudgeons,' but it has no force with those who are taught in the truth."

Canon Henson's point of view has found unexpected support from the Rev. E. Winchester Douald, rector of Trinity Church, Boston, who holds the same opinions as to the validity of the ministerial orders of non-Episcopal churches. In a recent sermon he said:

"Neither Episcopacy nor Preshyterianism ever saved a soul but Christ manifesting his power and the grace of his sacrament through his Episcopacy and Presbyterianism, as the differing channels along which his love and mercy run to meet our human needs.

"Now and then one hears the antiquated assertion that only ministers who have received Phisosopal ordination are competent to administer the Lord's Supper. The answer is that millions of souls have becure freished and strengthened by that holy learn ministered to them by men on whose heads no bishop ever laid his hands. Long ago the Lord's Supper would have eeast to be celebrated in any church if it had no power to convey real grace to them that receive it. It is it is experienced, verified, vinne help which perpetuates it through the ages, not external authority or peculiar methods of administrations.

"If any one church had the exclusive power of conveying

through it sacramental grace, we may be sure that all souls who desire the fullest measure of Christ's grace would be found in that church and no other. It must be so. The history of more than 300 years has proved it."

"This is precisely the doctrine which Canon Henson is preaching in Westminster Abbey," comments the Boston Congregationalist.

# THE SCOPE OF THE NEW PAPAL COMMIS-

MUCH interest is evinced, by Protestants as well as by Catholics, in the pontifical commission appointed by the Pope "to consider all questions connected with Biblical studies." An authoritative statement from the Rome correspondent of the London Tablet gives some interesting details as to the constitution and scope of this new body. Its members are as follows: Cardinal L. M. Parocchi, vice-chancellor of the Holy Roman Church, president: Cardinals Fr. Segna and I. C. Vives v. Tnto, "assessors": and Father David Fleming, O.S.F., head of the Order of Friars Minor, secretary and "consultor." The other "consultors" are the Very Rev. Van Hoonacker, professor at the University of Louvain; the Very Rev. Grannan, professor at the Washington University; the Very Rev. Fracassini, professor at the Seminary of Perugia; the Very Rev. D. E. R. Jorió, professor at the Seminary of Palencia in Spain; the Very Rev. Esser, O.P., secretary of the Sacred Congregation of the Index; the Very Rev. D. Vigouroux, professor at the Paris Institute; Father de Hummelauer, S.J., of St. Ignatius's College in Holland; Father Gismondi, S. J., professor at the Gregorian University in Rome; Dom Ambrose Amelli, O.S.B., Prior of Monte Cassino; the Very Rev. Robert Clarke, D.D., priest of the archdiocese of Westminster; and the Very Rev. D. A. Poels. D.D. of the diocese of Ruremonde in Holland.

"The none of the cardinals at the head of the commission can be called 'specialists' in Scriptural studies," remarks the correspondent of The Tablet, "they are all familiar with the modern phases of the controversy, and can appreciate at their true value the arguments that will be laid before them by the 'consultors.' Their judgment must be given from the theological standpoint, and they are all good theologicans." The writer continues:

"The scope of the inquiry is to ascertain the limits of the freedom which is allowed to the Catholic exegetist in the Biblical questions of the day; to point out definitely conclusions that must be maintained in the interests of orthodoxy, others that must be rejected as incompatible with, or dangerous to, divine faith, as well as the debatable ground between the two where each one is free to hold his own view. In the tunualt of conflicting opinions that has gathered round the sacred text for many years past, the lack of conspicuous landmarks of orthodoxy has made itself felt. Extreme conservatives, in order to strengthen their position, were inclined to make common cause with Protestant conservatism which rests on a different basis and bears a totally different character to Catholic conservatism. Their opponents in many instances were charged with liberal Catholicism for no other reason than their sympathy with modern learning. On the other hand, it can not be denied that there were extremists in the ranks of the progressive party, if I may so call it, who merited the severe judgments that were passed upon them. It is possible to acknowledge the undoubted ability and erudition of the works of non-Catholic writers on Sacred Scripture, and the help which they give in the clucklation of the sacred text, without accepting indiscriminately the positions which they advance."

The work undertaken by the present commission is expected to be largely along the lines laid down in the encyclical "Providentissimus Deus" of 1893 on the inspiration and authority of Holy Scripture. The correspondent says further:

"The need of further authoritative pronouncements is con-

firmed by the institution of the present commission. The names of the 'consultors' chosen are a guaranty of the broad spirit of inquiry in which the Holy See is approaching the investigation, They represent the various schools of thought both moderate and advanced, and, on the whole, are well acquainted with modern scientific methods, and with the claims and achievements of the 'higher criticism.' They are scattered over different countries, each with its own intellectual atmosphere and its peculiar currents of thought, and it will be the duty of the 'consultor' to take note of any ideas whencesoever they may come, from Catholic or Protestant or rationalistic sources, which may have a scientific value in respect to the questions that are submitted to his research or judgment. The series of questions that have been formulated for their study and discussion are under the pontifical secret, and may not be divulged. But we know that they have been framed in the most comprehensive spirit. Sincerity and thoroughness are to be the characteristic notes of the inquiry. Modern difficulties will be faced in all their actuality and a decision will be given wherever it is possible. Each 'consultor' will be encouraged to speak out his mind quite freely and urge whatever reasons he may think relevant to the matter in hand. He may obtain help from whatever quarter he pleases in the elaboration of his argument, without, however, communicating the pontifical secret. The 'consultors' who live in Rome, or who can be called thither without much inconvenience to themselves, will take part in the oral discussions; those who are at a great distance will make their contributions in writing, and be kept informed by the secretary, Father David Fleming, of the course of the deliberations. The meetings will be held at the pleasure of the eminent president when sufficient matter is in hand to make a debate profitable. All the 'consultors' will meet in a body only on rare occasions. It is impossible to foretell what will be the ultimate issue of this important commission. An inmediate effect, however, ought to be the tranquillizing of minds which were restive under the uncertainty of the present stage of Scriptural controversy. We may rest satisfied that the whole question, as far as it concerns the loval attitude of Catholics. will be thoroughly investigated."

A noteworthy expression of opinion from a non-Catholic source on the fundamental issues involved in present-day Biblical controversies appears in the editorial columns of the New York Sun. We quote as follows:

"This Vatican commission, we are told, is to afford 'Catholic scholars all over the world the fullest opportunity of stating their views and difficulties and bringing them to the direct notice of the Holy Sec. 'The Pope having already championed the absolute verity and supernatural inspiration of the Bible as the word of God, such difficulties submitted will be explained away, of course, in harmony with that positive and uncompromising Catholic decision. That is, the purpose of the commission is not to simulate criticism of the Bible after the fashion now as general in Protestantism, but to slience it and oppose to it the final pontifical judgment. The appointment of the commission, however, to Catholic good at this never critism has brought difficulties' to Catholic good at this never critism has brought officulties' to Catholic good and this never critism has being the control of the commission and the protection of the commission of the commission of the protection of the commission o

"Undoubtedly, if Christian theology is to stand at all, belief in the Bible as supernatural inepiration must continue. Even for Catholica belief in the miraculous authority of the canonical Scriptures is essential, for if it is destroyed the authority of tra dition also will be involved in the destruction. The assault is on all mirackes, all supernaturalism. The present critical method applies to the miraceles a scientific test, or a purely natural test, undernountable.

"It is not the Pope, however, but the great churches of Protestantism, which need to appoint a commission, or commissions, "for the consideration of all questions connected with Biblical studies." The time is coming, if indeed it has not come already, when these churches must take their stand definitively and decidedly on the question whether the Bible is of God or only of man. As it is now, the Pope is the sole bold, postive, and uncompromising champion of the Bible as the word of God."

—Noblipative (Zwich).

A REW FRIENDSHIP.

A R

not be denied. It appears to have been thought in Berlin, as in the other leading cities of Europe, that Spain's resistance would not collapse so speedily and so utterly. Afterward the German Government and the majority of the German press assumed a friendlier and more upright attitude toward the United States.

England's desire to have it appear that she alone was the friend of the United States is alluded to, as well as the misunderstandings regarding the importation of American meat. "And even in Berlin the conviction slowly dawned that the great republic of the West became a factor to be reckoned with not only commercially but politically." Our authority proceeds:

"The news of Prince Henry's intended trip to America caused surprise there, but it was agreeable surprise. In the United States, as well as in Germany, friendly relations between the two countries are desired, and anything conducing to this end is welcome. Prince Henry will be the grest of President Roosevell in the White House, and there will be a suitable exchange of manifestations of esteem, altho not in the effusive fashion characteristic of the meetings of European princes.

The political outcome of the trip' can not fail to be of importance, in the opinion of the Lokal-Nazeiger (Berlin), for a mere exchange of courtesies is not the only object which the German ruler has in view. The Bêrsen-Courier (Berlin) emphasizes this view and rejoices that England has been unable to hinder this prospective intimate connection between Germany and the United States. The Neuraten Nachrichten (Berlin) is pleased at "the pleasant official relations" that are coming. The Kilnische Zeitung says the German people are with Emperor William in this matter. The National Zeitung (Berlin) declares:

"The Prince's visit must put an end to the false assertions that Germany seeks to invade the political sphere of influence of the United States. Neither treaty nor alliance is required to accomplish this end. Since the existence of the United States, peace, friendship, and commerce have never been interrupted between that country and our own."

The silence of many journals, especially Conservative organs, is attributed to their dislike of the United States. The Berlin Tages-Seriong deprecates what it deems "gush" over the visit, while the Homburger Non-brickhten proceeds to denounce the Monroe Doctrine. It says.

"Has the Monroe Dectrine been sanctioned by all the American powers, or recognized as justifiable by European nations? By no means! It has no more validity than the much-cited will of Peter the Great. We confront simply an utterance of the United States. . . The doctrine that the United States may seerise a sort of protectorate over the whole American continent has never been admitted by any other power and never can be, that the United States is not pretension, it would never have attained its present dimensions. Let us hope that German policy will be more energetic in Venezuela, and will show the United States that it has no business of the Control of the Control of the Control of Central American state."

Austrian papers are of opinion that the visit may promote friendliness, but nothing more. French papers have very little to say one way or the other. English papers are not generally agreed. Says the London Spectator:

"The incident, in truth, tho a small one, and arranged from very obvious motives, is important as indicating, like a hundred other occurrences since the Spanish war, the wish of the European courts to include the great republic within the European comity."

There is general curiosity to see to what extent the German Emperor will profit by the affair. On this point the London Tablet says:

"When the Emperor's gunboats shortly set out to coerce Venezuela Uncle Sam may be expected to look the other way. That is the use of a tactful Emperor."—Translations made for The LITERARY DIGEST.

### THE COMING ELECTION IN FRANCE.

THE entire French political world has fixed its eyes on the coming elections, according to the fournal des Diebais (Paris), and is asking what will be the outcome. There is general agreement, it says further, as to the exceptional importance of the struyels:

"Altho the phrase has been used to excess, it is none the less accurate to say that the third republic is passing through a most critical period in its history. Whither are we drifting? Every one is asking the question. The elections will answer it. We are menaced by collectivism. Individual property rights are attacked by an ever-growing party, controlling a large number of newspapers, and wielding a considerable amount of governmental authority. Its progress in the past two years has been very decided. However, it is still forced to be more or less prudent. It still condescends to compromise. It awaits the coming elections in the hope that they will give it that additional strength which it needs to fully carry out its program. What it will do may be gathered from what it has done. The bill against the religious orders has deeply stirred the conservative element. It is but a beginning. Its application is suspended until after the balloting in May, and that application will be of the sort determined by the elections themselves."

The existing administration is then denounced, liberty of conscience is stated to be in peril, and France threatened by a "truly impious agitation," The Gaulois (Paris) and the Autorité

(Paris) advise the people to vote for the progressive Republican candidates rather than for the Socialist or Radical candidates. Certain editorial utterances in the Temps (Paris) having been construed in a similar sense, that journalist supporter of the republic protests. It makes allusions to anomalies in the position of the Waldeck-Roussean ministry, which is supported by a combination of those groups which do not wish the republic overthrown. It says:

"We are aware that the game of the reactionaries has been for thirty years to try to compromise the moderate Republicans. Now the reactionaries say to as in their newspapers: 'Our friends will vote for the progressives in the coming elections.' Here many deceptions of the same kind, we would be unpardonable if we put faith in this assertion. Moreover, even if the promator of the were kept.—which would surprise ns very much—we should feel no particular gratitude. It would simply mean that they felt to be to their interest to contribute no further, by lack of foresight and through malice, to the progress of revolutionary parties.

The same paper says, too, that it puts the preservation of the republic over and above everything. The Revue des Deux Mondes (Paris) says:

"Within four months of the election, the Government has lost half its majority. Nothing could equal the discretion with the the ministerial newspapers have spoken of this misadventure. What panegyries would we not have heard, on the other hand, if its majority had been increased, were it by only a dozen votes? But the figures speak for themselves and the nunistry will entitle the next session with diminished confidence. Does that mean that it will be overthrown? No. Not one person really wishes that just now. The elections are too near for anybody to accomplish anything efficacious. The general sentiment, aitho not avowed, is that in face of a policy which has already brought about some of its worst consequences it is better to leave the task of passing judgment upon it to the country at large,"—Translations made for The LITERARY DISCRET.

# THE PERPLEXITY OF THE HOUSE OF COMMONS.

THE prospect of a standstill in the business of the House of Commons, unless there is some reform in its procedure, greatly concerns the English editorial mind. Thus the London Spectator, in view of the reassembly of Parliament:

"Mr. Balfour treated the subject of Parliamentary procedure at Manchester this day week with great moderation and temper. His speech had nothing in common with the denunciations of obstruction which attribute every delay in the conduct of public business to the wilful wickedness of this or that section of the House. He realized that if all the members were of one party much of the present difficulty would remain. The real and ultimate cause of that difficulty is that att Westminster there are more than six hundred gentlemen all auxious to speak, and all after a fashion able to speak."

The real problem, or the more serious one, according to the London Timet, is to outwit the obstruction policy of the Irish members. "Mr. Chamberlain," it observes, in an elaborate study, "has definitely stated that the Government intend in the next session of Parliament to propose certain alterations in the rules of procedure, which will give to the majority of the House of Commons a greater control over its own business and a greater control over its own business and a greater control over the men who insult and outrage it." And The National Review (London) prints an article on "Precing the Honse of Commons," by J. Parker-Smith, in which a comparison with our Congress occurs.

"The House of Commons, like any sensible man whose desires exceed his means, must calculate the resources of time at its disposal and shape its expenditure accordingly. The coat must be cut according to the cloth. That is the lesson which the House has not yet taken to heart effectively. In America the same necessity was brought home to Congress many years ago, and

House took to itself the most drawic powers of deciding, by a simple majority, what amount of time, or whether any time at all, should be whethed to each subject. The methods adopted were fully described by Mr. Chamberlain in an article written eleven years ago, but more than ever applicable to-day. Powers corresponding to those assumed by Congress he considered equally necessary for the working of the House of Commons, but instead of their being secreiced by the resolution of a bare party more judicial body. The authorities to which the Mr. Commons is accustomed to yield deference are either committees of themselves or the chair. Mr. Chamberlain suggested that the necessary power should be given to a committee, and proposed a 'committee of rules' formed of the most experienced and impartial members upon the model of the committee of selection."

But the London Speaker warns the country that this cry for a "reform of procedure" masks an interested motive:

"It is undeniably important that the House of Commons should be relieved of a congestion of business which obstrates and embarrasses: Parliamentary energy. But the most important thing of all for Liberais is that the House of Commons shall retain its control, and that full opportunity shall be given there for the free discussion of public policy. That is a truth which is lost sight of in a good deal of the talk about business-like administration. It is a truth which is more important than ever at a time when the press of the country is coming more and more to represent a few powerful forces in our society as the instrument of interests often directly financial, and in many cases non-British in their origin and ain.

### TALKING THE GERMAN TARIFF BILL TO DEATH.

THE nethod which the opponents of the tariff bill have making long-winded speeches—is attracting great attention. The London Sycaker's Berlin correspondent thus describes the mode of operation:

"What the opposition can and will do is this. They can insist upon discussing every single one of the 946 articles contained in the bill. If a motion of closure is voted, they can demand a division by roll-call, and so on, throughout the whole of 046 articles. Every one of the Socialists will speak upon the bill, successively, and for hours together. If the members of the other parties grow weary of the fnn, and, as so often is the case in the Reichstag, refrain from attendance, the House will be without a quorum, and the opposition will obtain the upper hand. It is unlikely that gongs, or trumpets, or whistles, will be used; or that the methods of the opposition at Rome or Vienna of banging the lids of the desks will be resorted to. But the opposition is very determined, it is playing for a high stake, and will employ every legitimate means to obtain its end. If it comes to the test the opposition can only be defeated by absolute cohesion on the part of the majority, and by a full attendance in the House daily, and for weeks in succession."

The German Agrarian press is growing indignant at these proceedings and ealls for extreme measures. The Deutsche Tages-Zeitung (Berlin), a strongly Conservative sheet, wants to know "who is master in the house," adding:

"It is becoming more and more apparent that the Social Democrats, in combination with the Radicals, are masters of the situation, and have brought the deliberations to a standstill."

A similar complaint is made by the Kreus-Zeitung (Berlin), another Conservative sheet, which remarks that "the Left is playing with a two-edged sword. It is dealing the majority principle a blow and creating for coming minorities a baneful precedent." The semi-official Vestische Zeitung (Berlin) com-

"The majority are a unit in demanding that the duties be increased. But in this they are one only as regards the minority.

They are not agreed among themselves or with the Government.

The tactics of the German Conservative party, which consist in allowing the members of the Left to talk on without making any reply, are good enough, from the majority standpoint. The only question is the length to which all this can be carried. Herr Gamp has not sufficient sudifference to listen to Herr Stadthagen's talk by the hour and remain silent himself. And we must admit that if ever a talker knew how to put the nerves and the patience of his hearers to a severe test, it is Herr Stadthagen, There is no wearing him ont. . . . But there may be many changes in this contest. Hence the parties which see in the tariff a misfortune for the country should not relax their vigilance nor let themselves be intimidated by outeries against obstruction. They must hold firm to the conviction that they are serving the fatherland and the common good if they defeat this tariff measure."- Translations made for Tue LITERARY Di-

# GERMANY'S DISPUTE WITH BRAZIL.

ERMANY will take Brazil in hand in short order and show her that railway concessions to German capitalists can not be arbitrarily revoked, according to the Kölnische Zeitung, which goes elaborately into the difference that has arisen between the two Powers. It declares:

"Brazil will be the first to suffer if the guaranteed rights of a foreign creditor are violated. It is to be hoped that the Brazilian officials will realize this fact as the most serious side of the question.

It would appear, according to the same authority, that the difficulty is not with the federal Government c' Brazil, but with the state of Minas Geraes. The president of that state declared last November that the concession to the German railway company was forfeited:

"This unheard-of measure was based upon the fact that the railway corporation was in a receiver's hands and therefore unable to carry out its contract. The arbitrary character of this logic is manifest to every unprejudiced person. The object of every state guarantee of railroad obligations is to smooth the settlement of business troubles. But a state guarantee loses all value and becomes a source of peril to the corporation that obtains it if the state government, by failure to fulfil its obligations, drives a company to bankruptcy, and then, because of that bankruptcy, declares the concession forfeited.

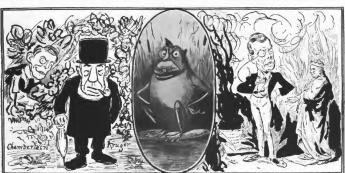

The bellicose attitude of this paper is not characteristic of the German press generally, with the exception of the Kreuz Zeitung (Berlin), which pays great attention to Germany's South American interests, and calls them "a great inspiration to world politics in the peaceful sense of the term."- Translations made for THE LITERARY DIGEST.

# BRITISH SOLDIERS AND BOER WOMEN

THE serious charges against the English officers and men, involving mistreatment of Boer women and girls in concentration camps and other places afforded by Kitchener's blockhouse system, are discountenanced in standard German newspapers. The Hamburger Nachrichten prints a reminder that English indignation against the German press is unreasonable on this account. The Frankfurter Zeitung deplores the extravagant lengths of the English press excitement resulting from "fabrications in German prints." The Possische Leitung (Berlin) improves the occasion to study at some length the relations between England and Germany, thus:

"The most serious differences of opinion have developed between England and ourselves over the Transvaul question. We can not help it. Even those Germans who try to form most disinterested views and who know themselves to be free from all prejudice against England are of opinion that in this matter England is pursuing a mistaken policy. She has, they think, begun a war to gain what could have been procured by milder means. The results of such a policy will be prejudicial to England. This view has been voiced by all parties in Germany, and England is very ill-disposed toward us in consequence,"

The gross character of the cartoons in certain German papers has been modified, but some English newspapers complain that King Edward is made the subject still of disrespectful pictorial

CHAMBERLAIN: "I'll bet you don't find me when you CHAMBERLAIN, THE POLITICAL ook for me to make peace?"

representation. The source of the more slauderous charges is indicated as follows in the London Spectator:

"The Daily Chronicle has unquestionably tracked down the lying story of the maltreatment of the Boer women in the Irene camp to a leaflet printed in America by Charles D. Pierce, 'Consul-General of the Orange Free State, ' reproducing an interview with a certain Fred La Velle which appeared in The Clarion Ledger, of Jackson, Mo., for May 14, 1901."

The situation of Germany, according to the Temps (Paris), is simply a case of "the pot calling the kettle black." It shows that great Powers are all alike in war-time.-Translations made for THE LIFERARY DIGEST.

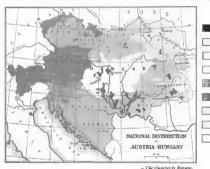

# THE THREAT TO END AUSTRIA'S REPRE-SENTATIVE GOVERNMENT.

"ROARING cannon-shot" was fired in the Austrian House of Deputies by Premier von Körber, according to the Neue Freie Presse (Vienna), when be threatened, in the Emfor things obscene. One of these vocabularies adapts itself, in its figurative floweriness, to good society. The other, borrowing its treasury of words from naked nature, is employed only in the most absolute solitude. These delicately susceptible people are the Oueeusland savages. Such an altitude of culture has not yet been attained in the Austrian Reichsrath."

The whole Austrian situation has been made the subject of an article in The Quarterly Review in which we are told that the "national question" is "merely whether the German language is to remain " as the official one. The non-Germans say it shall not. Hence "those bitter parliamentary battles, the noise of which was heard far beyond the bounds of the empire, while the shame of them burns like an inextinguishable brand in the history of Austria." Having given a history of recent parliamentary disorders, the article proceeds

"After a short provisional interlude, with Dr. Ritter von Wittek as Premier, the control was handed over to Dr. Ritter von Körber (January 19, 1900). But even he did not at first succeed in improving the situation thus reversed. As the Emperor saw

no possibility of doing anything with his present Parliament, he dissolved it; and the Ministry governed by Article XIV. That the Emperor might not be suspected of an insidi-Tabecha and (in Hungary) ous attempt at absolutism, he issued, toward the end of the year 1900, an order for another general election. , Certainly the majority of the population were tired of fighting; but thanks to the indefatigable energy of the agitators, the Radical party emerged from the contest of the elections stronger than ever. The Pan-Germans (.11/deutschen), as the German Radical party now called itself. had even grown from five to twenty-one members. As might have been expected. the very first sitting of the new Parliament was indecorous in the extreme; and, as usual, the Pan-Germans were the ringleaders." - Transla-

tions made for THE LITERARY DIGEST.

peror's name, to suspend the constitution and set up absolute government. The same paper continues

"If it be asked what led Herr von Körber to put such a possibility before the Reichsrath-the thing hinted at being really a usurpation and, when it fails, a crime-the only answer discoverable in his speech is that the representative body meets the endeavors of the executive 'too slowly.'

The conclusion at which this authority arrives is that while Herr von Körber's "shot " made "much noise," it was "fired too soon for a signal of distress " and is "too weak " to frighten. But the Fremdenblatt (Vienna), taking an opposite view, says:

"Can any one doubt that when the representative body betrays its incompetence to deal with the monarchy's most vital problems a severe crisis is unavoidable? If the Minister President, Dr. von Körber, did not shrink from allusion to the peril, it simply shows that he was frank with the peoples of Austria and plainly mentioned what has long oppressed them. Painful tho it be to allude to such contingencies, it is nevertheless the task of statesmanship to face facts."

The representative bodies of all lands have to solve something besides social, economic, and political questions, according to the Pester Lloyd (Budapest). They have to solve the problem of representative government itself. After severely condemning the deportment of the Austrian Reichsrath, this paper proceeds:

"There is one nation on earth that possesses two vocabularies

# POINTS OF VIEW.

GIRWAN HATRED OF ENGLAND.-The Anglo-German duel, as the fournal det Dibats (Paris) calls it, continues. It is true that the fighting is confined mainly to the newspapers. The Loodon Times is at the head of the English forces, but even so temperate a paper as the Nation (Berlin) is joining in the Irav on the German side. The Independance Relge (Brussels) says the uproar is largely because the English press regards Mr. Chamberlain as the "governing will of the nation," and rescots attacks nean him

THE KONGO HORRORS - The atrocities in the Kongo Free State are doe. according to the Parm Temps and other papers, to the fact that the revenues are derived from the rubber trade. Rubber is got from the natives compulsion. The Daily Arter (London) says: "The unspeakable horors companison. In pany setter themount says: "The unspeakance hereors narrated by Captain Iturrows-life payment of canoibal workers by corpses, the horrible mutilation of workers-all these things are even worse than the slave trade. Slavery is in history the first step in the emergence from mere massacre; and now in Central Africa we seem to have got back to the first stage."

POSSIBLE DEATH OF SPAIN'S KING .- The Spanish monarch comes of age In a few months, but, according to an article by John Foreman in The Conin a rew months, out, according to an article of joint stellar in that his majesty will not live long enough to leave legitimate issue." Of the situation in Spain the same writer says; "Priestly influence continues to undermine all attempts at social progress. It has no connection whatsoever with religion, pure and simple ; it is a vast political organization, much stronger than any other in the country. It imposes itself upon all classes of society from the palace to the cottage. It terrifies alike great ladies and peasant women, who in turn exercise their sway over the acts, if not over the minds, of the men. It imbnes a sentiment of horror for everything which signifies colightenment, and 'Liberalism' is frequently, to this day, openly denounced from the pulpit throughout the realm as a persicious, soulwrecking ippoyation.

# NOTABLE BOOKS OF THE DAY.

### MR. HOWELLS'S STUDY OF HEROINES.

HEROINS OF FICTION. By W. D. Howells. Cloth, a vols., pp. 230 and 276. Harper & Brothers, New York.

HESE books, by an acknowledged authority, the critic prepares himself to read with care. We have so read them to the end; and

they have impressed us as consisting one quarter of keen, critical observation, really enlightening, and three quarters genial superfluity. It is needless to say that Mr. Howells writes of the novel as few critics can; and that the present volumes show, as all his others show, the widest reading and the most loving sympa-

W. D. HOWELLS. the great and beautiful are to be found. The "heroines of fiction constitute pretty much the whole of fiction, and Mr. Howellshas treated

pretty much the whole subject. It goes without saying that the point of view of the criticism Is that of a realist, who is interested in human nature rather than inspiration, who prefers perfection of form to any sublimity, and who has no patience with anything subjective. A lyric novel is something to which the author has given little serious thought, and the least introduction of a novelist's own personality is as a matter of course passed by as had art. Thus it happens that of two English novelists who are epochmaking men of genius-Fielding and Thackeray-the former is dismissed with one or two phrases of contempt, and the latter is less heartily praised than Jane Austen and Henry James, and declared less great than Authory Trollope. Also it is to be noted that the author's sense of proportion fails him somewhat when he comes to the numerous company of modern heroines, and that there is more praise distributed among them than they deserve.

### SONGS THREE THOUSAND YEARS OLD.

THE GATHAN OF ZARATHUNTHA (Zoronster), in Meter and Rhythm. By Lawrence H. Mills, D.D., Professor of Zend Philology in the University of Oxford. Cloth, 61/x 94/in, 213 pp. Henry Frowde, Oxford University Press, New York.

MERE is no doubt that the prayers and maxims of Zoroaster reach the highest grade of any ancient religious work outside of Scripture. Indeed, certain investigators like Professor Cheyne have gone so far as to suggest that some of the Psalms were influenced by Zoroastrian principles. Be this as it may, all students of the higher thought will be grateful to Dr. Mills for rendering accessible the ancient treasures of wisdom contained in the Gathas. In the Gathas alone, Zarathustra can be found as an historical person, the Zarathustra of the later Avesta and of many other later documents of Zoroastrianism (including his so-ealled history) being "of course," to use Dr. Mills's language, a mythical person. "The fictitious importance attributed to all the Zarathustras scattered up and down the pre-Christian ages, was," says Dr. Mills, "borrowed from the singular man whose personality . . , is so strikingly revealed in these early pieces," the Gathas. And Professor Cheyne has remarked that the public to which Zarathustru appealed in these writings was higher in tone than that appealed to in the majority of the Psalms | The Gathas are rough poems, written in various meters at least 700 to 1,200 years before Christ, by men deeply moved by a religious crisis in some country-Afghanistan perhaps-in contact with ancient India. And some of the meters used date back to the days when Indians and Iranians were ore people.

Students would have been more grateful to Dr. Mills if he had expressed the Zoroastrian maxims in an English somewhat less crude and more intelligible than the somewhat obscurely expressed verses which contain his version. It is true he supplements this hy a word-for-word literal account, but this tends to make confusion even worse confounded. It is difficult to get much spiritual nourishment out of such lines as the following :

To You cried the Kine's soul; for what did Ye form? who made me 'On me come wrath and the blow, the murder's shock, contempt's defiance:

Than You none other have I, then prosper, Thou guardian, my tillage! Nor again is this made more comprehensible by the accompanying word-for-word translation :

To you the soul of the Cow cried-lamenting : 'for whom did yo make me ( :- who fashioned me ?; (b) -against me (are) the fury-of-rapine, and factual) violence, the-blow together-with-slaughter-by-the-sword, insolene and thievish-might. . . .

Still, no one can doubt the competence of Dr. Mills to give the meaning of the original text so far as modern scholarship has penetrated it. But we should have been more grateful to him if he could have given a more artistic form to his version.

# HOW A HERO IS KEPT MOVING.

THE STRENGTH OF THE WEAR BY Channey C. Hotchkins. Cloth, ex 717 in., 371 pp. Price, \$1.50. D. Appleton & Co.

STUDY of Mr. Hotchkiss's latest romance in the light of its title will do much to explain the strength of the weak historical fiction with which the reading public has been deluged.

In the first place, the title is the main eredential to popularity. Just as certain names of persons are subtly aristocratic in suggestion, so certain names of books have a literary flavor. A negro truck-driver in New York was assessed the other day on \$100,000 worth of personal property because he hore a distinguished Southern patronymic and parted his Christian name in the middle. A novel will sell for a time because its name has the syntactical construction of a Gilbert Parker title, and the pungent flavor of a Corelli paradox.

From a logical and rhetorical point of view, "The Strength of the Weak " is a pixer title. It is only generally applicable, and is positively contradicted in a number of places where the hero, who is, if elaborate description counts for anything, the most perfect master of swordplay that has yet appeared in fiction,

is opposed by fencers who have no more chance of escape in the encounter than the coon that met "The Ahnakis Colonel Crockett. Eel, or the Indian Trailer," would have been a more logical title, for the relentiess pursuit (the why relentless does not clearly appear) of the hero by a eunning Algonquin forms the basis of the entire plot, causing all sorts of unexpected complications, and keeping the novel a score of times from coming to an untimely end.

After a good title has been ehosen, the plot is of secondary consider. ation. Adventure hooked upon adventure (these do not need even to dovetail) is the only requirement.

CHAPACEA C HOACHARS

In the present instance, the heir of a Canadian seigniory (of English blood in order to make his going over to the enemy appear less treasonable) in the time of the French and Indian wars, is ousted from his estate by a rchabilitated outlaw. and, by fighting in camps and fleeing through forests, joins the English troops near Albany, and at the fall of Quebec come into his own again, The original device of the book is the creation of a trailer to keep events moving. It is quite a loss to the author that this character, the Indian "Eel," is killed toward the close. He might otherwise have formed the motive power of a dozen future novels. But, like Sherlock Holmes, he may be resurrected.

# NATURE AND PATRIOTISM.

OUR NATIONAL PARKS. By John Muir. Cloth, 81/2 x 61/2 in., 365 pp. Price, \$1.75 net. Houghton, Mifflin & Co.

HERE is a book to stir the citizen, the lover of nature, and healthy admirers of good waying and John Muir, the author of "Our National Parks," seems to have a proper pride as a patriot, his sturdy, soul-impregnated love of nature is the dominant passion in him. What a wanderer he has been, to be sure, over the wild acres of native loveliness the West enfolds! Without any pedantry or fatiguing insistence, his speech betrays the scientist as its flowery style and live metaphors present the lover of earth's

beauty. You can not get away from John Muir in these pages, nor have you the faintest wish to do so. He has had a close personal familiarity with the five National Parks-Mt. Rainter, General Grant, Sequoia, Yosemite, and the Yellowstone, all west of the Mississippi, and the thirty-eight forest reservations. The Government has over seventy million acres of territory set apart as national reservations, and is behind all other civilized countries in its care for them. There are tears in Mr. Muir's voice as he pleads for the preservation and decent protection of our noble forests. "It is not yet too late for the Government to begin a rational administration of its forests." he says, after quoting Mr. Bowers to the effect that the value of timber stolen from government lands from 1881 to 1887 inclusive was valued at over thirty-six million dollars, while losses in the same by fires amounted probably to over two hundred millions !

The book is very interesting. Mr. Muir is intensely, quictly sincerc, an enthusiast who glows with a steady flame. Some of his poetic touches are as naive as they are original. He has no hard word for anything in Nature. Witness his delicious apology for the rattle-"Poor creatures, loved only by their Maker, they are timid and bashful, as mountaineers know: and tho, perhaps, not possessed of much of that charity that suffers long and is kind, seldom, either by mistake or by mishap, do harm to any one." This gentle woodsman had one crime upon his soul, the slaying of two rattlers! "I felt degraded by the killing business, farther from Heaven, and I made up my mind to be at least as fair and charitable as the snakes themselves. The croaking frogs are "a brave, cheery set." Of the water-ouzel (a plain bird about the size of a robin) he remarks : " No wonder he sings well, since all the air about him is music: every breath he draws is part of a song, and he gets his first music lesson before he is burn; for the eggs vibrate in tune with the tones of the waterfalls,"

He tries to get to a 3,000-feet ridge to study an avalanche. He preelpitates one and has a ride back on it, the return trip taking a minute while the ascent required a day. He joyfully says of this: "This flight in a milky-way of snow-flowers was the most spiritual of all my travels, and, after many years, the mere thought of it is still an exhibara-He also assisted at an earthquake. "It seemed to me that if all the thunder I ever heard were condensed into one roar, it would not equal this rock-roar at the birth of a mountain talus. The sound was inconcelvably deep and broad and earnest, as if the whole earth, like a living creature, had at last found a voice and was calling to her sister planets."

The disposition to quote from this vigorous, genial mountaineer is almost irresistible. Through his steadfast love of nature breathes a simple sense of the Power behind Nature, to this observer evidently a tender, personal God. Where he speaks of the year's seasons in the Sierras he is like the Psalmist calling upon the snow and rain and heat and cold to bless and praise the Lord.

He revels especially in the Sequoia gigantea, rulgo, "the Big Trees" of California, "the king of comfers, the noblest of a noble race. So old, thousands of them, still living, were in the vigor of youth or middle age when the starled the Chaldean sages to the infant Savior's cradle.

This book of Mr. Muir's is one every American should read, and he will find a pleasure in doing so. Buffon's phrase, Le style Cest I homme, was never better exemplified. In speaking of the Sierra Nevada range he says : "To defrauded town toilers, parks in magazine articles are like pictures of bread to the hungry. I can write only hints to incite good wanderers to come to the feast." Mr. Muir's hints are worth taking.

# STORIES OF LOVE AND POLITICS.

STRATAGEMS AND SPORS By William Allen White. Cloth, 291 pp. Price, \$1.50. Charles Scribner's Sons, New York.

HESE are "stories of love and politics"-more especially politics -by an author who has become known for his interest in the subject : Mr. White, it may be remembered, is just at present threatened with a lawsuit by a certain senator whose career be sketched

all think it a great victory for "public opinion."

appoint a corrupt politician, because WILLIAM ALLEN WHITE he can not face the wife of one of his friends whose career is to be helped by the "deal." The newspapers

The five stories in the volume show knowledge of the subject; they

have good literary quality and all are interesting. Two are especially so, the last two of the book. One of them tells of a corrupt senator, and traces in dramatic fashion his plottings and his downfall; the uninitiated reader hopes that there are not many such persons loose in our Senate. The other story-it is always safe to read the last of a volume of short stories, for the best is put in them-is the whimsical and pathetic account of "Dan Gregg," a character with a gift of oratory and who catches the tide of his affairs at the flood. There is a popular up-rising out in this prairie State, and Gregg and his oratory capture a governorship; he does not know what to do with it when he gets it, however, and things go to pieces in a curious, and tragic, fashion

### WHAT THE HIGHER CRITICS MAKE OF CENESIS

THE LEGENDS OF GUNESIS. By Herrman Gunkel, Professor of Old-Testament Theology in the University of Herlin. Translated by W. H. Car-ruth. Professor of German' in the University of Kansas. Cloth, 5% x 8 in., 164 pp. Open Court Publishing Company.

ERE in the compass of one hundred and sixty pages that may be read at two or them sixty. read at two or three sittings without fatigue are set forth the latest comprehensive conclusions of the higher criticism. The author represents the conservative German thought of the Berlin University. His work is an abridgment of an exhaustive technical exposition contained in his Commentary on Genesis. The real value of it is to be found, for the average reader, not in the analyses of the Genesis legends, but in its revelation of the exact methods and general processes of the higher criticism. The ordinary reader, without very much preliminary knowledge of these processes, having read this book would thereafter understand the manner in which modern results have been reached as regards the entire Hexateuch. From this point on, his reliance upon these methods would be graded entirely by his confidence or want of confidence in the scholarship and speculative acumen of the investigator. Professor Gunkel may not be the very best of these investigators, but his methods are those of a school. He shows how the school proceeds. He still more plainly indicates what are its chief general results, especially as to Genesis.

Genesis, according to his conclusions, is entirely legendary or mythical material. It is impossible to reach back to the origin of most of the legends. Some of them were originally myths. More were stories mostly invented to account for existing facts or to answer great recurrent questions, or local disputed questions. How did things begin? The creation stories arose to answer the question. How do men happen to speak different tongues? The Babel story is the answer. Some of the stories were told or sung to explain names. Some were told to explain the location of tribes, the inequality of their territory, the location of their old places of worship. Much of the material was borrowed from more ancient sources and from other peoples. In Genesis very little of it is Israelitish.

The conclusions generally accepted by the higher critics are assumed in this work. Of the three main sources the material of I is itself composite and contains the oldest matter. The work of E was independent entirely of J and somewhat later. Both of them stand, not for individual authors, but for schools of narrators. The material so designated consists of two sets of collections, originally separate works. In the time of the exile the more precise hand of P standing for a priest, or more probably for the Jerusalem priesthood, supplied the framework of chronology, and all the legal and formal material. and reduced the two sets of collections to a partly unitary work (about 500-444 M.C.). Finally the present form, except a few later additions. was given to Genesis by a reductor (R 1 \* 1) in the time of Ezra.

The compass of this book is not great enough to allow the detail of evidence supporting the positions even to be named. Behind the work would have to be placed the researches of tweaty years of the entire school of higher criticism to give to it an entirely convincing character. But no better work could be suggested, perhaps, for the reader who desires to inspect the method and understand the conclusions of this school. It would certainly be insufficient to remove the ingrained traditional view of Genesis, but it would begin a process in any fair mind that would be likely to revolutionize that view in the end. There is so much that is still merely acute speculation, surmise, hypothesis, and interesting guesswork, that until one thinks what valuable agreements have really been reached by this criticism there is the danger that a reader traditionally hostile to the conclusions would cast out such work as utterly untrustworthy. That would be a great mistake. Even these guesses and hypotheses have behind them for the most part a solid foundation of ascertained results, and many of them will prove correct

BOOKER T. WASHINGTON'S antohography, "Up from Slavery," has al-ready become a book of world-wide renown. It appeared in French and German some time ago, and has recently been translated into Hindostanee. Arrangements have also been made through its publishers for publication n Pinland in Pinnish, and a special Spanish edition will be printed in Cuba. A leading article by Th. Bentzon in the Krun des Peux Monder names it as a book of a quality of human interest that will bring it to the front whereever men aspire to know the greatest achievements of their fellows.

# CONVINCING EVIDENCE

From All Over the Country as to the Value of Our Proposition:

# \$10 Secures a \$480 Lot in Greater New York"

A Rughy Residence, Linden Ave.

\*HOUSANDS of the readers of The LITERARY DIGEST have read with great interest our announcements under the above heading, in which we made some remarkable statements regarding the value of property in New York City,

The Rev. Dr. Theo, L. Cuyler, Pastor Emeritus of the Lafayette Avenue Presbyterian Church, Brooklyn, in his interesting address before the Society of Old Brooklynites recently, referred to the time when the Astor House in New York was built, and to the fact that the original John Jacob Astor said that he bought property, but did not sell. This, as every one knows, is the foundation of the tremendous wealth of the Astor family, and the opportunities for profit in New York real estate are to-day infinitely greater than they were in the early times, as we shall be glad to prove to any inquirer.

A REMARKABLE RECORD Since our first general advertising appeared last Fabruary, we have sold 50:00, 900 worth of Brooklys properly to people in oil parts of the world, from Ababka 6 Manila, South Africa.

WHO INVESTIGATED ADDED 30:00:000 TO THERE MOVE AND ADDED ATTIVES. The ADDED ADDED 30:00:000 TO THERE MOVE ADDED A

# CURRENT POETRY. Aubrey de Vere.

Anbrey Thomas de Vere, the poet, died at Curragit Uhase, Limerick, on January 21, 1902 He was but n at the same place lanuary to, 1814, and was the son of Sir Anbrey de Vere. He attended Tringy College, Dublin, and his first poem, "The Waldenses," was published in that He was a prolitic writer in many fields, and lately had contributed much of a journaintic character to the London 7 unes.

The New York Tricune speaks of de Vere as a poet of a past generation, and further says :

"Faithful to old pleaks and hearing a true war rant from the Muse to celebrate them in verse, Aubrey de Vere will be read long after countless reputations of the present day have been shriveled into nothingness."

The same paper considers the following to be de Vere's masternièce :

### Emegra

When from his white chest first he pushed the shining deep that stayed him,

Fair-tressed Europa thought the Bull too gentle to upbraid him ; Her languing face thrown back to those who

apread their hands to chide him, She sang, "We all his trappings wrought; yet ! alone desert side him!

But when her father's towers went down beneath DECEMBER SUPPLE

And the sweet clamor of her mates grew boarse amid sea darges. The simple child her dark eye raised and awe-

struck hand to Heaven, And played of all the gods (but most of Jove) to be forgiven!

Her small foot first the billow brushed-at last her knee it bedded:

Warm felt the waves as lovers' sighs, long parted or late-wedded;

But she her dark eve dim with tears kept fixed, and strove to smother That cry: "My father and my mates! help, Cad-

mus, help, my brother !" Behind, the Sea-gods linked their pomp, showing

to love devotion. And smiles went o'er the purple breadta of loud resounding ocean:

O'erawed, the knowing not the god, she strove that cry to smother "Alas, my father and my mates help, I'admus,

help, my brother!" Hard by old Triton cheered with song the deep

sea wildernesses Far off the Nymphs in myriads rose and mixed

their whispering tresse But Asia's lonely daughter still looked up and strove to smother That cry : "My father and my mates | help, Cad-

mus, help, my brother !" A Pirate's bark to Chios steered-that nomn they marked with terror.

And specters of forgotten sens rose dark o'er

# To Business Men

To Anybody II)ho Duplicates Anything

# The Edison Mimeograph

invented by Thomas A. Edison, will duplicate anything that you can write, typewrite or draw.

Write one copy on a stencil, just as you would on paper - by typewriter or hand. Put the stencil on the machine and print fifty copies per minute, exactly like your copy. An office boy can do it.

To issue 500 circulars on this machine costs 20 cents. To print them costs \$3. To write them all may cost \$10. And the Mimeograph gets them out in 10 minutes.

Every man in business needs it. For many it earns its cost every week. Anyone who writes the same thing to more than ten people needs it. There is no other way to get out circular information so suickly and cheaply.

Please write for our book, which is free.

White House. 'My boy,' said he, 'there is a let-ter I would like to have you look at.' Jayne picked up the letter, and found it was from General Dis. It conveyed the information that several Federal prisoners had escaped from Libby prison with the aid of Abbie Green, a woman famous during the war. The letter also said that as the fact of Abble's assistance was well known, she had been obliged to flee from Richmond, and even then was on her way to Washington on the

flag-of-truce boat. Now, my boy, said the President, 'I don't itnow what I should say to any rascal who would ateal that letter and have a bill passed through Congress to grant \$10,000 to the relief of Abble Green.' Mr. Jayne 'stole the letter,' and the next day both branches of Congress passed the bill to grant \$10,000 to Abbie Green.' The following morning 'Honest Abe' sent for Jayne again. 'I told you I didn't know what I should say,' he said with a twinkle in his eye, 'to the rascal who would steal that letter and bave Congress act on Now, I've made up my mind what to say. You go down to No. - Street, gat Abbie Green, take her down to Chase at the Treasury, and don't you let her go until she gets that money."

### LINCOLN AND HIS BOYS.

It was a frequent custom with Lincoln, this of carrying his children on his shoulders. He rarely went down street that he did not have one of his younger hora mounted on his choulder, while another hung to the tall of hie long coat The antics of the boys with their father, and the species of tyranny they exercised over him, are still subjects of talk in oringfield. Mr. Roland Diller, who was a neighbor of Mr. Lincoln, tells one of the best of the stories. He was called to the door one day by hearing a great noise of children, and there was Mr. Lincoln striding by with the boys, both of whom were wailing aloud. "Why. Mr. Lincoln, what's the matter with the boys?" he esked. " Just what'e the matter with the whole world," Lincoln replied. "I've got three walnuts, and each wants two."

# LINCOLN TO THE JURY

Mr. T. W. S. Kidd says that he once heard a lawyer opposed to Lincoln trying to convince a jury that precedent as superior to law, and that custom made things legal in all cases. When Lincoln arose to answer him he told the jury he would argue his case in the same way. Said het 'Old 'Squire Bagly, from Menard, came into my office and said, 'Lincoln, I want your advice as a lawyer. Has e man whet'e been elected justice of the peace a right to issue a marriage license?" I told him he had not: when the old 'squire threw himself back in his chair very indignantly and said: 'Lincoln, I thought you was a lawyer. Now Bob Thomas and me had a bet on this thing, and we agreed to let you decide; but if this is your opinion I don't want it, for I know a thenderin' sight better, for I have been 'squire now eight years and have done it all the time.

HOW LINCOLN EARNED HIS FIRST DOLLAR "Seward," he said, "did you ever hear how I carned

my first dollar?" "No," said Mr. Sewn

"Well," replied be, "I was about eighteen years of age, and belonged, as you know, to what they called down South the 'scrubs;' people who do not own land and slaves are nobody there; but we had succeeded in raising, chiefly by my labor, sufficient produce, as I thought to justify me in taking it down the river to sell. After much persuasion I had got the consent of my mother to go, end had constructed a flat-boat large enough to take the few barrels of things we had gathered to New Orleans. A steamer was going down the river. We have, you know, no wharves on the Western streams, and the custom was, if passengers were at any of the landings they were to go out in a boat, the steamer stopping and taking them on board. I was contemplating my new boat, and wondering whether I could make it stronger or improve It in any part, when two men with trunks came down to the shore in carriagen, and looking at the different boats, singled out mire, and asked, 'Who owns this?' I answered modestly, 'I do.' 'Will you, said one of them, take us and our trunks out to the eteamer? 'Certainly,' said I: I was very glad to have the chance of earning something, and supposed that each of them would give me a couple of bits. The trunks were put in my boat, the passengers seated themselves on them. and I sculled them out to the steamer. They got on board, and I lifted the trunks and put them on the dock The eteamer was about to put on steam again, when I called out, 'You have forgotten to pay me.' of them took from his pocket a silver half-dollar and threw It on the bottom of the boat. I could scarcely believe my eyes as I picked up the money. You may think it was a very little thing, and in these days it seems to me like a trifig. but it was a most important incident in my life. I could scarcely credit that I, the poor boy, had earned a dollar in less than a day; that by honest work I had earned a dollar. I was a more hopeful and thoughtful boy from that time

This is not an ordinary biography; no dull recital of history confronts you, but on the contrary the real, live, breathing Lincoln is portrayed with such an intensely human insight as an intimate friend of Lincoln might have had. The reader is transported back to every stirring scene of the great American's entire career, and shown the innermost corners of his strong, rugged personality.

IDA M. TARBELL'S NEW AND COMPLETE

### LIFE INCOLN **ABRAHAM**

While it has all the fascination of a great historical novel, every detail of the history is given with thoroughness and accuracy, and more than this, nearly every page presents new facts and side lights on Lincoln's life, hitherto unpublished. This is a leading feature.

### **Exquisitely Made** One of the choicest products of the bookmaker's art.

Binding The volumes are bound in rich red T cloth, titles and designs in gold, gilt tops, silk headbands, etc. 900 pages.

Type, Paper The paper is of unusually choice quality, highly calen-

dered; the type is clear and of ample size, the margins are

**lilustrations** The work is lavishly illustrated with helf-tones, photogravures, frontispieces, etc. gathered from original sources.

In a Box in onion skin paper and en-closed in a tasteful box.

THE LATE CHARLES A. DANA.

ntimately associated with Lincoln as Assistant Secretary of War, selected "The Early Life of Lincoln." the first volume of this work as one of the TEN BOOKS INDISPENSABLE TO EVERY ONE OF AMERICAN OBIGIN.

Features Making this the Greatest Picture of Lincoln " No other life of Lincoln gives us so vivid an impression of the true greatness of the man," - Washington Times,

Wealth of Exclusive Material, Hundreds of cowly Shows The True Lincoln-Mytha Disproved. overed personal letters, over 200 pages of hitherto unpublished speeches, including the celebrated Bloomington ot to be found elsewhere, are now presented here.

Profusion of Interceting Pictures. The intense Produced at Immense Cost and Labor. Miss serional interest is heightened by a profusion of pictures. Tarbell spent five years of labor on this work, traveling urpublished portraits, documents, and scenes in his career from boybood to the White House.

Many popular delusions about Lincoln such as the etory LOST SPRECH," personal documents, anecdotes, etc., away from his own wedding, etc., are disproved. The that his father was only "a poor white," that he ran true Lincoln is depicted.

showing facsimiles of Lincoln's school exercises, hitherto all over the scenes of Lincoln's life, visiting and corresponding with his friends and relatives, and thus compiling an absolutely new and original work.

So written that it is as absorbing as a novel to the youngest readers; so accurate that it enables all to talk with confidence and intelligence on Lincoln and the stirring events of his time.

# Reward of Merit.

# A New Catarrh Cure Secures National Popularity in Less than One Year.

Throughout a great nation of eighty million it is a desperate struggle to secure even a recognition for a new article to say pothing of achieving popular favor. and yet within one year Stuart's Catarrh Tablets, the

re, has met with such success that today it can be found in every drug store throughout the United States and Canada

To be sure a large amount of advertising was nece eary in the first instance to bring the remedy to the attention of the public, but everyone familiar with the subject knows that advertising alone never made any article permanently successful. It must have in addition absolute, undeplable merit, and this the new estarrh cure certainly possesses in a marked degree

Physicians, whn formerly depended upon inhalers. sprays and local washes or ointments, now use Stuart's Catarrh Tablets because, as one of the most prominent stated, these tablets contain in pleasant, convenient form all the really efficient catarrh reme dies, such as red gum, blood root and similar anti-

They contain no cocaine nor opiate, and are given to little children with entire safety and benefit. Dr. J. J. Reltiger, of Covington, Ky., says: "I suffered from entarrb in my head and throat every fall, with stoppage of the nose and irritation in the throat affecting my voice and often extending to the stomach, causing catarrh of the stomach. I bought a fifty cent package of Stuart's Catarrh Tablets at my drugcarried them in my pocket and used them faithfully, and the way in which they cleared my head and throat was certainly remarkable. I had no catarrh last winter and spring and consider myself en-

tirely free from any catarrhal trouble."

Mrs. Jerome Ellison, of Wheeling, W. Va., writes; "I suffered from catarrh nearly my whole life and last winter my two children also suffered from catarrhal colds and sore throat so much they were out of school a large portion of the winter. My brother who was cured of catarrhal deafness by using Stuart's Catarrh Tablets urged me to try them so much I did so and am truly thankful for what they have done for myself and my children. I always keep a box of the tablets in the house and at the first appearance of a cold or sore throat we nip it in the bud and catarrh is no tonger a household affliction with us."

# FOOD WILL DO IT

Made Over a Man of 60.

Food that will put the vigor of life into a man of sizy is worth knowing about. Mr. Chas, E. Allen of 5356 Matter St., Philadelphia, Pa., says, "Five years ago at the age of difty-sine I was advised by a friend to adopt rolled oats for my breakfast diet in the place of white bread. I followed the advice with some benefit, but was still troubled with heart weakness and general debility, requiring medicine from time to time; the bowels were also affected to an extent.

About six months ago while still half sick and very weak I commenced to use Grape-Nuss Breakfast Food and soon noticed an improvement in my general health, with the gradual disapperarance of unfavorable symptoms. Heart publication decreased and a new feeling of vigor manifested itself in various ways. Tonks were no longer needde, boweds became natural, nerves were steady and I secund to have returned, in a great degree, to the vigor of middle age. There has also been a gain in flesh, my weight having increased from 137 to 15 pounds.

You are welcome to use my name if you desire to publish this voluntary testimony."

# The Best Shakespeare

# at Half-Price for a Limited Time

This edition of Shakespeare will interest you. Not only does it excel in accuracy, clearness and convenience of arrangement, but in regard to price, it costs less than half what any other first-class edition costs. The Coupon will bring you a set for examination, and one dollar a month will keep it.

Sets in 13 Handsome Volumes, 7000 pages. Size of Volumes, 8 x 51 Inches

# The New International Edition

This edition of Shakespeare stands based on three centuries of searching criticism. It indicates the high-water mark of Shakespearean scholarship. It contains the famous Cambridge text, which has been for forty years the standard text of Shakespeare. To this text has been added Prefaces; copious Critical Comments taken from the works of great Shakespearean scholars; full Glossaries defining every difficult word; Explanatory and Critical Notes, which make clear every obscure passage. There are over 200 illustrations, many of them being full-page chromatic plates in colors and photogravures on Japan vellum. Included with the set is a complete Life of Shakespeare by Israel Gollancz, with critical estimates of Shakespeare's genius by Walter Bagehot, Leslie Stephen and Thomas Spencer Baynes. Shake-speare's Works are given complete, including the Sonnets and Poems. The volumes are elegantly bound in cloth or half-leather, stamped in gold. A set is a complete Shakespearean library.

# Entire Sets Sent on Approval

The first edition-which was sold at half-price for introductory purposeswas closed out last month, but orders continued to come in by every mail. We felt that we could not disappoint those who sent their orders in good faith expecting to secure a set all the introductory prices, so we have ordered a new edition, which will be sold at half-price, and on the easy payment plan—\$1.00 coson, which will be soid at half-price, and on the easy rayment plan—\$1.00 a month. The new edidin is in every way a splential specimen of mode bookmisting. The special prices are \$22.00 for a set in half seather, prices. You may pay in like payments of \$1.00 a month. The Composition will bring you a set for exammation (express prepaid by us), and find stails.deptor may be returned at our express without costing

FREE We will send free with each set of this edition a complete Topical Index to Stakkespear's plays (forming one volume) and a Plan of Study for each play, containing study questions. The Index Volume is in every way equal to a Concendance, and no Concendance can be purchased for least than Booo. The Method of Study for each play is invaluable to students.

# New Lights on the Scientific Sources of Character and on Character Training

ALL the subtle and occult, as well as the educational and outside agencies that tell upon the development of character, are exhaustively considered in Dr. Alfred T. Schofteld's new book "The Springs of Character," and the tremendous responsibility of all those concerned with character forming is startlingly brought out. Dr. Schoileld's study gives a striking presentaion of the scientific foundations of character and of the principles of character training.

The St. Louis Globe Democrat says: "There is deep fascination in Dr. Schofield's study."

8vo, cloth, index and bibliography. Price. \$1.30, net. Postage, 11c.

FUNK & WAGNALLS COMPANY, Pubs. 30 Lafayette Place, New York.

# Great Thoughts Grandly Spoken "Modern Eloquence

"IN these volumes, the Honorable Thomas B. Reed has," as Secretary of State John Hay well said, "gained the same eminence as editor that he already enjoyed as orator." As the Editorda-Chief he has wrought from metal which he knew. Himself a master among master midds, in daily contact with the makers of our political, literary, commercial and social blatory, he brought is editorial work that surety of judgment born of familiarity, and a complete mastery of its possibilities. Mr. Reed enlisted, as only he could, the substance of men of international frame and splendid resources. The mere physical blace of examining thousands of possible speeches, addresses and lectures was enormous.

sees and actuates was caronious. Besides the Editors and the Committee of Selection, a large number of collaborators were enlisted, at home and abroad, in the task of interviewing great speakers and thinkers in person, and gaining access to unpublished and ordinarily inaccessible records. This necessitated supendous effort and labor, seemingly endless time, and expense unprecedented in the history of book making, save perhaps in such monamental works as the Britannica and Century Dictionary. But this infinite care, and disregard of expense, made Modern Journalism, says, "The choicest set of books in my library." Eloquence, as Colonel McClure, the Nestor of American

# After-Dinner Speeches

(Volumes 1, 11, 111.)

These three volumes of the Library contain the most billion uniquely comprehensive collection of the thoughts and words of post-prandial orators ever published. About the Banquet-Board, no less than in the Forum, the great thoughts of the masters of the world have been given expression.

I, the great thoughts of the masters of the world have sison. By them parties and policies have often been made and unmade. By them also the diners and later the world have been given the inside view of gigantic enterprise, herculean effort, and sublime In periods, scintillant with wit, a achievement. In periods, scintillant with wit, Choate forged new and stronger links in Englis and American unity. The silver-tongued Grady rent the curtain of sectional prejudice, and brought the Puritan and Cavalier into a common, congenial

brotherhood. In these pages living men speak living thoughts in a living tongue. We nit at a banquat-board with a hat of speakers the like of which the world has never seen. As Congressman Landis, of Indiana, says of these volumes: "We behold the galleries radiant with fair women. We hear the shouts, and the air peals with laughter—then comes a pause—a shock—the lightning of wit, and augment and the thunder of applause; men and women rise, sparkling glasses soar—Iodern Eloquence transports us, and 'we are there."

Every speech is reproduced as given, with all the introductory remarks. We have the "applause," the "cheers" and the "laughter"

of the guests.

# Great Addresses

(Volumes VII, VIII, IX.)

These three volumes contain one of the most unique features of this most unique work. The addresses delivered at great celebrations, or under the stimulus of great public interest, are often an

Life;" Cardinal Gibbons" "Spremacy of the Catho-lic Religion," while Cardinal Manning, with his fine, broad view, dis-cusses the "Persecution of the Jews;" Blaine, the idol of a decade cusses the "rersecution of the Jews;" Diame, the idol of a decade in American political life, in one of his greatest moments of Inspiration, gives us his grand delineation of "Garfield, the Man and the Patriot," while a few pages further on is found Rufus Choate's limmortal epic, "On the Death of Daniel Webster." So on—and on -we might go until we had named the major part that is conceded great and worthy in our national literature. Every address is complete. An editorial note gives the time, the place and the circumstance of its delivery.

# Classic and Popular Lectures

(Volumes IV, V, VI.)

T. B. Reed Editor de Chief The lecture platform has been the vantage ground from which masterful men nave moulded the thoughts of their time and prepared for posterity a better, a cleaner, a grander world to live in. In the three volumes of Modern Eloquence devoted to lectures, ng other delights, we travel "Dark Continents" with Stanley,

and listen spellbound to Wendell Phillips teaching us to know the greatest of his race—"Toussaint L'Ouverture." We listen to General Gordon tell us that pathetic story of the "Last Days of the

us that pathetic story of the "Last Days of the Confederacy," and speculate with George M. Searle, and the Confederacy, and speculate with George M. Searle, ambittions and strength and purpose as Edward W. Bok gives us his "Keys to Success," or we take to to heart the bumanity of Robert Collyer's "Clear Gitt." Ingersoll gives us a better appreciation of immortal Shakespeare. In an idle our we recall with Major Pond "Memories of the Lyceum." and have a laugh with Josh Billings on "Milk," or Robert Jones Bur-dett's "Rise and Fall of the Moustache." We glean the wisdom of our time that lies within these pages and hold fellowship with the orators of our mother tongue, without creed or prejudice. Many of the lectures have never before been put into type. Nearly all have the benefit of the author's revision.

# Anecdote, Repartee, Reminiscence

(Volume X.)

This volume stands alone and superb among the ten volumes of the set. Every means which ingenuity could devise, and splendid resources make possible, were exhausted to make this collection absolutely representative of the best in American anecdote, repartee and reminiscence. This volume is compiled from exclusive sources to which only men in the positions of the Editor-

in-Chief and his associates could have access. Here are fine stories for the clergyman, statesman, diplo mat, banker, business man, physician-in fact, for men in all callings and in every walk in life.

Analytical, Subject and Concordance Index

This volume contains, also, a complete analyti-cal subject and concordance index, so that it is possible to refer instantly to any speaker, topic, time or place.

# SPECIAL OFFER.

A large, handsome portfolio, containing 11 sample photo-gravures and chromatic plates and 80 specimen pages of brill-iant After-Dinner Speeches, Lectures, Addresses. Anecdotes, etc., will be sent, free of charge, on request. With this we will also submit a special proposition which easily will place this great work in your possession.

RECEIPT and credit of payment is shown in about two weeks by the date

on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent the weeks prier to the date.

ance, or change of address should be sent two weeks prior to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing must always be given.

PRESENTATION COPIES.—Many persons aubscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

#### TOPICS OF THE DAY.

#### BRITISH, DUTCH, AND BOER INTENTIONS TOWARD EACH OTHER.

WHY did the Netherlands Government make a request of the British which it might have known would be refused? The request was made in a spirit friendly to the Boers; but was it friendly to Great Britain? Why do the Boers keep up the fight? Why does Great Britain insist that the Boers can sue for peace only through Lord Milner, whom they detest above all other British? These are some of the questions that are being asked by the American newspapers. The New York Press speculates on the motives of the Netherlands Government in the following year.

"Peace proposals' is hardly the term for the request, on heal of the Boors, made by the Druch and declined by the British Government. That which was asked was simply that Mr. Kruger and Dr. Leyds should have the social pleasure and politico-military advantage of conferring with Generals. De Wet and Botha under safe conduct from the enemy now in possession of their common country. There was no picige, nor scarcely a suggestion, thus peace proposals would be the result of the grant suggestion, thus peace proposals would be the result of the grant even expected the least abatement by the Boers of their demand for complete independence.

"From this it would scarcely appear that the Dutch Government really loped to promote peace. Probably the most chariment really loped to promote peace. Probably the most charitable conclusion is that it felt called upon to do something to appeace public sentiment in Queen Wilbelmina's domitions, and so made a proffer of a sort of good offices which it felt could not be repudiated by those for whom it acted. But a less friendly critic might remark that it desired to put the British Government at a disadvantage in the forms of international public opinion by approaching it with a form of proposal which it knew was doomed to declination in advance."

Some light is cast on the British and Boer intentions in the following comment by the Baltimore Sun:

"There seems to be no doubt that the British Government intends to exact unconditional surrender from the Boers and to make no terms at all with these gallant men. That is the policy advocated in Parliament by perpenentatives of the Government; that is the spirit which animates the government press. The Boers may indeed be in dire straits, but they have made such a determined resistance to British aggression and are so bent on retaining their judependence that it is possible they may conclude to fight to the last extremity rather than accept Britishs sovereignty. Under Lord Kitchener's proclamation, issued in September last, the Boer leaders, like Steyn and Schalkburger, Botha, De Wet, and Delarey, will be exiled from South Africa as soon as they fall into the hands of their enemies. These men have nothing to lose by continuing the war, while it is possible that the Indefinite prolongation of the conflict may secure them better terms than the British are now willing to offer. Men of this type, who have fought with unsarpassed bravery against overwhelming odds, can not be expected to consider favorably a demand for unconditional surrender."

The New York Times thinks that England ought to make it easy for the Boers to sue for peace, instead of making it hard. It says:

"The Boers in South Africa have already been notified by Mr. Chamberlain that if they want peace they must apply to Lord Milner for it. Now. Lord Milner is particularly detested by the Boers as, in the language of Lonis Botha, "a declared enemy to the Afrikander race." It does seem that even to Mr. Chamberlain his punction might appear one proper to be waived in the loop of securing an otherwise satisfactory peace. But one of the strangest, and to us one of the weakest, points of Lord Rosebery's program was his sustaining this particular contention of the content of the property of the strangest and the summary of the summary

#### A GERMAN THRUST AT ENGLAND'S FRIEND-SHIP FOR US.

THE official declaration of the British Foreign Office in Parliament a few weeks ago that the British Government had "every reason to believe "that "France, Germany, and Russia" were behind Anstria in her intervention scheme in 1898, and that it was defeated by British refusal to join in it, has elicited a counter-deliverance from Germany. Last week the Berlin Kreuz Zeitung published an article understood to be from the pen of Professor Schiemann, of Berlin University, and confirmed by "a high official" in the German Government, declaring that after the collective note of April 7, in which a general hope was expressed that a peaceful solution of the Spanish-American difficulty would be reached, the British ambassador at Washington, Lord Pauncefote, as the "high official" says, "proposed a second collective note, declaring that armed intervention in Cuba would be unjustifiable." This proposal, we are told, was defeated by Germany. The Kreuz Zeitung relates the story as follows:

"When England, April 14, through her ambassador, proposed a new collective note, in which the Powers should declare that Europe regarded America's armed intervention in Cuba as unjustifiable, the other ambasadors telegraphed to their home governments asking for instructions. The step failed through Germany's positive refusal. This gives, as it appears to us, a picture essentially different from the English legend. A fortnight later war was declared.

"Afterward, in June and July, while the United States was making great progress in the Philippines, England actively true to induce the Spaniards' commission in England to ask for peace proposals, for to no Power was the American encroachment in the Pacific more annoying than to England. The above is the

historical connection of events. We hope that, in giving the same, we have thoroughly exposed the absurdity of the English legend,"

The American press do not seem to be greatly concerned about these conflicting claims. The New York Press calls the German story a "bit of historical povel writing," and the New York Times declares that "no American believes it." The London correspondent of the Associated Press says he has" the highest official authority for denying the story." The New York Evening Post, however, thinks the controversy has reached the stage where the statements of "High Officials" and "One who is in a Position to Know" are not enough, and that nothing but official documents will be believed now. The Spanish Foreign Office last week gave out some of its correspondence with its ambassadors in European capitals just before the war, but, as the New York Journal of Commerce says: "The official correspondence made public by Spain sheds very little light on the diplomacy that immediately preceded our war. It sheds so little light that the action of the Spanish Government in giving out the despatches requires some explanation. Spain solicited intervention at all European capitals, but the despatches of the Spanish ambassadors embodying the replies of the various ministers of foreign affairs convey little except civility."

#### PROGRESS OF THE CUBAN TARIFF FIGHT.

THE Washington correspondents seem to agree that the prospect of a reduction of the tariff on Cuban sugar and tobacco is improving, and many of them predict the early emactment of a law providing substantial help for the island. The most notable feature of the contest last week was the firm stand for reciprocity taken by Senator O. H. Platt, of Connecticut. Connecticut is a tobacco-growing State, and as the Philadelphia Press (Rep.) says, the Senator "is a lifelong protectionist whose orthodoxy and fidelity can not be challenged." "He is also one of the half-dosen most influential leaders in the Senate," says tho New York Evening Pest (Ind.), "and in this capacity his support of Cuban reciprocity is of the first importance." The Senator stated his views to the New York Tethune's Washington correspondent as follows:

"I am a protectionist, and have been so mach so that I have been called a partizar. I am as strong a protectionist now as

Another similar declaration that has attracted notice was made last week by the New York Chamber of Commerce at its annual meeting. The attendance of members was large, the papers say, "and the passage of the Cuban report was by a practically unanimous vor, after a free discussion." The resolutions advocate "a substantial reduction of the tariff duties upon Cuban sugar and tobacco" for the purpose of relieving the "distress and suffering" on the island, because such a course is demanded by "every consideration of honorable dealing," and because it will "not only have most beneficial results in improving coaditions in Cuba, but will also advance the commercial interests of the United States."

On the other side the Honoluln Star says:

"While it may seem as if the United States owed something to Cuba, as a fact she has done eaough. An immense amount of blood and treasure has been poured forth to free Cuba from the Spanish yoke. There is certainly no reason upon earth why we should throw down our tariff bars to the manifest injury of our own industries in order to put money into the pocked or greedy Cabans and still greedier speculators, Jew and Gentiles from various lands, who have looked upon the President's message as a certain harbiager of a golden harvest from a cheap barvain.

"As far as the interests of Ilawaii are conceraed they are diametrically opposed not only to free Cuban sugar but to any modification of the tariff in favor of Cuba. We have been passing through a serious crisis, and are now in a fair way of weathering our storm, but cheap Cuban sugar would mean a very serious blow to us. What attitude our delegate in Congress may take upon this question no one knows, but as it sixilal to the interests of the Territory that Cuban cheap sugar should be opposed, judging from previous experience Delegate Wilcox will be advocating free Cuban sugar, as he has been advocating free leprosy from every State in the Unio."

CURA owes a great deal to America, and with characteristic thrift America is preparing to collect.—The Detroit News.

#### REFLECTIONS ON ROYAL "FLUMMERY."

PRINCE HENRY'S coming usefu, the appointment of our cumbassy to King Edward's coronation, and the report that Miss Alice Roosevelt will attend the coronation and be treated like a princess, have stirred up some picturesque remarks in a few of the American papers on the propriety of American "Kotowing" to royalty. "The republic of the United States," says the Washington Post, "noght to hold its dignity too high to perfect the Machington Post, "noght to hold its dignity too high to perfect the Machington Post," noght to hold its dignity too high to perfect the Machington Post, "noght to hold its dignity too high to perfect the Machington Post, "noght to hold its dignity too high to perfect the Machington Post," noght to hold its dignity too high to perfect the Machington Post, "noght to hold its dignity too high to perfect the Machington Post, "noght to hold its dignity too high to perfect the Machington Post," noght to hold its dignity too high to perfect the Machington Post, "noght to hold its dignity too high to perfect the Machington Post," noght to hold its dignity too high to perfect the Machington Post, "noght to hold its dignity too high to perfect the Machington Post, "noght to hold its dignity too high to perfect the Machington Post," noght the Machington Post, "noght the Machington Post," noght the Machington Post, "noght the Machington Post," noght the Machington Post, "noght the Machington Post, "noght the Machington Post," noght the Machington Post, "noght the Machington Post, "noght the Machington Post, "noght the Machington Post, "noght the Machington Post," noght the Machington Post, "noght the Machington Post, "noght the Machington Post," noght the Machington Post, "noght the Machington Post,

FAUGH!

- The Denver News.

mit any element of its citizenship to make a holy show of itself simply because a man or woman of royal descent is going to visit our shores." "The fuss and feathers about the arrangements for the Prince have been nauscating to right-minded Americans," declares the Philadelphia Times, and it goes on to say.

"When these funny busybodies make so much sir over the coming of a person of the royal blood, how can we expect even the royalists themselves not to smile at our democratic boasts and republican pretensions? In reality the visit of Prince Henry to Washington has no more importance in itself than the visit of a President's brother to Berlin. We recall that Almer McKinley went to London when his brother was President, but we failed found the newspapers giving more than a few lines to the event of the property of the property of the property of the Britons crowded to great him, and royality was not at the dock when he carried his own satched down the plants."

The Indianapolis Journal and the Washington Tomes remark that Prince Henry can see at home all the military and naval displays, social functions, and brilliant ecremonial that he cares for, and that he would probably get more pleasure and profit from a study of our people in their daily pursuits. The evening of opera to be given in the Prince's honor in New York gave rise to a discussion that has provoked no little comment. The committee in charge of the affair proposed to reserve five of the parterre boxes in the center of the horseshes for the royal party, but were met by the objection of one of the owners of the boxes, who refused to given ph its box suless given one equally a segod. He expressed his views in a newspaper interview in the following language:

"The whole matter of a royal lox is a neceo of snobbishness. It is contrary to the principles of democracy. The President of the United States does not have a royal box when he goes to the opera, but sits in an ordinary box just as the rest of the people in the theater do. I would not object to giving up my box for any reasonable purpose. But this plan is merely to entertain a snip of royalty, and the committee halo no right to go ahead and say they were going to use our boxes before asking our permission."

Several newspapers indorse these sentiments. The Hartford

Times, for instance, thinks that "there is probably no harm in having such a reminder given to the New York emertainers of Prince Henry that democracy is going to continue to exist in this part of the world for several years to come." The Philaderlian North American, too, believes that many Americans will agree with these views, and it calls the demonstration that New York is preparing for the Prince "sheef flusheyism and intolerable foollshness." The opera rumpus has been settled by giving the objecting box-owner another one just as good.

It is in the same vein that a number of newspapers receive the reports that the Prince is bringing a rifle to the President as a gift from the Kaiser. Says the Salt Lake Heratd:

"Nobody in this country is insane enough to believe it would be possible to bribe our Chief Magistrate by the costlest of gifts. The Emperor of Germany hasn't enough money in all his dominious to make Theodore Rossevelt awere in hair's broadth from the course he thinks is right. It is the spirit of the act, therefore, rather than the net itself, which is at variance with our republican ideas and ideas.

"It would be just as improper for a President to accept a valuable gift from a trust magnate as to accept it from a foreign ruler. He has no right to become entangled with any individual or any nation who may at some future time want favors at the hands of the country. The good feetings now existing between the United States and Germany has no need for accentuation by gifts of whatever character. The visit of Prince Henry is sufficient evidence of the entente contailer. And besides, as the man said when he was enumerating his reasons for not killing a gentleman against whom he had a guidge: 'It's agin the law."

The newspapers which we quoted a few weeks ago as objecting to the special American embassy to the coronation have been still further aroused by a report from Washington, unofficial and unconfirmed, that Miss Alice Roosevelt will attend the coronation ceremonies, and will "rank with the princesses of the blood." She will "wear a tobe of royal purple," so goes the report, and

AMONO THE ENTENDAINMENTS TO BE GIVEN BY NEW YORK FOR PRINCE
HENRY WILL BE A BUSINESS MEN'S LUNCH,

— The Indianapolis News,

"will be distinguished from the peeresses by additional bands of a proceeding would be "on transported thinks that such a proceeding would be "contrary to our sense of republican propriety," and The Irish Hurdt declares that the President under the Arman and the Arman

ward's anachronistic medieval circus parade." The Denver Times discredits the report, and says. "We do not think it would for a moment be tolerated by the President's good sense and robust Americanism."

A glimpse of the problems that are perturbing the minds of those who have charge of the coronation ecremonial is afforded by the London correspondent of the New York Tribune. He says, in a cable letter, that the preparations are "fraught with controversy," but that "it has been difficult to interest the King in the precedents relating to archaic religious forms, since he is preoccupied with the ceremonal side of a splendid court function unexamided for stateliness." The correspondent gives on to say.

"Several points have been decided. A communion office will be included in the coronation service, as in Queen Victorial's time. The anoisiting of the King and Queen will also take place. The King will wear a lines shirt, and over it one corresponding to the following the place of Queen victorial in modifying this portion of the ritual. Queen ellisabeth was the last monatch to be anoisited with other shares as the last monatch to be anoisited with other chrism, the latter fluid consisting of three perts—oil, cream, and balsam—each having a symbolic significance in the ancient, coronation ritual. The use of cirism as well as oil is strongly advocated by the extreme High Church men, but the matter has been settled, altho the King is reported to favor the Eluzabethan method.

"Another controversial question relates to the Archbishop of Canterbury's costume. Medieval precedent requires him to wear a miter. Archbishop Temple strongly opposed the use of the miter, and can not be convinced that it is necessary to do so, The Archbishop is taking a keen interest in all details of the ceremony, and is closely associated with the Bishop of Winchester, Earl Beauchamp, the Duke of Norfolk. and Sir Arthur Ellis in arranging a precise order of service, subject to the King's approval."

#### THE TRANSATLANTIC GRAIN POOL.

THE rumors that have been in the air for some time of the merging of the transatlantle steamship lines into a great combination, or trust, seem to have been justified to this extent, that all of the principal lines plying between the United States and England have agreed to maintain a certain schedule of grain freights. The schedule is said by grain-brokers in New York who have been interviewed by the daily papers to be a fair average of the rates paid during the past year; and if the lines hold to the agreement, it is believed that the stability in rates will prove beneficial to all who raise and handle grain, except the speculators. Says the New York Evening Post:

'It is quite incorrect to describe the raising of transatlantic freights, decided on by the companies vesterday, as the formation of a steamship trust. It is no more that than the restoration of rates by certain railways, two years ago, was the organization of a railway trust. The truth of the ocean-freight matter is that charges during the past year have actually gone below the limit of profit to a properly organized and properly managed steamship line. Tangible instances of this fact are not wanting. There is a well-authenticated case of a grain-shipper who found, last autumn, on the arrival of his American wheat at Bremen. that storage charges were very high, and who in consequence actually persuaded the ship-owners to carry the same cargo back from Bremen to New York, and back to Bremen again-all for less than the German storage charges for the period would have been. There have been other cases where as much as \$18,000 was paid as the price of canceling a contract for ocean freight room, entered upon by a shipper several months beforehand. Such instances prove the general truth. . . . . .

"The cause of last year's collapse in ocean freight rates was plain enough to every one. Along with the wast increase in the foreign trade of every important nation, during the period from 1896 to 1900, ship-building on an enormous scale had been in progress. Floating bertli-room, on the Atlantic particularly, reached proportions never paralleled in the bistory of the work In 1911 came a sudden and heavy shrinkage in the outside trade of every commercial state, not the least loss of all being the virtual disappearance of American corn, as a result of the harvest failure. From this point of view the decline in rates was method the outcome of the law of demand and supply. It is on those lines, in the long run, that the problem must be settled."

# SECRET OF THE AMERICAN WORKMAN'S SUPERIORITY.

THOMAS J. FENT'ON, a laboring man, attributes the superrority of the American workman to the rhythmic way of working which he calls "gail," rather than to trade-union restrictions in England. Writing in The Union Boost and Shore Worker (Boston). he saws:

"The branches of labor have been, in some instances, divided by a process of natural selection in a way to give a workman a steady routine of motions which are almost identically the same on each article which goes through his hands. When the movements necessary to perform his part form a series, every movement of which is in accord, they become rhythmic. An immense amount of jar and friction to the body is thus saved. Notice a rapid workman whose work is mechanical-he is gently swaving backward and forward or from side to side like a pendulum. He is, as it were, beating time for himself, and each of his movements comes in its proper place in the measure. His movements have a graceful, easy swing. It is 'clockwork.' His body has become accustomed to the rhythm; its motions have become more accurate; and the speed accelerates without effort on his part. He has become almost an automaton-almost unconscious that he is working. His mind wanders to other things, and yet he is turning out as much work as if he were carefully using his brain to direct his movements.

"If anything be added to his work which necessitates a new movement not in accord with his other ones, he loses his speed to no slight existin, and if a number of such motions be added, he will become a very slow workman. If workers can be made slow in this manner, they can be made rapid by pursuing the opposite course—by climinating, as far as possible, motions which hinder the acquirement of gait.

"This points the way to a scientific subdivision of labor to supersede the present more or less haphazard method."

Where "gait" is highly developed, as in the New England States, the foreign workmen have become equal in the competition; and the manufacturers in the Western part of the United States, believing that the New England worker's superior capacity in certain industries is due to superior skill, have brought Eastern workmen to the West to teach their quick way of working to the Western mechanics; but the New Englander has been found not so rapid as at home. The reason lies in the factory methods instead of in the men. The writer says in conclusion:

"The saving to the world which could be accomplished by using deliberately, instead of it haphazard, methods of dividing labor which allow the acquiring of 'gait,' would be as great as that made by some of our greatest labor-saving devices, since such methods could be applied to all kinds of mechanical labor, Machinery is being introduced to a large extent in countries which formerly made but slight use of it, but is often of small value in these countries because of the difficulty of securing rapid machine operators. 'Gnit' is the secret of rapid machine running, and, as more mechinery is introduced, and labor becomes still more subdivided, it will become a greater and greater factor in production. As competition becomes keener, and the nations become more equal in the use of motor power and machinery, it may decide many an industrial battle.'

<sup>&</sup>quot;HAXT you got anything to may?" they queried after adjusting the know under the gentleman hores-their e.a. "Yer." he replied, costly, "I have." Well, we will give you just five minutes, said the leader, taking out his watch. "What I want to say is this? began the lift-faced wretch, caimly?" the includes the think that that thop made by Schley had a strategial may be a supplied to the strategial of the strategial pulled. "The Nyracus Hersda" very of lega; he most best it left backs and pulled. "The Nyracus Hersda".

#### MR. SHEPARD TELLS WHY HE LOST.

E DWARD M. SHEPARD, the defeated Democratic candidate for mayor of Greater New York, attributes his defeat chiefly to Mr. Devery, the former deputy-commissioner of police, and Mr. Jerome, the present district-attorney of Manhattan and the Bronx. But for the appointments of Michael C. Murphy as police commissioner and William T. Devery as his first deputy, we are told, the mayoralty election of 1901 would have ended differently. Writing in The Atlantic Monthly (February), Mr. Shepard, after consuming considerable space in explaining his position four years ago and that held by him in the recent campaign 691%

"Whatever may have been the merits or demerits of Chief Devery's former career as captain, inspector, and superintendent of police under the bipartizan board, or of the public sentiment that put him on the defensive from the outset, it is certain that the power wielded by him in the Borough of Manhattan, as practical head of police during the few months before election in 1001, aroused against himself, and, what was far more serious, against the party which, whether rightly or wrongly, was held responsible for his incumbency, an enormous and intense public feeling. With singular fatuity, under skilful goading by the press, he indulged, until the eye of the election, in crude utterances which strengthened the impression of his abuses and oppressions, His very

EDWARD M SHEDARD Defeated Tammany Candidate for Mayor,

Mr. lerome:

nunciation which came from the press of the city was started by Bishop Potter, who said that "nowhere on carth " did there "exist such a situation as defiles

and dishonors New York City." Then followed the committee of tifteen, which, according to Mr. Shepard, "did valuable service by keeping the

energy - that most useful single quality, after honesty,

in the hend of a po-

lice force - seemed to possess a baleful

fury, exquisitely dis-

turbing to every person intelligently

concerned for Dem-

The flood of de-

ocratic success."

and his sensational raids and speeches. The promise of a firm and ppright administration made by the Democratic candidate, we are told, roused the Democratic majority, who thought that if the Democratic party was going to give reform, it would be a mistake to defeat the party. Toward the end of the campaign, however, this tendency was reversed. "This was the work of Judge Jerome," says Mr. Shepard, "who was the candidate for the important office of prosecuting attor-

ney in the boroughs of Manhattan and the Bronx." He says of

moral issue before the community." Lastly came Justice Jerome

"At the last he became the hero or Prince Rupert of the campaign. Sounding the single note of a corrupt alliance between crime and the police force under the Democratic administration, he addressed his appeal to the simplest and strongest sense of morality. Better than any one else he adopted the text sternly given by Bishop Potter the year before. In effective, often rude, but often, also, most impressive manner, he produced the very deepest impression of his own truth-telling sincerity and utter conrage. He was followed and listened to as was no other candidate. He had the burning scal of a true crusader, and to that were forgiven what were deemed mere faults of taste. Near the end of the struggle his speeches became the dominant feature. Until then it was, during the latter half of the campaign, be-

WILLIAM & DEVERY

lieved by most distinterested judges that the enormous advantages with which the Fusion had begun had been overcome, and that the Democratic candidate for mayor would be chosen by a narrow majority."

#### HOW SOME KANSAS FARMERS DEFEATED A TRUST.

AT about the same time that Mr. Shaffer and the Amalgamated Association were making their ill-fated attempt to crush the steel trust, a few farmers who lived in Solomon, Kansas, were trying to do a similar service for a grain-buyers' trust in that State, and with better success. The elevator-owners of Kansas, worried by the competition of the "track buyers," who owned no elevators, and by the competition among themselves, and with the purpose of correcting evils incident to the business, formed a state association. This association soon became nowerful enough, by its influence with the commission men in the cities and with the railroads, to shut out the "track buyers." and monopolize the business of grain huying. The farmers could not even ship their grain direct to firms in the cities. Mr. C. H. Matson, who tells about it in The Keview of Reviews, says: "If, by special effort, they secured cars, they discovered that when the grain reached Kansas City no commission firm would receive it until it had first sold to a local dealer, for fear of a boycott by the Grain-Dealers' Association. The farmer had absolutely no alternative except to sell his wheat to a local buyer or keep it in his bins. The profits made by the so-called trust dealers were onormous. It is related that one western Kansas buyer made a net profit of \$1,500 on twenty carloads of wheat in three weeks. and he had an investment of only \$1,000."

Soon after the association got to running nicely, however, several grain syndicates began to do business in Kansas, and they found that the trust formed by the elevator men was just what they wanted, so they bought out or forced out the various local dealers until they controlled the situation, and "some of the first to suffer from the encroachments of the syndicates were men who had been active in the organization of the State Grain-Dealers' Association." The farmers sought relief from the logislature in 1901, but without result, and in the spring a state convention of grain-growers was called to consider measures for fighting the trust. The convention appointed committees and passed resolutions, but nothing adequate to meet the situation was done.

In the little town of Solomon, however, the farmers proved that the place had been well named. Mr. Matson says:

"The wheat market at Solomon in 1900 was controlled by three syndicates, one on each line of railway running through the town. An independent dealer who tried to do business in a form delevator was forced to the wall. When there was not forced petition, the syndicates paid 12 cents below the Kanasa Cityten price. The normal price was to cents below it is estimated that the excess profits made by the syndicates off the farmers of that one locality, last veri, reached \$15,000.

"The farmers who marketest grain at Solomon organized a coperative shipping association, with a capital stock of \$3,90, divided into shares of \$12,50 cach. No member could own more than sixteen shares, and the majority held only one share each. No stockholder was allowed more than one vote in meetings of the association, to matter how many shares held. This was to prevent any intrivial or corporation from securing a controltrary to its original purposes. An experienced grain-duyer was employed on a salary as manager of the business, an elevator was leased, and on June 15, at the beginning of the lartevest of

190), the elevator was opened for business.

"Under the by-laws of the absociation, every member is required to sell his wheat to the farmers' association, but a provision is inserted whereby he may dispose of it outside of the association treasury a rebate of one cent a busiled on all so sold. This provision is regarded at the bulwark of the association, and prevents the syndicate from foreign et out of business.

"Within two months after the association had opened its elevator, it had handled over 100,000 bushels of wheat, paying its members from seven to nine cents below the Kansas City price, although the normal price was to cents below, while the syndicate price was 14 cents below, a clear gain to the farmers of from five to seven cents a bushel. As a result, the syndicate received very little grain, and kept its elevators running at a loss. Soon after the farmers' elevator opened, one of the syndicates ordered the price advanced to a point that would make the farmers dissatisfied with what they were receiving at their own elevator and tempt them to bring their grain to the syndicate, thus keeping the farmers' elevator from getting any grain, which, under ordinary circumstances, would force it out of business. The syndicates had been paying 48 cents a bushel, but this one syndicate advanced the price to 55 cents, while the farmers' elevator was paying 52 cents. Instead of attempting to meet this advance, the manager of the formers' elevator simply weighed the wheat for the farmers as fast as they brought it in, and then sent it to the syndicate elevator to be sold for 55 cents a bushel. The farmer then returned to his own elevator and paid in one cent a bushel of what he had received, thereby netting 54 cents, considerably more than he would have received had it not been for the competition caused by the farmers' elevator. The one cent a bushel received from this source not only paid the expenses of the farmers' elevator, but gave it a profit besides, so that the syndicate, in addition to doing business itself at a loss, actually paid the expenses of, and a profit to, the very institution it was endeavoring to destroy. The attempt was soon given up, and at the end of three weeks the syndicate had locked its elevator and gone out of business at Solomon,"

The Solomon association, victorious over the trust, did not stop with that. Farmers from other towns began bringing their wheat to the Solomon elevator, till the association was handling wheat for farmers in six counties, and Solomon became an important grain-shipping point. Then the association decided that the commission men in the cities, with their grain exchanges and gambling in futures, were superfluous, so the association worked up a direct trade with the mills, saving the middleman's profits and realizing a high price by conscientious care in keeping the grade of the wheat up to representation. The association has also completed arrangements by which it will slop much of its wheat to cooperative societies in Germany direct, saving middlemen's profits all along the route and chiminating "all board of trade speculation and manipulation from the market." The State Association of Grain-Growers will try to carry out the Solomon plan on a large scale, but, says Mr. Matson, "past experience seems to indicate " that the farmers "are far too numerous to be bound together in an effective organization of large proportions."

# NET RESULTS OF WOMAN-SUFFRAGE IN COLORADO.

THOMAS MOORE expressed the belief many years ago that "Disguise our bondage as we will." The woman, woman rules us still," and it was nearly ten years ago that the men of Colorado voted to throw off the disguise and to give her the ball-to. The sensational predictions made by both sides in the suffage controversy have now been tested by time, and it is found that both were wrong, "for the ballot in the hands of woman has neither unsexed her, nor regenerated the world." That is the conclusion reached by Mr. William Maeled Raine, who writes an article in The Chantanguan on woman-suffage in Colorado. He savs

"It has not regenerated society nor abolished political corruption. It has not even prevented bloodshed at the polls and made the election of had men impossible. The time-serving politician and the ward-better have not become ineligible for public preferment, nor has there been in any way a tremendous influence for good brought to bear upon the electorate. As a short cut to the millennium woman-smffrage may be counted out as a failure, for even upon moral questions the line of political cleavage in the woman vote is as decided as among men. In point of fact the skip of state amorent to sail on in much the same way as before."

The problem presented to the Colorado politician is not an easy one, for the woman with a ballot in her hand seems to be as "uncertain, coy, and hard to please" as one without. A diagram of a ward politician's maneuvers in his efforts to eatch the "lady vote" would not lack interest. Mr. Raine says on this point.

"It is the testimouy of political bosses that the woman vote is more of an uncertain quantity than that of the men, that it is more largely controlled by the emotions, and that it can not be depended upon so surely along party listes. They are agreed, too, that the vote of women in conventions is more easily manipulated than the vote of men, and that this is due not so much to inexperience as to feminine vanity; that generally speaking the women are more anxious to determine the right, and less . able to do so, not so much by reason of inexperience as on account of an inherent fundamental difficulty of sex. The actual party workers are not generally the best classes of women in the . community. Like the men, they are in politics for what they can get out of it. This was, of course, to be expected, and simply parallels the experience of our political conditions everywhere. Women of a certain type are in politics, just as men of the same type, for their own personal advancement."

But considerable positive good has resulted since woman entered the political arena.

On the whole, the private character of office-seckers has been of a higher type than before, owing to the close scrutiny of the Civic Federation and other women's organisations, which have induced conventions to besitate in nominating a man of pronounced immorality or unworthiness. The emphatic reluthe given at the last election to a very befiliant but profligate politician should make clear to party managers the inexpediency of such nomination.

"The newly moused interest of women in civic affairs has manifested itself in other ways, in the grenter cleanliness of streets, in the city park improvements, and especially in the care, ventilation, and artistic decoration of school buildings, The women members of the various state boards have done good work in furthering the interests of their charges. This has been notably true in those boards relating to the care of the criminal and panper classes, manifesting itself in the more efficient management of the female wards of the State and in the improved conditions of the state institutions generally. The Industrial Home for Girls is a shinling example of this. It would seem not only the part of justice, but also of wisdom, to give women a fair representation on the governing boards of those institutions in which they have naturally a special interest, such as charitable and reformatory institutions for gorls, women, and boys, public schools, and coeducational state universities. The development of the girl both in early life, and later during the four impresisonable college years, can hardly be secured along the best lines escured along the best lines escured along the best lines escured along the direction of their lives entirely in the lands of their lives entirely in the lands of the lines of the lines

"The fear that woman would flood the public offices, or would take in any way an undue part in puble life, has not been realized in Colorado. Since the political enfranchisement of women there have usually been three members of that sex in the Colorado legislature, but at the present time, owing to a mistake of othe nominating conventions, there is but one. The only demonstrate on the state ticket conceded to a woman is that of superintendent of public instruction."

Chicago Anarchists and Prince Henry,—In an artiele in our columns two weeks ago Free Swiety (Chicago) was coupled with Frethett (New York) as entertaining feelings hostile to Prince Henry. A letter from Mr. A. Isaak, Sr., the editor of Free Swiety, assures us that this is a mistake. He says:

"Had the accusation appeared in any other publication, we would have passed it without notice; but The LITERARY DIGEST

CHICAGO ANARCHISTS GEITING READY FOR THE PRINCE, AS IMAGINED BY THE DES MOINES Leader.

is usually so fair and accurate that we feel sure you have done us an injustice quite unintentionally, and take this occasion to correct your error.

"We will add that we, in common with the Anarchists generally in this city, are utterly indifferent to the subject of the Prince's proposed visit."

White Illiteracy in the South,—Some of the Southern papers show considerable feeling over the large number of white illiterates revealed by the census reports. About twenty-one per cent, of the population are enrolled in the common schools, a much larger percentage than the North Atlantic States can show; but the proportion of illiterates is nevertheless discouragingly high. The Atlanta Continuous saves.

"There is no more hamiliating fact that an intelligent Southern man has to face than thus, that among the white people of the South we have as many illuterate men over twenty-one years of age as we had fifty-two years ago, when the census of 1850 was taken!

"Make every allowance that may please on account of the Civil War and its consequent impovershiment of our people, and yet this depressing fact is not explicable on any grounds creditable to the white people of the South. To say that we have not had at least within the thirty years of our public-school enter-

prises since 1870, opportunity and means to improve the educational status of our white people is to claim an excuse that agnores facts and outrages common sense.

"This ignorance of reading and writing, the two primary, exessions of the automatic either, to which we now refer, exists among the white men of the South who have come to full age, to citizenship, and all its privileges, since the Cotton Exposition was held in Atlanta in 1851. These figures we write about do niculate children or negroes. They speak their condemnation alone upon the growness) somet of knothers men, the ability tores interests of our civilization and society depend.

"It is useless to parale figures showing how much we have spent on schools, how many schools we lave, and how many new fasts and tiddlesticks we have imported into them from the hotleds of Boxton 'cuichalt' "the fact remains that in proportion to our white adult male population in the South we have as many men who ean not read and write as we had fifty years ago. That is a mean-looking, measly fact that can not be wiped off the

"Our sister States of the Sonth may deal with this deplorable situation as they may elect, but surely it is time for Georgia to get down squarely to the work of correcting our educational system in a way that will work a continuous reduction and practical disappearance of this larve volume of illieracy.

"We need to go down to bed-rock in this matter in Georgia and sacrifice much in the lines of ornamental instruction for the great end of wiping from the rolls of our white citizenship the stigma of abnormal illiteracy that now degrades it."

#### LETTERS AND ART.

#### DOES MUSIC INCITE TO CRIME?

THE view is generally taken that music is a refining influence in society and that a wider musical appreciation would be conducive to higher morality. At least one famous novel, however, -Tolstoy's "Kreutzer Sonata"-is based upon the opposite assumption, and it has often been maintained that the morals of musicians are lower, rather than higher, than those of the rest of the community. Mr. Henry W. Stratton, a writer in The Arena (February), admits that "many criminals are five musicians," and proceeds to a consideration of the causes of this anomaly. There is one class of criminals he says, whose knowledge of music extends no further than the popular songs of the day, and whose associations with such songs have always been of a questionable character. It is not difficult to analyze the psychology of such, for they "absorb only the sensuous quality of the music and cannot really be morally improved by it, because the quality does not contain the necessary musical ingredients to lift them to a higher plane of entotion." Mr. Stratton

"It cases where the melody is good and would of itself awaker refining impulses, it frequently happens that the words with which it is connected produce precisely opposite effects; indeed, the words of a song are much to blame for the demoralising indusence of it. Again, popular song rhythms are calculated to spur only the lower emotions. Is a tune catchy? Its charm lies largely in its rhythm. Take the songs composed in rag-time; the synopositions that form their principal feature give rise; to jerky rhythms, and these act upon the nervous system of the listener at unexpected and nunatural parts of the measure. The result is that the entire being is thrown into a succession of unbalably into a control one of the measure. The result is that the entire being is thrown into a succession of the high control of the measure. The result is that the entire being is thrown into a succession of the high control of the death of the control of the high control of

Turning to a consideration of the character of the world's most skilful musicians and singers, Mr. Stratton inquires: "Why has their art done so little to build up their moral fiber and make them true men and women?" He replies:

"Broadly speaking, the same cames operate here as in the first class considered. Quality and rhythm still play an important part, but their influence is more subtle. The darlings of society have learned to be musically voluptions. Acquaited with all the luxuries of sound, susceptible to every gradation of tone, every modulation from key to key, and every possible rhythmic effect, they yield without question to the sway of all-kinds of music and are consequently unable to resist the nervating tendencies of their art: they are simply mastered by musical sensation."

The writer gives some specific illustrations of the "enervating" tendencies of music. "One that may be mentioned," he says, as producing a deleterious effect upon the moral nature is that voluptuous slide from one tone to another called portamento- a slide to which singers and violinists are much addicted. It is the acme of sonorous luxury, induces languor, and suggests to the mind a relapse from moral discipline," Another source of enervation is the inordinate desire for bizarre effects, whether accomplished by raising the pltch for the sake of brilliancy, or by introducing all kinds of "luxurious intricacy." "The musician," declares Mr. Stratton, "literally becomes the music he produces, and grows fastidiously lavish in his tastes and habits. He loses his moral poise and sinks into the musical vortex where crime waits to suck him down and complete his moral disintegration." Still another source of weakness is the excessive use in Instrumental works of chromatic passages, both melodic and harmonic. On this point Mr. Stratton says:

"The history of chromatics shows that when first employed among the Egyptians, during the twenty-first and tweuty-second

dynasties, their influence was decidedly detrimental to the morals of the people. At that time the treble finte was invented, and because of its chromatic capabilities it superseded the harp and lyre in popular favor. The effeminacy and licentiousness of the age were reflected in its music, and the orgies conducted at the then capital of Egypt, Bubastis, were celebrated by hundreds of thousands to the accompaniment of myriads of these flutes. After the twenty-sixth dynasty, under the Ptolemies, the music of Egypt reached its lowest ebb. Every man in Alexandria was a skilled flute-player, and even the kings were very proficient upon this amorous instrument. It is a singular coincidence that, with the change from the diatonic harp to the chromatic flute, the dissolute days of Egypt began. Certain it is that music relaxes its strict and rigid character when chromatically treated, and this laxity when carried to excess tends to weaken moral sinew."

But while certain forms of music exert an enervating and immoral influence, Mr. Stratton holds it to be equally true that other kinds of music help to strengthen the moral sense. In order to serve this end, however, there must be "a moral rectitude in the relations of musical tones." Such moral rectitude, declares the writer, "exists in folk-songs, and in all simply constructed melodies whose tone intervals are chiefly diatonic." He concludes:

"The perception of moral truth can come through no broader channel tian that of music; for, as Browning says, 'there', channel tian that of music; for, as Browning says, 'there', it is the soul's armor; it is mail of sound, and tones are the links. He who is wrapt in this flexible but impenetrable envelope of sound may defy all the pressures of being. I say 'wrapt,' because, in our to be proof against those immoral tendencies which assail us on every side, one must wear music next to the very vitals—must not like a garment, and let the tones sink around and clasp the life-centers in a soul-tight embrace."

#### LOWELL'S APPRECIATION OF HOWELLS.

FROM the very opening of William Dean Howells's literary career Lowell's critical sense enabled him to foretell correctly the high rank to be attained by his young friend, and there is no doubt that Lowell's suggestive and stimulating criticism has been a considerable factor in Howells's development. In The Methodist Review (New York, January) Viola Price Allen throws some new light on the relations existing between these two famous men of letters, her excerpts from Lowell's letters being of especial interest at this time on account of the recent publication of Mr. Scudder's biography of Lowell. As early as 1860 Howells received the following advice from his more experienced friend: "Don't print too much and too soon: don't get married in a hurry; read what will make you think, not dream; hold yourself dear, and more power to your elbow! God bless you!" Then followed a postscript: "A man may have ever so much in him, but ever so much depends on how he gets it out." The same month Lowell sent a letter of introduction to Hawthorne, in which Howells is referred to as a fine young fellow who had written several poems in The Atlantic, and this commendation was added: "If my judgment is good for anything, this youth has more in him than any of our younger fellows in the way of rime." In December of the same year Lowell wrote Howells a letter full of warm-hearted encouragement, saying that he thought his poem "really fine," and was glad he was making himself "scarce"

"That is not only wise, but worfdly-wise too. It gave me agreat pleasure to make your acquaintance, and to find you a man of sense as well as genius—a rare thing, especially in one so young. Keep fast hold of the one, for it is the clue that will bring you to the door that will open only to the magic password of the other."

The high-water mark of Lowell's praise is found in a letter of September, 1869:

"I have a great mind (so strong is the devil in me, despite my

years) to give you an awful pang by advising you not to print your essay. It would be a most refined malice, and pure jealousy, after all. I find it delightful, full of those delicate touches which the elect pause over and the multitude find out by and by -the test of good writing and the warrant of a reputation worth having. As Gray said of the remances of Crébillon fils. I should like to be on a sofa all day long and read such essays. You know I would not flatter Neptone for his trident-as indeed who would, that did not toast his own bread?-but what you write gives me a real pleasure, as it ought; for I have always prized in you the real element, not merely in your thought, but in your way of putting it. And one of these days, my boy, you will give us a little volume that we will set on our shelves, with James Howell on one side of him and Charles Lamb on the other -not to keep him warm, but for the pleasure they will take in rubbing shoulders with him. What do you say to that? It's true, and I hope it will please you to read it as much as it does me to write it. Nobody comes near you in your own bue. Your Madonna would make the fortune of any essay-or that pathetic bit there in the graveyard-or your shop of decayed gentilitiesor fifty other things. I do not speak of the fone, of the light here and shade there that tickle me.

Lowell's last letter to Howells was written in much the same spirit, and contains the following reference to a criticism of his

"How could you doubt that I should like anything you wroteeven about nyself? I am, perhaps, leas able to judge what you have sent me, because I am loss intimate with my own works than with those of other people; but I was altogether pleased that you should have found in them the motive for saying pleasant things about me."

# THE SUPPRESSION OF D'ANNUNZIO'S "FRANCESCA DA RIMINI,"

THE character of D'Annunaio's new play, "Francesca da Rimin" (see Tit Literkart Dioxer, December 21), and the reception accorded to it by the Italian public, critics, and authorities, preent many novel-and seusasional features, and have aroused keen interest in the dramatic circles of Europe. That Madanne Eleanora Diose's appearance in a tragedy which competent critics declare to be one of the masterpieces of Italian literature should have been greeted by a great audience with "lisses and eat-calls" is in itself difficult to understand. That D'Annunzio's drama was subsequently suppressed "on grounds of morality" by the Roman cenor seems less difficult to understand when we recall that his "Trumph of Death" met with similar treatment in this country. In the current issue of The Erra (Philadelphia), Mr. Henry F, Keenau explains that the extraordinary diseaged of every principle of dramatic art showing

promise to make every line of the poem historical; he had put in the months of the characters the archaic language of the epoch, the early Remaissance. The most entitivated among the auditory couldn't comprehend the dialog, my more than the

most enlivated among us could comprehend the meaning of the dialog in Chancer's Canterbury Tales, were they set on the stage as they are written. D'Annunyou has enemies as well us admirers in the patria, and the first night's audience seemed about equally divided among those who went to praise and those who resolved to damn. Both factions were, however, surprised; those bent on damning, at the incoherence of the play, and those bent on applause at the strange ineptitude of the author

"The five acts of the play dragged out from half after seven until after two o'clock in the morning. The the verse breathes the passionate pathos of D'Anningio's most admired work, he seemed to count more on the minute fidelity of the scenist to historical properties than to the thrilling action of the drama. The dia-

log of the first act,

broke down at its first discharge; as the denouement of the scene was contingent on the success of the bombardment, the curtain was rung down to the music of jeers and cat-calls. Now while the furies of war are carried on in the rear, Francesca and Paolo occupy the available part on the front of the stage, reproducing that memorable scene drawn by Dante; the sudden dawn of the long shrouded love, the embrace of death; the lip to lip that was to madden the furious Malatesta. Fine as were the phrases, delicate and searching as was the shading of sense and melody with the Juliette rhapsodies of Francesca, the scene to the audience was little more than dumb

CARICALURES OF DUSE

CALURES OF DUSE.

by those who undertook the staging of the play was in no small degree responsible for the storm of disapproval with which it was greeted. He writes:

"Whatever the literary merits of the text, the audience was unable to comprehend half that was uttered by the immense dramatis persona. The poet had adhered too strictly to his

show, as the thrilling combat in the wings and on the rear of the stage diverted the eye and deadened the voice."

Duse and Salvini "lost in one night the standing won by years of artistic effort," hampered, as they were, not only by the crudities of stage management, but by the nature of the dialog. "Such license of speech and innendo as the French stage, or worse, the dramas of Beaumont and Fletcher, never ventured, "declares Mr. Keenan, "stupefied the dilettante dames of Rome."
The theatrical manager strove to limit the action to make the drama viable, but D'Annunzio refused to "desecrate" a line or scene. After fortnight of picturesquely stormy vicjasitudes, this "rhapsody of crotic idealism" was probibited by the Roman authorities.

The fournal des Débuts (Paris) declares that "the very choice of the subject plqued Italian curiosity," and continues:

"D'Annunsio made up his mind to transfer the Francesca da Rimini episode to the stage. To take up such a subject, immortalized by Dante and already put on the boards by Silvio Pellico in a tragedy still popular, seemed like a wager and all were eager to acknowledge its success. We shall surprise no

one by saying that the somewhat audaeious nature of the undertaking was just the thing to draw D'Annunzio ou."

The Kreuz Zei-

The Kreuz Zeitung (Berlin) says:

"Ever since the great actress, Eleanora Duse, formed a sickly weakness for Gabriel d'Annunzio and his neurotic lyrinium the two have played into each other's hands. They have been more and more swaved, apparently, by the dream of a resurrec tion of classical Lat-Around the in art pair of them has formed an impenetrable circle of silly admirers and Latinical jingoes. These worshipers have held the pair so firmly under the spell of their own

THE PROGRAM OF THE PLAY. Courtesy of The Theater (New York),

wisions that any attempt to enlighten them must come to nought."

Of the literary construction of the drama the Rome Tribuna
says:

"The tragedy derives its action and its atmosphere from Dante's poem. In a fervent impulse of Dantesque religion, D'Annunsio essayed to unfold and interpret, in all its varied, complex, and profound detail, the epusied in the fifth cant of the Inference. He essayed at the same time to recreate the historical atmosphere in which alone the actions and the passions of the personages could be again invested with their true significance and their true value. . . D'Annunish introduces a new element into his tragedy—the ordered for fire, the evel of purification before willingly surresidering herself to the course of lower.

Mr. William Archer, the English dramatic critic, who witnessed the first-night performance of the play, pursounces it "a great drama and a magnificent addition to modern Italian literature," and says further that "a comparison with Mr. Stephen Phillips's 'Paolo and Francesca' merely serves to throw into relief the characteristic merits of each tragedy." In an elaborate analysis of the two plays in The Parl Matl Magazine (Pebruary) he declares that Mr. Phillips's play is a "tragic diyll," whereas D'Annunio's should rather be called an "historic tragedy." Mr. Phillips's girl-Francesca "gildes passive and almost unconscious to the fate"; D'Annunio's womanFrancesca "succumbs to it in an agony of mingled scorn, resentment and passion." The English critic goes on to describe the Italian play in terms of highest praise, maintaining that in its "masterly" and "wonderful" treatment it is "well worthy of its great original."

To great original.

D'Annunio refused to accept the verdict either of the Roman public or the Roman censor, and carried the play into the tother Italian cities, where it met with a much more cordial reception. According to the London Academy (January 25), the play was performed without let or hindrance in Naples and Florence, and drew "conrmous houses." In both of these cities of the day of performance," and "on the second representation at Thorence the anthor was called before the curtain four times at the close of the third act." D'Annunio announces his intention of bringing the play to this country next October, with Duse and Salvini in the leading rôles.—Translations made for The Litteract Dieses.

# DEVELOPMENT OF LITERARY CRITICISM IN FRANCE.

SO great has been the development of the French critical spirit during the ninetenth century that it is often claimed that literary criticism in France has become the most authoritative and influential in the civilized world. Mr. Edward Wright, in an article on this subject in The Contemporary Review (January), maintains that French criticism is entitled to this high ranking not only by its catholicity, but by the cooperation and continuity of its schools. "For many years," he says, "Paris has been the exchange for the transactions of European literature. Ideas, and above all literary ideas, originating in Russia, in Norway, in the English-speaking countries, in Italy and in Germany, can hardly be said to be universal until they have been distributed in France." He continues:

"In comparison with the more general qualities of mind which other nations have displayed during the extension of culture in the nineteenth century, the inordinate development of the critical faculty in all departments of intellectual activity in France may at first sight appear inexplicable. Yet with the easy wisdom that comes after the event, one can now say, on reviewing the characteristics of the purest types of French genius, that this development was bound to occur whenever circumstances were favorable. The common quality that unites the work of Montaigne, Pascal, La Fontaine, Saint-Evremond, and Voltaire with the work of men of such different aims as Rabelais, Bossuet, Molière, La Bruyère, La Rochefoucnuld, Montesquieu, and the Encyclopedists, is the critical faculty in its outward or introspective play, The satirist applied this spirit of discernment in humorously exaggerating the abuses of his time; the great bishop applied it in theological science and historical work; the playwright, the character-writer, the artist in epigram, to Society; and in the eighteenth century, the power of alert and piercing criticism was gradually withdrawn from the work of creation into matters in which its dominion over the other properties of the mind is more easily cognizable.

Touching lightly on the achievements of De Staël and Chateaub: and, who were esseutially interpreters of English and German literary standards, and of Vilemain and Nisard, "the real founders of modern French critical methods," the writer proceeds to a consideration of Sainte-Beuve, one of the most famous of the French critics. He save:

"Saite-Beuve had no system; it was one form of vanity that disainte-Beuve had no system; it was one form of vanity that of gently, who had been a few of gently, who had been a few of gently, who desired the property of the waste for the control of the work of the waste for the wast

wished to be certain of entering wholly into his work, could be interrogated on too many subjects or in too many ways. White meropated on too many subjects or in too many ways. When was his religious belief? How was he moved by the spectacle of nature? How did he conduct himself with regard to work with regard to work of the manuary. The was the poor with regard to make the properties of the properties. To none of the answers to these questions was Sainte-Beuve indifferent when he was studying the author of a work of literature in which all the author of a work of literature in which all these matters had a part. By little and little, with the help of a thought sainted and state with the work of analysis was lost in the work of creation: the portrait moved and spoke—if was as many the was and spoke—if was as many.

After Sainte-Beuve came Scherer, who "criticised with equal force, luedity, and precision the masterpieces of Germany, Italy, and England "; Montégut, who "wandered in the by-paths of English literature and studied the modern writers of England and the United States"; and M. de Vogié, who "introduced the great Russian authors to the cosmopolis of letters." A much greater figure, however, than any of those was Taine, "the Hobbes, the Hume, the Macaulay, and the Huxley of his age," "During the last thirty or thirty-five years," remarks Mr. With, "every department of intellectual activity in France. has been pervaded by the spirit of Taine." He says further:

"Taine, in his history of English literature, proved himself to be more a poet than a man of science, and more a hero-worshiper than an historian. Shakespeare, he admitted, broke his framework to pieces. The works which he should have calmly analyzed and resolved, as a chemist would a compound, he described with enthusiasm and rhetorical eloquence. These outbursts, nevertheless, do not make him entirely abandon his theories. They only interrupt the statement and application of them ; and the scientific intention is sufficiently in evidence throughout the work to lead him into estimates far more thoroughly incorrect than any that can be found in the essays in English literature of Sainte-Beuve, Scherer, Montégut, de Rémusat, and other eminent French critics. In spite of these defects, however, Taine's history, by its masterly arrangement of large masses of material, by its iridiscent and arresting style, by its force of statement and penetration of judgment, became and remains one of the literary masterpieces of France."

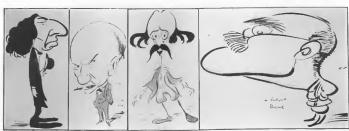

From the brilliant galaxy of living French critics, which includes M. Brunetière, M. Bourget, M. Faguet, M. Rod, M. Anatole France, and M. Jules Lemaitre, the writer-selects M. Faguet as being, within the limits he clearly defines for himself, "the clearest intellect in France." M. France is described as "the most benevolent of cyuics and one of the most delightful of writers," while M. Lemaitre "has more conservativeness at heart, and yet on the surface exhibits more vivacity and a more glittering play of roguish malice and subtle wit." Mr. Wright makes the following estimate of M. Brunetiër's work:

"M. Brunetière, despite his vast erudition, which I suspect to be encyclopedic in two meanings of the word, is not, as a literary eritic, sure, illuminating, suggestive, or engaging. His chief work on French literature explains with fulness and ingenuity its author's dogmas, predilections, and distastes. It treats at length the periods of comparatively unproductive transition, because, however uninteresting they may be, it is usual to describe them in matters of natural history or physiology! After giving in the form of notes a bibliography of each writer, and asking a vast amount of unauswered questions about the works, M. Brunetière uses the literature of his country as a thread upon which to string his generalizations with reference to the spirit of the Middle Ages, the Renaissance, the incarnation of the Teutonic spirit in the feudal system, the Reformation, and the transition of Europe from the 'homogeneous' to the 'heterogeneous,' In real literary criticism the history is below the standard which one would expect from a French critic of the third order. Mr. Brunetière in fact appears to me more a German than a Frenchman."

A striking feature of the development of the critical spirit in France is found in the fact that most of the French novelsus of the day have been literary critics. M. Zola, M. Bourget, who sassiled him, M. Rod, his former disciple, M. de Vogië, M. France, and M. Lemaitre, are all instances of this. Criticism has become, in fact, in the words of one of its most brilliant masters, a kind of novel. To quote M. France: "It is the last in point of date of all the forms of literature, and it will perhaps end in absorbing them all. It is admirably adapted to a very civilized society, rich in memories and with long traditions. It is particularly appropriate to a world of curious, well-informed, and polished people. In order to prosper it supposes a greater general culture than all the other kinds of literature, and for its development it has required an epoch of absolute intellectual freedom."

# RUSSIAN WRITERS ON THE FUTURE OF THE NOVEL.

In Noncluding a review of the serial fiction in the current periodicals (in Russia nearly every novel of importance sees the light first in a magazine), the literary critic of the Rousskye Bogatistro, a leading monthly, asks: "What has happened to Russian kellis-lettres? Why has our fiction become so colorless, vapid, devoid of originality and power?" Even the youngest

-From The Pall Mall Magazine.

novelists seem to have lost their hold on life and character, Gorky himself being accused of mere reiteration of previous themes

Gorky has been interviewed, and he has expressed certain ideas which are regarded as remarkable even for so bold and realistic a novelist as himself. He is represented as saying :

"It is difficult to write fiction nowadays. I am not aloue in experiencing this; Tchekhoff [an older and talented novelist] has expressed the same feeling in talking to me. The democratic readers grow rapidly in numbers, and they demand the clear, simple style and a few definite situations which might be laid at the foundation of a new view of life. One can not get rid of the idea that our fiction, our stories, are no longer needed, and that what is needful in place of that is a sort of compound of fiction and didacticism, a new form which would enable one to deal directly with things that interest and absorb the general mind.

The new readers, the democracy of the world of letters, Gorky declares, will not waste time on mere art or amusement. Answering certain objections to his own delineations of Russian character, be says:

"I have been reproached for giving little attention to the mysticism of the Russian people; only recently M. de Vogüé remarked that I was not reflecting national ideas at all in my works, and that I was not writing like one living in Russia, But what am I to do when, in truth, in the new elements of the Russian people emerging into conscious life mysticism is gradnally disappearing; when in these great questions they are seeking simpler and not more complex solutions, and the more comprehensible these answers are, the more readily are they adopted, The new elements are strongly idealistic, with a stock of fresh, pure idealism; but this is all concentrated on the question of human, social relations, on the solving of the problem how to live. Just at present certain advanced writers are propagating idealism, and they seem to fear that the rise of democracy will endanger culture and the hard-won fruits of civilization. What error! They do not realize that there is more idealism in the masses than in their own selves, and that, in fact, it is from the great national source that they are drawing their own idealism,

The task of writing for these earnest, idealistic, simple, and persistent seekers after truth is very difficult, Gorky repeats, and the old style of the novel has ceased to respond to the new mental and moral needs. A writer in the Novoye Vremya, dealing with the future of the novel, reaches the same conclusion and predicts the extinction of this form of imaginative literature. In Russia, he insists, the novel will die sooner than anywhere else in Europe. His argument, long and rather disconnected, may be summarized as follows:

Take the greatest novels ever written. What are they? Demoustrations by means of images and invented characters of certain theses. Science and the stern reality of life are bound to destroy the novel. It is ont of harmony with the scientific and materialistic spirit of the age. It is dying a natural death. The more industrial and strenuous a nation is, the fewer novelists has she; only the backward, the passive, the visionary peoples produce great novelists. In America, for example, the art of novel writing no longer exists; there are numberless novelists-journeymen, writing to order and for money, but this is not to be elassed with literature. .

The fable, the national tale, the folk-song have died. Why not the novel? It, too, is subject to the law of evolution. It has seen its acme, its highest point, and is on the decline. No more Goethe and Schiller for Germany; no more Tourgeneff and Gogol and Dostoievsky for Russia. We have humorists and realists galore, but we have neither humor nor realism. Poetry, too, is gradually dying. Life is becoming harder and more prosaic, and there is little room for illusion. Science can not die; religion can not die; but so-called "literature," as represented by novels and poetry, will disappear,

The writer declares that every nation finds its highest and best expression in one or a few writers, and then becomes dumb and sterile in a literary sense. England was completely mirrored in Shakespeare, and she can never again attain that plane in poetry and the drama. In the advent of Decadentism-an appropriate name-there is the most marked symptom of the death of poetry. In the novel, art has degenerated into crude, hackneyed imitation or into didactic treatises on sociological problems. There can be no revival, but only further decay and extinction .- Translation made for The LITERARY DIGEST.

#### THE BOOK BAROMETER.

"HE booksellers' and librarians' reports for the month ending January 1 show but few changes as compared with the lists of the two preceding months. 'The popularity of "The Right of Way " and "The Crisis" does not appear to be waning, and such books as "Kim" and "The Eternal City" are still in great demand. We quote the appended lists from The World's Work (February) :

NOTES. The Edinburgh Review, founded by Sidney Smith and Francia Jeffrey, will celebrate its hundredth anniversary with the April number.

THOREAU'S hut in Walden's wood, which is some distance beyond the Emerson estate, is still shown as one of the interesting spots of Concord. His finte, which was said to be of so sweet a tone as to charm the birds and squirrels, is in the possession of a sculptor who resides in New Bedford.

THOMAS SIDNEY COOPER, whose death is reported from London, was the oldest of all the Royal Acedemicians. He exhibited for sixty-seven co secutive years at the Royal Academy (thus constituting a record), and his pictures of cattle are world famons. Cooper lived on a pleasant homestead near Canterbury, where he'kept a large stock of sheep and cattle as "models." An art school, which he founded in the old cathedral town, adjoins the house in which he was born, ninety-nine years ago.

THE Paris Figure is authority for the following story : "A fine old man sion in the Latin Quarter, containing many mural pictures by the celebrated Fragonard, was rented by an English lady whose sense of decorum was so greatly shocked by the pictures that she had them covered with white canvas. The next year she was succeeded by another tenant of more robust constitution, who removed the canves and found nothing but defaced walls. The modest miss had taken the pictures in England ! "

#### SCIENCE AND INVENTION.

#### ELECTRICITY ON THE FARM.

THE advantages to be gained by operating farm machinery electrically are set forth in Science Hustric by M. E. Dicudonné. The writer advocates the installation of central stations in farming districts, to supply a number of neighboring

AN ELECTRIC THRESHING MACHINE

farms with current for power, heating, and lighting. M. Dieudonné refers to the increasing importance of electricity in industrial operations, and asks, How can this new source of power be applied to the operations of the farm? He answers as follows:

"The industrial application of electricity is now becoming so general that this form of energy is playing a more and more important part, and is exercising on our civilization a more powerful influence than that of any force known.

"In dividing the mechanical power between different machines there is a choice, speaking generally, between two methods: "I, A single motor can be installed which by gearing or belt-

ing will run all the machinery.

"2. The current from the generator may be led to a central distributing station where it will be divided into as many cir-

ELECTRICITY IN THE DAIRY.

cuits as there are separate motors, each operating a separate implement. . . . The choice between these two solutions depends at once on economic considerations and on the facilities for work at the disposal of the farm. "Among the machines to be employed there are some, such as root-cutters, separators, etc., that require great speed. This may be obtained by making the transmission pulleys of sufficient diameter. . . . We may imagine that all work now done by hand could be executed more quickly and better by machinery. Thus electricity can be applied to the sewing-machine, to devices for cleaning and blackening larness, for polishing and cleaning tools and cutting-instruments, to ventilators, pumps, mills, and to a multitude of other ness. Of course it will play the foremost

part in the lighting of the house, and of yards, stables, and barns. The danger of fire, which is so great in barns and stables where lamps or candles are in use, will be avoided. Insurance companies will thus reduce their rates, which is an indirect measure of economy due to the use of electricity.

"The water from well or pond will be raised to an elevated reservoir, and its pressure will be utilized to distribute it throughout the farm buildings; it will serve for watering and even for irrigation if it is in sufficient quantity; it will make it possible to extinguish a fire at its outset. Other machines will also find application—elevators, circular saws, haycutters, forge and cider-presses.

"Electricity is also used for the speedy production of heat. . . . Electric heating is susceptible of nu-

merous applications in domestic work, as in boilers, flatirons, and the cooking of food. The heating of rooms can not be done economically by this method, at least unless there is at our disposal a cheap source of energy in considerable quantity.

"If a large number of farms should combine to set up a single central plant, there would of course be less expense in the first establishment of the system, and each one's share of the running expenses would also be less,"—Translation made for Tue Litters that the state of the

or at least that the receut deaths of his brother, the Duke
of Saxe-Coburg, and his sister, the Dowager Empress of Gernaus, have made him apprehensive on his own account, lead
The Medical Areas (February 1) to say a word editorially about
the general health of the royal families of Europe. Says the
writer:

"Some of the radical English and Irish papers have recently suggested that at least the predisposing cause of the illnesses which are so common in the royal families of Europe at the present time is their utter disregard of the great law of nature that discountenances the marriages of near relations. Ordinarily such remarks night be passed over with the reflection that political bins ensity led to the assumption of general truths from particular instances. Mr. McCarthy, whose intimate acquaintance with contemporary history is well known by the many readers of this relative of the ordinary of the second of the s

"To Americans generally it will, we think, come as a distinct surprise to learn on Mr. McCarthy's authority that with the exception of the King of Sweden, a descendant of Bernadotte, whom Napoleon raised from the ranks and later made king, there is not a single important ruler in Europe who is not descended from Mary, Queen of Scots. In "Macbeth," which was cended from Mary, Queen of Scots. In "Macbeth," which was L1, the first Stuart ruler of England, Shakespeare puts into the mouth of the witches this prophery to Hangue, from whom the Stuarts are by tegend descended: 'Your children shall be kings.' Even the most obsequious of courtiers could not have anticipated how literally true this compliment to the Stuarts through King James was to prove. It is certainly a curious historical fact that the dynasty of the Stuarts, 'in many ways the worst dynasty,' as Mr. McCarthy says,' that ever ruled over England,' should have left so many descendants among the reigning houses of Eutrone.

"Meantime there is for the student of medical antihropology the spectacle of a series of inbreeding intermarriages that demonstrates the dangers and effects of marital consanguinty. Perhaps the lesson of the necessity for exercising more care regards the relationship and other qualities of marital partners are gards the relationship and other qualities of marital partners may thus be taught by example, if it can not be enforced by the legal measures that are now so commonly suggested. In a word, the history of the present reigning families of Europe is an open new blood is not without the present reigning families of Europe is an open new blood is not without the present reigning families of the original twice tendencies of the original stock. The lesson may be learned better from a 'horrible example' than from the cold logic of statistics on the subject."

#### DEVELOPMENT OF SONG IN BIRDS.

SOME interesting observations bearing on the propensity of hirds to acquire new methods of expression in song are contributed to Science (January 31) by Prod. W. E. D. Scott, of Princeton, whose investigations on bird-song in capitivity were noticed in these columns recently. Professor Scott treats the subject under three heads: first, the disposition of wild birds to interpolate new phrasing into their song, or to acquire new songs; second, education of expression, by direct teaching in confinement; third, the propensity of caged birds to imitate sounds voluntarily. He says of the first:

"Every trained field ornithologist discriminates individuality in song, and some have been so fortunate as to have noted wide and radical departures from what I have distinguished as the normal song. The slight variation from the normal is of to common occurrence to be dwelt on here. Saffeet to say that, most observers recognize degrees of excellence in the songs of wild birds of the same kind.

"Again, a few observers have heard wild birds imitate or produce no tool by the songs of other birds, but also the barking of dogs, human speech, and mechanically produced sounds such as and the treaking of a wheel, the hiling of a saw, and the like. In facility of the mecking-bird in this particular is traditional. A few other instances seem worthy of record.

"A cathird that nested in the immediate vicinity of my house in the season of 1900 reproduced the call of the whip-poor-will so perfectly that it was difficult to induce members of my family and visitors who heard the reproduction to credit the fact that it was not the whip-poor-will singing.

"The following case of a wild rose-breasted grosbeak talking is well attested. I quote from Emily B. Pellet, Worcester, Mass., in Bird-Lore, October, 1901, as follows:

"Early last summer, while standing on my back steps, I heard a thereful voice say, "You are a pretty bird. Where are yon?" I supposed it to be the voice of a parrot, but wondered how any parrot could talk loud enough to be heard at that distance, for the houses on the street back of us are quite a way of

the houses on the street back of us are quite a way off.

"'Almost before I had done laughing, the voice came again, clear, musical, and strong—"You're a pretty bird. Where are you?"

you?"
"For several days I endured the suspense of waiting for time to investigate. Then I chased him up. There he was in the top of a walnut-tree, his gorgeous attire telling me immediately that he was a rose breasted grosbeak.

"At the end of a week he varied his compliment to "Pietty, pretty bird, where are you?" With a kind of impatient jerk on the last you.

"He and his mate stayed near us all last summer, and the I

heard him talk a hundred times, yet he always brought a feeling of gladness and a laugh. "Our friend has come back again this spring. About May I

I heard the same endearing compliment as before.
"Several of my friends whom I have told about him have asked," Does he say the words plainly? Do you mean that he really talks?" My reply is: "He says them just as plainly as a

bird ever says anything, so plainly that even now I laugh whenever I hear him.""

Professor Scott writes as follows of the education of birds by man-the second division of his subject:

[February 15, 1902

"The bullfinch's ability to learn to whistly airs with great accuracy and precision, as well as the peculiar quality and charm of its voice, has arrested the attention of all observers and has been cultivated for more than a century. Few of us, however, realize that only wild birds hand-reared from a very early age are educated in this accomplishment, and it is worthy of special notice that wild bullfinches have little or no song, and may be compared with the European sparrow as a songster. Starlings are well known as birds susceptible not only of learning to whistle simple melodies, but as rivals of parrots in reproducing with great distinctness short sentences. Parrots are proverbial as talkers, singers, and whistlers. Canary birds have frequently been recorded as learning to whistle simple tunes, and there are a number of well-attested accounts of their reproducing with preeision short sentences. Jays, crows, and magpies also talk and whistle with great facility. The voices of jays in reproducing speech are particularly melodious and lack the peculiar phonographic timbre characteristic of most parrots and of starlings.

"Mention must be made here of the minos of India as on the whole the most receptive among birds in learning to talk, sing, and imitted all sounds of a mechanical kind. All these results have been achieved by education, that is, direct teaching with intent on the part of the human instructor.

Of the third part of the discussion, which deals with the propensity of caged birds to imitate or reproduce sounds voluntarily, the writer says

"No direct effort or tutention on the part of a human agent is a factor in this category. All but one instance that I shall adduce of this kind of ability have occurred in an experience covering some six or seven years with brids obtained in ways, and kept under conditions, that require brief consideration. These birds are all hand-reared wild species; birds taken from the nest when very young and raised by hand. As soon as such birds were able to feed and ease for themselves they were liberated in large rooms having as near freedom as confinement would allow. No observes what their swould do yl left to themselves and supplied with food and water. No effort was made to keep these birds from hearing the song of will birds out of doors.

"It will be sufficient for us to consider only the very marked acquirement shown by individuals among these birds, none of whose songs are quite normal. A number of the robins lave peculiar songs that in no way resemble wild robins' songs. I should call them invented songs, for lack of a better name.

"The wood thrushes' song varies much from the normal, but can hardly be regarded as invented or original.

"Cathirds did much mimicry of the songs of other birds. . . . . "One of a brood of red-winged blackbirds, a male, crows constantly for but two mouths in the year. The crow is an imitation of the crow of the common bantam rooster. . . . This is the only song this bird has.

"A blue jay reproduces the song of the cardinal so perfectly as to deceive any one. It is copied from a cardinal in the room, and distance and direction are not indicated.

"A European jay has learned from a cockatoo to say 'How do you do,' 'How do, pretty polly,' 'Pretty polly,' and some whis tles and calls."

Professor Scott also quotes from a correspondent the story of a duck latched out on a Wisconsin farm with thirteen turkeys by a hen as a foster-mother. "This duck followed the turkeys around and wavered a very long time before it went into the water, and it still minitest be turkey's most with its duck via. It sleeps under the turkeys roost at night, altho it is quite an old duck, and scorns the company of other ducks on the plantation." The writer goes on to say:

"In concluding, a word is necessary as to the probable reason why birds in confinement diverge from the normal in the habits of song. Presuming that wild birds are pretty constantly employed in obtaining a food supply, it would seem that they do not have much leisure. On the contrary, birds in captivity, with all their physical wants carefully looked after, have leisure and employ it in giving their attention to occurrences about them, particularly such as are accompanied by any noise.

"Of this factor of leisure among animals in confinement little is known, and a broad field is presented for those investigators who have opportunities in zoological gardens or, better still, in special laboratories equipped for this and kindred studies."

#### A VEGETABLE PARTNERSHIP.

I F we accept the conclusions drawn from a recent investigation by a French botanist, M. Nočil Bernard, there exists a curious connection between plants of the orbid family and a microscopic fungus that infects the soil in which they grow. According to M. Bernard, the seeds of an orbid are unable to germinate until they have been penetrated by this fungus, and hence the fungus does not exist. This, M. Bernard thinks, accounts for the difficulty of raising orchids from seed i- mossible in soil where the fungus does not exist. This, M. Bernard thinks, accounts for the difficulty of raising orchids from seed—a difficulty so great that it was once rated as an impossibility; and also for the fact that altho orchids produce a very large quantity of seeds, they are among the rarest of plants. The theory of M. Bernard is described in La Nature (Paris, January 18) by M. Henri Coupin, who writes:

"Most plants of the orbid family are propagated by tubercles that form at the base of the stem. These produce a large quantity of seeds, but it has been remarked that they either will not germinate or do so with difficulty and in conditions that whe been imperfectly determined. In a thesis presented to the Paris Faculty of Sciences M. Noël Bernard has endeavored to clear up this point. He arrives at the following conclusion: The rudimentary seeds of the orbids will develop only when a certain fungus has penetrated some of their cells: their germination can not take place without the action of this micro-organism.

"This fungus, an 'endophyte,' can be found in the youngest germinations, even those that have formed only a few cells. And as it does not appear to exist in the seed, it must come from the surrounding medium. Thus the infection of the soil must be one of the necessary conditions of germination of the seeds. The convinced of this, it is only necessary to recall the conditions under which cultivators have been able to introduce and acclimation or the seeds.

"The orchids have been introduced not by means of their seeds, but by slips, propagated from bulbs. It may be remarked that in this way there are introduced at the same time the fungi that surround the roots... The efforts of isorticulturists, the precautions taken to use only special soils for the cultivation, have resulted in acclimatizing the endophytes of the orchids as well as the orchids themselves.

"The remarkable fact is that the germination of the seeds, which was one regarded a almost impossible, has become practicable since the endophytes have been acclimatized. ... The method employed is to sow the seeds on the mossy surface of pots or baskets in which the adult plant lives. The roots of this adult plant, say the gardeners, make the compost 'bealthy' and render the germination possible. ... If now we remember that the roots are infected, and that the endophytes that they contain can live independently, as saprephytes, in the soil, it would appear that we have a right to conclude that the process is merely the process of the process in the work of the process in the soil is the work of the process are the

"The necessity of infection may aid us in understanding why the orchids, which produce seeds in immense numbers, are relatively rare in nature. A single plant of Orchis maculata can produce more than 6,000 seeds, and lecratin exotic orchids have more than a million to the capsule and as many as twelve capsules to each plant. If all these seeds should develop, the progeny of one orchid would be sufficient, in three generations, to cover the entire surface of the earth with a uniform coating of green. 'We do not know,' says Darwin, 'how so astonishing a rate of progress is arrested.' From what follows, it appears, nevertheless, that Darwin had been led to believe that the orchids are not protected against the dangers that threaten them

in the strife for existence, and that the young plants must be destroyed in great numbers. M. Noël Bernard thinks that this is not the case; young plants are manifestly rare in nature, and we seek in vain for the cause of their destruction. The truth is that an immense number of the seeds do not fall on soil infected by the species of fungus whose presence is necessary for their germination.

"Here we have a case entirely comparable with that presented by a great number of parasitic animals or plants that produce an almost infinite number of eggs or seeds, most of which are lost because they can develop only in very narrowly limited conditions. The infection of the soil, which is a constant condition of the life of the adult orchids, is also a condition without which the embryo of these plants can not pass beyond the state of developone and there are great presumptions in its favor, althou the palpable and irredutable proof remains to be discovered."—Translation made for Tus Latrasca Placts.

#### DOES ELECTROCUTION KILL?

THE question whether execution by electricity is really effective, or whether the victims are merely stunned by the current, to meet death later from the surgeon's knife at the autopsy, still occasionally provokes discussion. Electrical journals have often decided it in the negative, being apparently unwilling to acknowledge that an electric current can be other than beneficent. Interest attaches therefore to an editorial paragraph in The Electrical World and Engineer (January 25), in which it is stated that the death of condemned persons in the electric chair is not open to doubt. Says the writer:

"In the first place, it is a matter of mnfortunate expreience that occasionally persons are killed by accidental electric slocks. That is to say, they receive a shock and fall down unconscious. That is to say, they receive a shock and fall down unconscious, and from this state they never revive, so that in the course of a certain number of minutes or hours there is no doubt in the minds of the most unskilled observer that the person is dead in some cases, however, persons recover, either with or without the aid of assistants, such as artificial respiration and stimulation and stimulating animation several hours after loss of consciousness by drowning, has raised the question from time to time as to whether similar treatment can restore animation to the electrically shocked.

"As regards slocks accidentally received, efforts should always be made to resuscitate the unconscious victim of accident. The question as to whether he can be revived should be settled by tial, and failure not accepted until the aces is clearly hopeless. In the case of electrocated criminals, the conditions are entirely different. When a man receives an accidental shock the maccilar contraction usually tends to throw him violently away path through his body is neadly high. The current he receives is therefore, under ordinary circumstances, neither powerful nor prolonged.

prolonged.

"Under the conditions of electrocution, however, the current application is relatively both powerful and prolonged. In fact, it is sufficient, at least in some cases, to raise the temperature of the body appreciably, owing to couleae effect, and invariably trocutions that have been made since the existing New York State law went into effect, and the fulness with which the subject has been reported upon, there can be no question that the subject this bear reported upon, there can be no question that the subject this bear reported upon, there can be no question that the subject this bear reported upon there can be no question that the subject this bear properted upon there can be no question that the subject this bear of recovery before the autorys takes place."

Reported Electrical Consumption Cure.—Still another cure for tubercniosis is announced in the daily press. It is stated that Dr. T. J. Bokenham, a London surgeon, has obtained striking results by using high-frequency electrical currents. The patient lies down and a current at a pressure of 80,000 volts is applied for ten or fifteen minutes to the chest by means of a brush held a few inches from the body.

A despatch to the New York Herald (January 25) says:

"Dr. Bokenham's experience is that in very bad cases of con-

sumption the cough has been greatly reduced, night sweats have disappeared, the appetite has improved, and there has been greatly and great gain in weight and general health. So that even if the consumption had library and the second of the consumption had the second had been destroyed, it is certain their with their virules that they are had been much decreased; that they have been brought under control and that the patient has felt cured.

Commenting on this Electricity says.

"There would seem to be a doubt among the specialists as to whether the treatment affords a perminent cure or only a temporary exhilaration. In cases where the disease has not as yet obtained a firm grip, it might cure; but from wint the despatch says, the method of treatment does not apparently differ from several that have been tried in this country with questionable results so far as lasting cures are concerned. However, the London surgeon is apparently working in the right director even tho a permanent cure is not effected, for any discovery that will alleviate the pain and suffering and prolong a tubercupts patient's life for a reasonable period should prove a blessing to humanity."

The medical journals have not yet given an opinion on the merits of this reported method of treatment.

#### A WIDESPREAD POISON.

T HAT the country is flooded with n fatal and insidious poison not only dangerous to life but liable to cause total blindness if its victural live, as secreted by an editorial writer in The Medical Times (New York, February). This agent is wood alcohol, whose virulence as a poison has been atmost unsuspected until recently. It is an article of daily commerce, and is not only on sale in every drug-store, but is consumed largely as a solvent for variasiless and shellaes, for burning in lamps, for external applications, in the manipulation of extracts and escence—in fact, for all the purposes for which ordinary alcohols employed. It is no longer repulsive in taste and smell, for it is now so puritied and decolorized as to be readily mistaked now grain alcohol, while its cost is less than half that of the latter. Hence, too, wood alcohol is not infrequently swallowed as n beverage, and its use in this way seems to be increasing. Says the

"The quantity of this agent required for the production of toxic deflects has varied in different cases from half an oince to pint. Sometimes the trouble has been attributed to mere inhala-toxic tion of the vapor, while working Inside where caseks, with shade dissolved in wood alcohol, or from cleaning old furniture with a citoth saturated with the first contraction.

"Says Dr. Burnett: 'The clinical histories of all cases of woodalcohol poisoning reported up to the present time have a distinct likeness, and are not similar to those accompanying any other form of toxic amblyopia yet studied. In fact, from the clinical history and the appearance of the fundus we can predict with almost certainty in any particular case that the poison was wood alcohol, so consistent are its manifestations.

"According to Dr. Guss: 'The symptoms most usually observed in cases which did not prove fatal were those of acute gastro-entertitis, gastrie pains, vomiting, headache, vertigo, delirium, and more or less unconsciousness or semi-consciousness for a variable period; at the same time the pupils were widely dilated and there was a loss of vision in both eyes, generally complete within twenty-four or forty-eight hours. After a few days there was usually a gradual return of visual power to a limited extent; then there followed a gradual failure, generally resulting in permanent bilindness. . . In the fatal cases the symptoms of acute poisoning were more pronounced. Blindness was recognized as a feature in one-half of the fatal cases cited, and in three of the other four it may have been masked by unconsciousness.

The alcohol appears to cause inflammation of the optic nerve, as shown by the ophthalmoscope, accompanied by an affection of the retina in which the veins become twisted and filled with dark blood. Treatment seems to be of little or no avail, either in preventing or curing the disease. To quote again:

"The important conclusion is that the country is flooded with

a subtle poison even more dangerous to vision than to life itself, since, whenever a totic amount of word alcohol has been taken (and this amount, as already stated, may be very small), we must expect a blindness more of less compilete. The only means of meeting such a calannity is to prevent, as far as possible, the ingestion of the poison, by labeling it with the 'skull and hones,' and by informing the people, through every possible channel, of the highly dangerous nature of the drug."

Marconi's Debt to His Prodecessors,—At the annual dinner of the Engineers, where Nignor Marconi was a guest, the noted inventor, after making acknowledgment of his milebtediness to the work of his predecessors, mentioned specifically the names of Maxwell, Lord Kelvin, Joseph Henry, Professor Hertz, and Prof. Alexander Graham Bell. Commenting on this, Harper's Heckly says:

"This is downright disingenuous. Signor Marconi is not ignorant of the history of wireless telegraphy; of it he might say, 'All of which I saw, and a part of which I was.' The names of the men who, far more than he himself, have made his recent trinmph possible, are known to him, all. Why, then, are the real workers, to whom he is indebted, passed in silence, and others, to whom he owes little-in one case nothing-set in large view? The existence of electric waves was predicted by Maxwell in 1864. They were actually discovered by Hertz in 1887. But neither Maxwell nor Hertz ever dreamed of utilizing these new oscillations to transmit signals. That idea came first in view with the discovery of the delicate coherer by Professor Branly, of Paris. Yet even he failed to catch sight of its tremendous possibilities. It was Professor Lodge, of Liverpool. who appears to have been the first, and it was he who rigged up the little tapper, or decoherer, which makes it easy to spell out words on a tape, just as with an ordinary Morse instrument. Professor Bose, the Hindu savant, also contributed his share. Perhaps he was the first to actually send a signal. The form of the sender, or oscillator, which Signor Marconi uses was devised by his countryman, Professor Righi. The idea of 'tuning' two instruments to work in unison, so that they will respond to no others, of which Marconi makes much, is, again, due to Professor Lodge, who gave it its name, 'syntony.' Why are all of these names left out? Is the young man unwilling to divide his honors? And what, pray, has Professor Henry, who died before the Hertz waves were known, to do with the case? Or Lord Kelvin, who has contributed practically nothing to the subject?

And if Professor Bell is to be mentioned, because he invented the telephone, why not Morse, who devised the key which Marconi employs to send his signals?"

#### SCIENCE BREVITIES.

"Soute measure of the extent to which mechanical stokers are now being applied to stem-holders," as *Clause's Magazine*, "is fortunable by what is being done in connection with several of the large power-houses at present going up in New York. At the Manhattan Radiway power-house, for example, the total installation, when the plant will be completed as designed, will be just stokes attached to innety-size sports—power-house, for example, the conditions of the control of the complete as designed, will be just stokes attached to innety-size sports—power holders."

MARGORI A-D-THE CABLE COMPANY—There are, perhaps, two reasons, assa Caster's Magazine (Perhapsy), "why interference on the part of the Anglo-American Cable Company may not be altogether displeasing to Marconi. One is that it avoids the need of proving to disinterested witnesses, whose hearing might not be of the requeste accuracy, the actual nesses, whose hearing might not be of the requeste accuracy, the actual heperfers to continue his experiments between England and the maintain of America, the additional haif thousand miles, more or less, to Nova Scotia possibly not weighing very mach, especially if Marconi nees, his way estation, and it certainty is of great importance to dispersize with a relaxing station, and it certainty is of great importance to dispersize with a relaxing station in New Foundation of the West Scotia possibly to dispersize the dispersion of the proposition of the Propo

ANCISTORS OF THE ELEPHANT. - The origin of the proboscideans, the Mammoth, Mastodon, and Dinotherium, which has long remained an unsolved problem, has just been satisfactorily solved, according to The Popular Science Monthly "During the summer of 1891, it says, Dr. Andrews, of the British Museum, while engaged in collecting fossils in Egypt, obtained among other mammals a small and primitive species of Mastodon characterized by the fact that no less than five teeth were in use at once on either side of the lower jaw. "Other known species of Mastodon have but three teeth in use at one time on either side of the lower taw, so that this indicates an animal of a much more generalized type. More than this, Dr. Andrews obtained numerous specimens of another animal, named Meritherium, about the aire of a large tanir, having jarge and triak like incisors and molars, whose structure suggests that of the teeth of the Dinotherium. This creature Dr Andrews considers to be the long-sought aucestor of the Mastodon type of proboscideans.

#### THE RELIGIOUS WORLD.

#### EXPANSION OF PROTESTANTISM IN FRANCE.

TillAT Protestant thought and the Protestant Church have in recent years become more and more noteworthy as a factor in the life of France seems to be recognized by its forea swell as its friends. The Naverlet Vie, organ of the mediate school within the Protestant Church of that country, recently made this statement:

"For years it has been confidently proclaimed that the church of the Huguenots is practically dead. Nothing could be further from the truth, and never had Protestants in this country better reason to look hopefully into the future than at the present, Less than one hundred years ago there were but 171 pastors and fewer than 100 churches of our faith in France; now there are 1, 200 pastors preaching at more than 2,000 places; and the most noteworthy phenomenon is the fact that Protestantism exercises an influence far beyond her numerical strength. It is not only aggressive against its historic enemy, the Roman Catholic Church, but it is taking a lead in works of charity and in the propaganda for temperance, improvement of public morals, social reform, betterment of the condition of the laboring man, and especially in foreign mission work. The twentieth century has started out very auspiciously for the Protestant Church of France

The condition of affairs thus described has called into existence a regular anti-Protestaut propaganda, headed by the indefatigable Ernst Renauld, author of the well-known anti-Protestant book "Le l'enl l'rotestant," published several years ago, in which Protestantism is pictured as the source of all the evils that have in recent decades befallen France, politically, socially, and morally. In his journal, Pays, Renauld declares that the Protestants are the representatives of "the reformed Prussian religion," identifying Protestantism with the political ambitions of Prussia, as is constantly done also by the opponents of the "Away from Rome" movement in Anstria. He appeals for a "religious, social, political, and national disinfection of France"; and aided by prominent officials in the state and the army, with a capital of 500,000 francs, he has started a new periodical in order to combat the development of Protestantism. In the initial number he says:

"For twenty-five years, some sixty thousand Protestants have dominered over thirty-six million Catholics. All the statesmen who have ruled this country during the past quarter of a century have been under Protestant influences. We are tired to begin the oppressed, the persecuted, the conquered. To effect this end is the object of this new journal, correctly called Deliverance."

In the mean while the Protestants of France are themselves showing evidences of internal weakness, especially as they divide into various "schools" along doctrinal lines, the "right" being the orthodox, and the "left" the liberals, with various compromising tendencies between the two. Special efforts to secure cooperation and harmony between the two have recently been made, with only partial success. Another element of weakness has been a rather hitter debate carried on in reference to the future of those "former priests" (ancien prêtres) who have in late years severed their connection with the church of their birth. One school, headed especially by Professor Doumergue, a leading Protestant scholar, insists that these men should join one of the existing Protestant churches, either the Reformed or the Lutheran, and not stand aloof from both, while the leader of the movement, the Abbé Bourrier, with his organ, Chrétien Français, insists upon the independence of these converts and their cause. They want first of all to be Christians. His program he announces in these words:

"The cause that we serve is more important than Protestantism as such. We are fighting for God and His Gospel, for the welfare of our brethren, and the future of France. Just as Paul was

compelled to defend his honor against misinterpretations when he began his special work among the Gentiles, so we too must defend our work and our separate calling."

In opposition to this view, Domnergue, in a special pamphilet written by one of these converts, exclaims "No; lead souls to the gospel through Protestantism. Give the former priests the old Huguenot flag into their hands, the only flag of the evangelcal cause in France. Outside of Protestantism there is no way in France of serving the gospel cause!" The organ of the liberal Protestants, called Le Protestant, openly takes sides with Bourrier, as do indeed the majority of Protestants.—Translations made for Time Literasca Driess.

### IS THE RELIGIOUS REVIVAL LOSING ITS POWER?

It has been noted in many quarters of late that the era of evangelism in the religious world seems to be passing. During the last year only a few evangelistic crusacles were undertaken, and even these were but moderately successful. The subject of revivalism has been under discussion in several of the religious papers, and it is being freely inquired whether the religious revival has lost its power to sit great multitude. So f men and women. In spite of apparent discouragement, few of the religious previous are ready to answer this question in the affirmative. "We hear much of a new evangelism, which is to take the place of the old revival," remarks The Advance (Chicago, Cong.), "but we search in vaiu for any klear definition or any marked result," It continues.

"We are apt to forget the great fact, that the the standpoints from which we view the physical universe, the social state, and the Bible have changed, human nature has not chauged, and the only thing that can now, or ever has been able to, change the heart of man is the regenerating power of the Holy Spirit. There is the same need for forgiveness of sin, cheer under discouragement, by and peace in a Savior, that there always has been. No discovery, no criticism has been able to shake these facts."

The Presbyterian (Philadelphia) and The Watchman (Boston, Bapt.) are both of the opinion that the revival may continue to be made a potent factor in the quickening of religious life, Says the latter paper:

"The truth is that Christianity does not exist in the world as the product of so-called natural causes, and it does not advance without direct supernatural impulse. The wheels are not enough, there must be a living spirit in the wheels. Perhaps our fault is that we have too much ignored the supernatural element in the whole matter. We have so far fastened our attention upon second causes that we have largely squored the divine factors. Certailly we have so greater need to-day than to restorm the supernatural elements. The supernatural elements which is the supernatural elements of the supernatural elements which we have a supernatural elements which we have a supernatural elements of the supernatural elements which we have a supernatural elements which which we have a supernatural elements whave a supernatural elements which we have a supernatural elements

"It is easy to imagine how all this would be changed under the influence of a gratious outpouring of the spirit of God. The change would be like that one witnesses in California when the water from the irrigation sluices is let in upon the baked and arid ground. The desert becomes a garden. Human nature and the power of God have not so changed within a few years that a revival is no longer possible. That is what we are to desire supremely. And the strength of our desire for it will measure our faith and our perception of the need."

The Christian Register (Boston, Unit.) believes that the failure of evangelistic efforts in the past has often been due to the "gross caricatures practised by peripatetic emotionalists." It adds.

"The objection felt and expressed against rade and violent methods of reviving religion—denunciatory and coarse—are that they are no longer adapted to the age. Whatever good such measures once did, they do not reach even the illiterate in these days,-not until mental poise is broken down. . . . What is wanted, always wanted, and what must be brought home to all classes, is the sympathy of love and the beauty of righteousness. These great living facts are not brought home to us by excitement or by terror, but by quickening in us attention to the claims of right and truth as against the false and wrong."

#### JOHN ALEXANDER DOWIE AND THE SALVA-TION ARMY.

TEW attention is directed to John Alexander Dowie and the flourishing religious movement in Chicago of which he is the leader, by the announcement that General Booth's son-in-law and daughter, Mr. and Mrs. Booth-Clibborn, and Percy Clibborn have resigned from the Salvation Army and joined Dowie's church. In a circular addressed to their friends by the seceding Salvationists the signatories declare that they have come to believe in "divine healing as based on the Atonement." Under

MW AND MUS. ANTHUM S. RODTH-12-HIROMS

date of November 30, Mr. Booth-Clibborn, who has been in charge of the Army work in Italy, writes to Dowie from Switzerland as follows

"I have decided to offer myself to you, dear Doctor, for Zion, and do so, firmly believing it to be the will of God, I had thoughts of starting a separate mission, till I got light about the Elijah matter, as that was the great obstacle. To me it could only be a gigantic error or a gigantic truth filled with unspeakable solemuity, even the 'Elijah was a man with passions like ourselves," I take it that you come in the spirit and power of Elijah and as the herald of the second coming, the Baptist of the millennial dawn."

Ballington Booth, commenting on this secession, declares that he does not see how it can do otherwise than "seriously affect the Salvation Army," since his sister was at the head of the Army in Holland, France, and Switzerland, and both she and her husband had "made a strong organization, which is very largely identified with their personalities." At the same time, it is not felt that the withdrawal will cause any serious split in the Salvation Army, as very few Salvationists are inclined toward Dowieism.

Dowie welcomes his new converts with some cuthusiasm in his organ, Leaves of Healing (Chicago, January 25). "Our heart is very happy," he says, "in the thought of their laboring with us for some time in America, and doubtless in other parts of the great, broad Field of the World, for the establishment of the kingdom of God, through the operations of Zion." He adds:

- "Their action has not been taken lightly.
- "Many will follow them, ere long, into Zion.
- "God has spoken to these men and they have obeyed. They have been listening only for His Voice. "Their actions are beyond all suspicion of proceeding from any
- other than the noblest motives.
- \*They are men who, had they chosen to go forth in independent work, would have been followed by large numbers of devoted adherents.

"But they have been led to see that Johovah hath established

Zion. "They also believe that God has raised us up to fulfil His will in these Latter Days as the Messenger of the Covenant and Elijalı the Restorer.

Later. Dowie made the announcement from his pulpit that "a cardinal of the Roman Catholic Church is trembling on the verge" of conversion,-"a great intellect like unto Newman and a great ecclesiastic like unto Cardinal Manning," to quote his words as reported in the New York Herald. The Roman Catholic papers, however, are skeptical. Says The Catholic Standard and Times (Philadelphia, January 25) :

"It is amazing to find such a paper as the New York Herald so lost to decency as to take seriously the ravings of a foulmonthed fraud like Dowie and give them the importance of eatchy headlines in its columns. The arch impostor last Sunday told a gathering of his dupes, away in Chicago, that a cardinal of the Roman Church is 'trembling on the verge' of secession, and he prayed that he might come out of Rome and go into 'Zion'-that is to say, into this fraud's joint-stock lace concern. If The Herald wants such stuff as this to give its young headline writers practise, why not send its reporters across to Bellevue or up to Sing Sing?

The "joint-stock lace concern," to which reference is here made, has already proved to be something of a thorn in Dowie's side, and involved him in a lawsuit with his brother-in-law. Samuel Stevenson. The charge made against Dowie was that he had exercised "undue influence" in making business agreements with his brother-in-law. A decision was rendered in favor of Stevenson, and a receiver for the Zion Lace Industries appointed; but the case was finally settled out of court. The story is best told in a despatch from Dowie to his Philadelphia representative, dated February 5:

"With rejoicing and gratitude to God the general overseer sends his Christian love to Zion in Philadelphia, and announces that the court has vindicated himself and Attorney Packard from all charges of fraud, and has dismissed the case of Stevenson against Dowie, it having been settled out of court. No receiver has been appointed, and the general overseer retains for Godand all Zion the control of the Zion Lace Industries. 'Thy God reigneth, O Zion! Hallelujah!' Give this out.

"JOHN ALEXANDER DOWIE,"

What is the Money Value of a Sermon ?-Arbitration came into play in a somewhat singular manner in Norfolk. Va., a few days ago, and not only brought about an anicable settlement between the contesting parties, but established an interesting commercial precedent as well. Says the Cleveland Plain Dealer :

"It appears that Pastor W. P. Hinds, of Portsmouth, recently lost a valise containing 202 manuscript sermons and an annotated Bible, the property being in the hands of the Norfolk and Western railway when the loss occurred. Mr. Hinds wanted the corporation to pay him \$1,060 as compensatory damages. The company, while admitting the loss, demurred to the amount, and wisely suggested that the matter be arbitrated by a board of elergymen. Mr. Hinds agreed to this and selected a brother Baptist as his representative, while the company chose a Methodist. Then these two came together and settled on a Baptist for the third indee.

"For nine hours the arbitrators wrestled over the value of the sermons, and then they finally agreed that the sum of \$250 was sufficient to compensate Mr. Hinds for his loss. It is true that this is but \$1.24 per sermon, but of course they were all secondhand, and the market value of a second-hand sermon is not easy to establish. That the price is a fair one is guaranteed by the character of the arbitration board, and by the fact that Mr. Hinds accepted the verdict without a murmur.

The arbitrators, remarks the Indianapolis Journal, "evidently attached no weight to the fact that the lost sermons probably had a sentimental value to the person who had written them, some thing akin to that of family pictures, berlooms, or love-letters. From this point of view they were worth a great deal more to their owner than they were to anybody else, but the board could not consider wounded feelings. Perhaps if each of the arbitrators had once lost a satchel full of his own sermons they might have taken a different view of the case, yet it is probably better that the award should have been free from sentimental considerations."

# THE HINDU COUNTERPART OF THE

URING recent years the Vedns, the sacred books of ancient India, have occupied the attention of many European scholars. While the age of these remarkable writings has not been determined with any degree of exactness, they have nevertheless been made to yield a flood of valuable information on the origins of Asiatic religions, M. V. Henry, in a paper in the Revue (Paris), seeks to throw some new light on the "Gods of Brahmanism," and on the development of the Hindu "Trimurti," or Trinity-Brahma, the supreme god, the creator; Vishnu, the tutelary preserver; Siva, the implacable destroyer. The worship of this triad of gods, he declares, has grown up out of a system of pautheism that existed for many centuries, and that included the worship of Dyaus, the god of heaven; Prithivi, the god of earth: Sourva, the god of sun: Oushas, the god of morning-dawn; Vata, the god of wind; Agni, "the celestial fire brought to men"; Indra, "the warrior conquering the waters"; Roudra, "the dispenser of calamities and favors with arrows that reach the ends of the earth"; and many other deities. In the ancient days of Hindu religion every person was free to select a god of his own, since there were no actual dogmas recognized by all. Brahma, the unique god, was adored by only a few privileged worshipers, and was unknown to the masses. M. Henry continues:

"This state of affairs was dangerous not only to religion, but also to the privileges of the sacerdotal caste afready threatened by the spread of Buddhist tenets. It was therefore felt necessary to bring all the sects together. The Brahmans probably took the initiative. To their impersonal Brahman they added the other two gods, Vishnu and Siva, thus creating the mystic "Trimurti' out of the elements of this barbarian iconography."

Many popular superstitions are associated with Vishnu, the tutelary god. He was held to be a midget, who vanquished the demons in their war against the gods. Krishna ("the Black") was considered an "avatar," or reincarnation of Vishnu. To the cult of Siva, the second person of the trinity, is due the propagation of sortery and black magic so common in India. Of the origin of the word "Braham a" M. Henry says."

"In the language of the Vedas and even later on 'brahma' is only a common name. The most ancient documents of India use this word both as meaning religious incantations and the priest who dispensed the incantations. The two meanings of the word existed until quite recently. In those days Brahma was not recognized as a god. But in the conception of the Vedas everything used in the service of the gods became god; the sacrifice was god, the priest was god, the objects of the cult were gods."

In time Brahma, the abstract God, became Brahma, the unique God. But the masses in India know Brahma only as a name, and they worship Vishnu and Siva. In conclusion M. Henry says:

"The three great divinities of India have been brought together by three religious currents, all emanating from different sources. The Vishau cult did not worship Siva, and the Siva cult ignored Vishau, and neither knew Brahma. The ninky is in reality fictitious, and was called into being artificially to serve the formula, "Creator, Preserver, Destroyer." In the Christian Trimity, the Son and the Holy Ghost issue from the Father. In the Brahman "Trimurti," on the contrary, Brahman predominates the two acolytes, who formerly were independent of him and of each other."—Translation made for The LITERARY DISEST.

# THE TWENTIETH-CENTURY OUTLOOK FOR THEOLOGY.

THERE is a tendency among a certain class of religious thinkers to belittle theology, and it has often been contended that the theologien is ascrious obstacle to the advance of true religion. The essential thing, we are told, is to get back to Christ and to tollow his example, ignoring the various systems of theology over which men have wrangled. Against this point

of view a protest is entered by Principal George M. Grant, of Oneen's University, Kingston, Canada, who declares that all such thinking is based primarily upon "conceit," since it presupposes the idea that "all previous generations have been fools" and that "wisdom dwells with the present generation, aud only with a select few of this select generation." "Theology," observes Principal Grant. "was once denomi-

PRINCIPAL GEORGE M. GRANT.

nated the 'queen of the sciences,' and it may claim the title again before the century closes." Even a limited knowledge of history is sufficient to teach us "how wise and noble were the great theologians of the past, and how indispensable their work was to the progress of humanity and the life of religion."

Selecting Paul, Athanasius, Angustine, Luther, and Calvin as the five supreme types of the theologian in history, Principal Grant proceeds to consider the logical development of their work in our own time and age. He says (writing in *The American Journal of Theology*, Chinego, January);

"It takes time to weave new principles into the warp and woof of humanity. The Reformation has been doing its work of the manity. The Reformation has been doing its work that intudions lines in which the free spirit secks to realize itself; in physical, elemical, and biological science; in speculation, history, and criticism; in politics, economics, and ethics; in comparative religion, in art, and in every department in which man seeks for the true, the good, or the beautiful. Much has been done. The materials have been gathered for a far wider theological synthesis than any that thas every yet been attempted asynthesis in which no spiritual treasure which has been garanceed by the total of previous generations will be lost, but in which a wider and grander view of the universe and the purpose of God will be given to the deligitude vision of the lovers of trath.

"The Reformation has not yet done its work either in Burgor or America. It was arrested by violeut opposition from without and a consequent reaction from within, needed probably to ceaserve the advance which had been made. But the opposing forces seem to be now wellnigh exhausted, and the churches of other Reformation, if only they have the courage of faith with the has too often been lacking, are at length free to carry out the principles of the Reformation and to regenerate society with the

spiritual force which always flows from a new appreciation of Christ and the Bible. This includes a franker recognition and a wider interpretation than were possible in the sixteening or seventeenth century of the rights of the Word of God and the rights of the human spirit."

The truer perspective of history that our age has won, continues Principal Grunt, so far from militating against the truth of theology, has but ministered to it. Indeed, one writer has pronounced the historical spirit to be the special charirma which God has given to the modern church. The present work of investigation and criticism must go on, until everything which can be shaken is taken out of the way or put in its proper place, and until firm common ground, on which all can stand securely, has been reached. Principal Grant assay further

"As to the character of this common ground, or the essence of Christianity, we shall be guided by the Christian consciousness of nineteen centuries, common to all the churches, and which has proved their saving salt against the various forms of error which have blended with their truth; namely, that Jesus, the founder of the perfect spiritual religion, is the Christ promised in the Old Testament, and that he belongs to a higher order of being than the merely human, and is, in a pnique sense, one with God the The philosophy of evolution, which now holds the field, is unwilling to accept such a view of Jesus, . . . It is flushed with victories and unwilling to acknowledge that its solvents may not be applied to all the mysteries with which we are surrounded. When it becomes somewhat older and more sober. then, through that fidelity to facts from which it has arisen, it will become convinced that Jesus can not be interpreted on the supposition that he was merely man, and it will have no more difficulty in accepting the apostolic interpretation of his person than it now has in admitting the distinction between the inorgame and the organic, between the plant and the animal, and between the animal and man.

The twentieth-century theological synthesis, concludes the writer, must inevitably grow out of a "Christocentric" position, and from this position he anticipates the two following great results:

"First, such an increase of spiritual unity as shall lead to organic union. Whether a metaphysic of the person of Christ shall continue to be regarded as essential, or whether the future church shall be content with the summary of facts recorded in the socalled Apostles' Creed, it would be premature to say; but manifestly the Quadrilateral formulated by the Lambeth Convocation of Bishops as a basis of church union will have to be set aside. Three of its articles have, indeed, been informally accepted, almost without thought or question, tho the non-Episcopal churches have hesitated about the fourth. But why should the creeds of Nicæa, Ephesus, Chalcedon, and Constantinople be put on the same level with the spiritual forces from which they originated? Are not those creeds simply results of the spiritual forces which originated from the great fact of the person of Christ? And why should the creeds of the fourth and fifth centuries be accepted and all subsequent creeds and confessions be rejected? The truth is that we know little of the early centuries and of the unchristian spirit in which the assembled bishops often acted. If we knew more, we should put the Westminster Assembly far above even the Nicene Council.

"Secondly, that the great churches of the Reformation will, as preliminary to organic union, rewrite their confessions, adapt them to our own time, and find out the extent of the common ground on which Christians now stand. What is required in this work is not the elimination of phrases and chapters, or the addition of supplementary articles and understandings, but testimonies of the church's faith, written from the new point of view which we all occupy. The organizing principle of the twentiethcentury confession will be, not the sovereignty, but the fatherhood of God; not His secret purpose, but His revealed will, that all men should be saved and come to the knowledge of the truth. This central revelation of God will dominate the view taken of man's nature, place, and duty. It will be recognized that love is mightier than, because inclusive of, faith; that the note of every true church must be hope; and that every work by which man is benefited is Christian work."

# DOES THE CATHOLIC CHURCH FORBID THE USE OF THE BIBLE?

A MONG Protestants 1 is generally believed that the authorities of the Roman Catholic Church are antagonistic to the use of the Scriptures in the vernacular, by the laity, and this is often vigorously denied by the adherents of that church. What is practically official information on this vesed question is to be found in a pronounced organ of that church, the Markische Kir. henhäuft, which says as follows:

"It has been charged against the Catholic Church that she denies to the faithful the use of God's Word and that she is exceedingly anxious to prevent copies of the Scriptures from falling into the hands of her members, lest by the reading of the Bible the Catholic laity might discover a difference between the teachings of the Book and of the church. In this way the term 'forbidding the Bible in the Catholic Church' has become almost a technical expression. It is true that the reading of the Scriptures in the vernacular has not been allowed to the laity unconditionally, but only under certain fixed limitations. This order is the ontcome of the experience of centuries, which has gradually resulted in a certain discipline in the matter. Therefore, in accordance with the constitution of Leo XIII. of January 25, 1897, under a penalty to be determined by the bishop, and as a great sin, it is forbidden to the average Catholic to read or to have in his possession any edition or copy of the Scriptures in a translation, even if this translation has been done by members of the Catholic Church, unless this work has had the express approval of the Holy Sec, or has also certain comments of a proper kind, and unless the bishop has given consent to its being printed. Hence only such Bibles in modern languages are alowed as have the approval of the Vatican, in case of editions without comments; and in case notes or explanations are added, these must have the authority of the bishop. In the same way are forbidden all editions and translations made by non-Catholics, especially those of the so-called Bible societies, whose publications are denied to the faithful under the severest penalties. Only those Catholics who are engaged in theological and Biblical studies are allowed to use such translations and editions, and to these only if neither in the introduction nor in the commentaries the doctrines of the Catholic Church are assailed. Aud in general, it is the duty of a good Catholic, before he begins upon the general reading of the Scriptures, to consult with his spiritual father and in conjunction with him make selections for reading. If the priest fears that the promiscuous reading of the Scriptures will harm his members, he has the right to curtail this privilege or even to deny it altogether.

"The views of the Profestants are entirely different on this subject, for they consider the right of reading the Bible something that may not be denied them, and that every Christian has a right to sear the Scriptures. But this is a mistake. For the right to sear the heaving the right of the right of the erence which the church entertains toward it too deep, to permit its abuse, which would surely result, as history has demonstrated, if the church should cease to esercise due caution in ditain model for This Literate Project.

#### FOREIGN TOPICS.

### THE COMING OF AGE OF THE KING OF

"THERE seems to be a misconception abroad as to what is to take place on May 17 next, when the young King of

Spain comes of age, and ascends the throne under the Constitution of 1876. That was made by the first parliament of his father's reign directly after the restoration of the Bourbons. There is no coronation ceremony in Spain. The young King Alfonso XIII, will simply go in state to the Cortes to take his oath on the crucifix and the Gospel to observe and carry out the constitution of the monarchy. Royal festivities and popular

celebrations will afterward take place in Madrid, extending over a fortinght."

The above paragraph from the London Standard may well precede the following editorial utterances of the Independence Belge (Brussels). a Liberal-lindependent paper:

"On the eve of Alfonso XIII.'s advent to the throne. Spain finds hered! involved in internal difficulties of such gravity that all the anonarchical parties have deemed it their duly to sustain at any cost the cabinet upon which will devolve the duly of inaugurating the new reign. This state of affairs was brought about by mutual concessions. The Conservatives promised not to play into the hands of the dis-

affected by attacking the cabinet. Señor Sagasta, on his part, refrained from effecting the reforms demanded in his platform. It is true that Señor Sagasta did not formally agree to such a

This commentator next considers the resistance which Senfor Sugasta is in a position to offer the Conservatives. He has a respectable majority in the Chamber, but it is factious, containing elements that would support any government carring to planate it. We are fur-

ther informed:

"Señor Sagasta will find himself tricked by his opponents in the end, and the concessions he has made to the Conservatives and the Clericals, concessions which have cost him the support of the Democtails groups, will not save his Government from a downfall that is felt to be near, . . . It is said the Cortes will be subpended at the end of March in order that the Sagasta enhine may be at least octain of retaining power until the young Kington accommodating enough to be the missier carry out this plan.

As for the young king himself, his personality is the subject

KING ALFONSO XIII. AS A LAD WITH HIS MOTHER AND SISTERS.

of comment and speculation all over Europe. The following, from the Hamburger Nachrichten, is typical:

"Nouvilustanding the youth of Alfonso XIII., the question of his marriage has been much discussed, The future Queen of Spain must, naturally, be Roman Culbolic. In this counsection French and Austrian princesses are named, altho an Austrian marriage would be unpopular in Spain. The popular voice would be for the Princess Louise of Orleans, a younger sister of the Queen of Portugal."

The Spanish newspapers of all shades of opinion are discontented with the situation. The Patrix, a nostructionist organ edited by an irreconcilable member of the Cortes, denomnces all in office. The Pairs, a Republican paper, crics out against the decay of Span. The Herathe, a liberal paper, severely criticizes the Government because it pays no attention to the labor question. It calls intention to the perilous activities of the Carlists and Republicans, and it calls for a change of ministry. The attitude of the Epicar suggests that the Sagasta ministry has reason to fear that it has lost the confidence of the court.— Translations made for The LIBERANY DIRECT

Germany's "Rights" in the Isthmian Canal.—
"The absence of certain signatures to the canal treaty is greatly
to be regretted, for other Powers are concerned, "says the Frankfurter Zeitung. "Among them is Germany":

"It is possible that other Powers may go to war with England, while the United States remains neutral. The most desirable thing of all would be the guaranty of the neutrality of the canal through the signature of as many Powers as possible. In that event the neutrality of the canal during a Germani-Prench, or Russian-English, war would be complete. In the absence of any treaty of this kind, a third Power has nothing it can depend upon. Everything depends upon the pleasure of the dominant United States."

The obligations of the treaty subsist only between England and the United States, observes the Vossische Zeitung (Borlin),

for those Powers have "overlooked" the occasion to have the "signatures of others".

"Hence responsibilities are not assumed by the other Powers, Hence, too, they lose their rights. As long as England interposes no objection, the United States may use the canal against a third Power in any way it pleases. England may do likewise if the United States allows it. That, for other nations, is a disadvantageous state of affairs. But even for the two contrading Powers the neutrality stipulations thereby lose all value. But had other Powers appended signatures to the treaty, the obligation of neutrality would be fulfilled, because neutrals would be in a position to enforce it. As it is, only these two Powers have made a treaty, and it lapses if they go to war. Hence England can blockade the canal only so long as her naval supremency endures, while the United States may never be driven from its commanding position on the land."

A somewhat different tone is taken by the Vienna Fremdenblatt, which says that even England's right to figure in the treaty is "academic rather than real." It says that the building of the canal will be a great benefit to Europe owing to the international community of interest. It notes, moreover, that the United States is paying for the canal—Translations made for TURL LITERARY DRIEST.

#### DR. KUYPER AND HIS RECENT MISSION.

THE association of the name of the Dutch premier, Dr. A. Kuyper, with the movement toward intervention in the Boer war, as well as his mysterious visit to London, has caused a flood of comment concerning his personality in the European

press. Says The St. James's Gazette (London):

DR. A. KUYPER

and given to the world more than a hundred literary publications of all sizes and sorts. He is probably the most all-round Dutchman living, and, whatever he did come to London for, we may be sure that one thing certainly did not bring him, and that is a mere glimpse of the Old Masters."

It seems that until recently there was no premier in Holland, for while Dr. Kuyper was the dominant force in the cabinet he was not its lead in the continental European sense. So declares the Independance Beige (Brussels), it any rate, which notes that Dutch cabinets have never before recognized one member as the head of the Government. Hence, it points out, Dr. Kuyper's position is unique. As for his actifude toward the Borst. Journal des Debats (Paris) thinks it will disappoint the Dutch public:

"His policy in the South African affair is the only reasonable one, the only one that necessity permits, but that will not mend

matters. It has been none the less a deception. Not only the anti-revolutionists, but many pro-Boer liberals believed that Dr. Kuyper would begin a policy of effective intervention and of resistance to England."

But Dutch papers do not bear out this view. The Dagblad, one of the leading newspapers at The Hague, dwells upon the commercial advantages of remaining on good terms with England, and denounces the proposed boycott of Great Britain absund. The Neurer Katterdansche Courant, which has been accused of misrepresenting facts to the prejudice of England, professes to be annued at allegations that it is in the pay of the Boer agents. The Handichland (Amsterdam) says:

"The statement that Dr. Kuyper has had any talk with the Boer envoys that would justify belief of an abandonment of the two Boer conditions of full independence and annexty for the Cape Colonists is unfounded. Such stories are made out of whole cloth."—I runstation made for The LITERARY DIGEST.

#### EUROPEAN MISCONCEPTIONS OF PRINCE HENRY'S VISIT.

I The becomes more and more manifest, from the comments of continental European newspapers on Prince Henry's trip to the United States, that the position of this country in the affair is wholly misanderstood. For instance, the Temps (Parss) says the German Emperor is making, "very significant advances to the United States," an observation which it uses to illustrate the tendency among European Powers to seek "new alliances." It adds that the visit portends a great triumph for Emperor William's "policy." Furthermore, this paper rays:

"Mr. Rooseveli is a man and a father. He has been touched where he is sus-ceptible. He is flattered by a proposition which treats as a princess of the blood royal a young person upon whom the Constitution of the United States confers no rank and no hierarchical position. This proceeding has met with complete success. William was bent on striking while the iron is hot, He sent his brother to Washington."

The Russian newspapers, especially the Norvoye Vremya, an official paper, warn the Germana sgainst forming delusive hopes of an alliance as a result of Prince Henry's visit. The English papers take the same tone. Both the London Times and The St. James's Guzette call attention to Senator Depew's interview, in which he is made to say 'that Prince Henry was ecnning to

BLOCKING THE WAY,

"I'm in a hurry to get into the compartment where the indy is, and outre in my way."

-Notecolde
"Yes, and I mean to stay in your way."

the States mainly for the purpose of sounding the President and the Cabinet, at the direction of the German Emperor, on the Monroe Doctrine." The same papers give color to the idea that the Emperor "is utilizing the present opportunity to impress upon Europe that a strong bond of friendship exists between the two countries that would aid Germany in trouble anywhere." The German newspapers retort in kind, especially the Hamburger Nuchrickten, which says:

"That the visit of Prince Heary to the United States is not pleasing to the English will be easily understood. Nor will there be any difficulty in perceiving precisely why they cast a sinister light on the episode. We are not ourselves overpleased at the fashion in which this visit has been led up to and is being carried out. .. We are opposed to decorative politics, which seems, however, to be greatly affected by the new school. But this does not prevent as from condemning the way in which the against Emperor William personally."—Translations under for Title Literakey Doest.

# RUSSIA AND THE "CRUMBLING" TRIPLE

M UCH satisfaction is expressed in the Russian press at the evidence of discord in the Triple Alliance and the signs of its dissolution. The growing friendship between Italy and France, the recent Austrian warning to Germany in connection with the latter's new tariff, and Count von Billow's defiant statement in the Reichstag that the Alliance was no longer a necessity to Germany, as it once was, but only a convenience—these and other facts are held to foreshadow the collapse of the powerful combination which opposed the Franco-Russian dual alliance. And what neat? it is asked. Why should not Italy join the latter combination? The St. Petershurg \*Veventi\* reviews the history of the Triple Alliance, and concludes that the reasons for its existence are practically gone. It says:

"Tho the Triple Alliance has been renewed several times, the operation has been more and more difficult each time, for exter nal and internal causes have tended to weaken it. Russia and Austria have reached an understanding as to the Balkan states, originally a source of danger, while France and Italy have come together in the Mediterraneau Further Austria has been dissatisfied with Germany's policy in Turkey, and the old rivalry, put aside under Bismarck, is again asserting itself. In a word, the Triple Alliance is shaken to its foundations. Should it vanish from the political scene, no serious disturbances will follow in Europe, for the combination has outlived its object and useful-The conditions which existed in the early eighties can not be restored; history does not repeat itself, the analogous phenomena do recur. No one will lament the extinction of the Alliance, for it has been the chief cause of the militarism which has oppressed Europe, and of all the crises of the last few years."

What will be the effect on the dual alliance? asks Novesti, and it answers that the conditions which brought that union into existence will not have been changed. Still, it says, a new political era will undoubtedly be opened in Europe. The necessity for hard-and-fast alliances will cease to exist, and each Power will regain the freedom to enter into temporary arrangements for special purposes. This situation will not be as spectacular, but it will be more wholesome than that which has lasted for so many years. The Newyer Vremya thinks that England and Germany will try to effect an understanding, in spite of recent unpleasantness, and moralizes as follows on the alliance resting on compromises and makeshift surrements!

"We are now witnessing the reorganization of a diplomatic combination created by Binmarck himself. The Triple Alliance, which has never been put to the test and has suffered no sort of strain, is now going to pieces around a profound and genapeace. Italy is turning away from it, and when the king deallines to sign a protocol renewing the agreement the whole nation will be on his side. In Austria and Hingary it is officially stated that the dual monarchy will no longer play the part of a meek and humble political lamb, and will not renew a political relationship which does not accord with her economic interests. Yet the union, which has benefited Germany alone, has managed to continue in existence for a number of years. Russla will not enter combinations of this kind—with England or any other Power.—Translations made, for Tis Littrakay Dicass.

#### ENGLAND'S DEFIANCE OF THE WORLD.

THE English newspapers have greeted the movement for intervention on behalf of the Boers with a challenge to the whole world, of which the tone is adequately indicated by this extract from the London St. James's Gazette:

This attitude is characteristic, also, of the London Times in its comment upon the proposal for intervention made in the French Chamber of Deputies and the rejection of that proposal by M. Delcassé, the French Minister of Foreign Affairs:

"M. Delcassé might perhaps have shown rather less coldness in discussing a subject which was made the occasion for a shower of foul calumnies against a friendly state, but at all events be himself spoke and acted with propriety. M. Berry and his friends argued with much pathos and little sense that France owed it to herself, and to that traditional love of humanity which she has so often and so conspicuously displayed in her invasions of the territories of her neighbors, to offer her mediation between England and the nominal governments of the late Boer states, The Secretary for Foreign Affairs coldly pointed out to them what the consequences of such an offer must be. The late President McKinley made triendly inquiries very early in the struggle how such a proposal was likely to be accepted, and the reply he received was quite unmistakable. If France or any other Power were, in the face of that reply, to insist on pressing mediation or interference of any kind upon us, that Power would do so with full knowledge that her advances would be met by a clear and forcible diplomatic rebuff. Unless this hypothetical Power were then prepared to cut the leck she had tendered to us she must, as M. Delcassé most appositely observed, seek to enforce her mediation. That, he went on to tell the Chamber again with perfect truth, 'inevitably meant war,'

The English newspapers point out that the British empire is in a position to continue the struggle Indefinitely. "It reast only with the intractable element to submit," says the London Standard, "or—to be overcome." But The Quarterly Review (London), in an article on "The War and its Lessons," says.

"The disquieting feature in the situation is that, even if the Boers have only ten thousand men still in the field, it must take, at the present rate of capture, from one to two years more before they are disposed of. . . . No doubt if time and money were of no importance—if it were not the case that British interests throughout the world are suffering, because, with the whole of our available fighting force in South Africa, we dare not risk such a disaster as befell the Athenian expedition to Syracus—we might be content with a policy of leisurely but sure attrition. The summer of th

#### THE COAL SCARE IN ENGLAND.

THE appointment of a commission to look into the coal supply of England has aroused the press of that country to a new sense of peril. The Speaker (London) says:

"We can, if absolutely necessary for our existence, forbid the new separation of coal save for hunker purposes, the that is to export the exportance of the save separation of exportance of the save separation of the coal. It is not always possible to extract all the mining of the coal. It is not always possible to extract all the coal in a given area, becomes that would make work nor coal in a given area, becomes that would make work nor coal countries. But the general adoption of coal-cutting machinery would be an innuinced bown, and much insight be sufficient to the save formidable.

However, says this paper, some substitute for the present mode of consuming coal may eliminate all peril from the situation. The Saturday Review (London) says:

"The steam coal produced from the collieries of South Wales, and to a less extent in the North of England, comes under the head of 'the more valuable kinds,' It excels in purity and in heating power and has also the advantage of being smokeless, or nearly so. In time of war with another naval power the ships supplied with smokeless coal would have un advantage; because when below the horizon the fleet would not be visible, while slaps giving off volumes of smoke would be visible from 'the erow's nest' long before the slaps themselves had come into view. The heating power as well as the smokeless character of the coal is mainly dependent on the high proportion of carbon. This is characteristic of Welsh steam coal and gives it its high value for naval purposes. Hence its great demand by foreign countries for their respective navies, as well as for our own mereantile marine, this also explains the enormous export trade from Cardiff and Barry and the adjoining ports. . . ing the great importance of this special coal to the Royal navy. and the fact that it is by no means inexhaustible, to inquire into its future possibilities is a subject of such importance as to justify the appointment of a commission to report on it alone.

If the English coal supply will last only another century or so, according to *The Spectator* (London), "will that mean that our industrial death-warrant is signed?" It thus answers its own question:

"We can see no sufficient reason for supposing so. External supplies would not mean foreign supplies. When the end of our own stores was within measurable distance we should have to fall back on the kindred and friendly American republic, and on the great fields happily in the possession of our brethren and fellow subjects of the Canadian Dominion. That, very likely, might involve important industrial adjistments."

# THE STRUGGLE BETWEEN LORD ROSEBERY AND SIR HENRY CAMPBELL-BANNERMAN.

THE opening of Parliament has rendered acute the tension between the two divisions of the Liberal party in England. One side inclines to Lord Rosehery and the other adheres to the Opposition leader in the House of Commons, Sir Henry Campbell-Bannerman, It may be well to begin with a French view of this complication—that of the Paris Temps—as being detached:

"The situation created in the English Liberal party continues to be a decidedly delicate one. To understand the state of mind of Sir Henry Campbell-Bannerman and of the majority of the opposition it is necessary to bear all the facts in mind. To begin with, Lord Rosebery is officially no longer a Liberal. He began by divesting himself of his functions as leader of the party. Subsequently he renounced his party allegiance itself. He took difficult part to play, . . . Sir tierny Campbell-Bannerman, with his smiting and astute good-buntor, his strong common sense, his coolies, his simple and healthy faith in the principles of Liber-

alism, his uncompromising fidelity to the Gladstonian traditions, has so far remained steadfast in a very discouraging situation."

After pointing out that Sir Henry Campbell-Bunierman remains faithful to Home Rule, whereas Lord Rosebery has abandoned it, that the two disagree regarding the separation of church and state and the ab-dition of the House of Lords, and upon the proposition that the Liberal party "wipe everything off its slate," the French paper notes that the two men do agree regarding the Boer war. This brings as to English editorial opinion. The Pairy New (London), the Liberal party, nointelly alludes to Sir Henry Campbell-Bannerman as "the leader of the Liberal party." It has this to say.

While expressing a cordial readiness to act with Lord Rosebery in the furtherance of Liberal principles. Sir Henry drily observed that some rhetorical phrases in the Chesterfield speech had been 'unhappily employed,' Lord Rosebery can not complain of the expression, for it is his own. The reference is, of course, to the cleaning of slates. The suggestion that this process, of which we are all getting a little tired, should be performed was hailed with delight by all the defenders of privilege and monopoly in the Tory press. Lord Rosebery should not forget that there are a good many people who have not the slightest objection to the definite continuance of this war. They are too rich to feel the taxation, they are too selfish to care for the bloodshed, and they rejoice in the effective postponement of all reform . If Lord Rosebery will not act with the Liberal party the Liberal party must act without him. Their duty is plain, and it was declared by Sir Henry Campbell-Bannerman,"

The Conservative papers show a tendency to consider Sir Henry a "pro-Boer."—Translation made for The LITERARY DIGEST.

#### POINTS OF VIEW.

REVOLUTION IN PARAGUAY.—The crisis at Assumption, growing unt of the presidential election, became acute on lannary of this year. President Emilio Aceval was locked up. Tab Heistmanter Gazette (London) dismisses the internal with elected South American revolution. It seems that order is now restored. Vice-President Cabalters assumed the government and Selfor Chullerton Rios, is now a candidate for the presidency.

PEACE IN HOLLAND.-Everything in the realm of Queen Withelmina is quiet, according to the Independence Helge (Brussels), and it seems that

the young Prince Consort is to make a tour of the Dutch colonial

DONNESSIONS

Baving extended from the nietal industry to the textile industry. The London Timers inclines to think; it is all due to M. de Witte's too active economic policy.

VINIQUILA AND GERMANY.—Altho the naval forces in Venezuelan waters are not active, the newappers in Germany devote as much attention to the subject of the crisis there as ever. "We wish and hope that the differences belower Venezuelan and Germany will soon be settled," says difference showers of the difference of the says of the difference of the diffe

#### NOTABLE BOOKS OF THE DAY.

#### A CROMWELLIAN ROMANCE.

THE LION'S WHELP, A Story of Cromwell's Time. By Amelia E. Barr. Illustrated. Cloth, 5 x 7 in., 385 pp. Price, \$1. 90. Dodd, Mead & Co.

OR two or three years past, Cromwell has occupied large space in American magazine literature, and three notable histories of him have appeared-two by Englishmen and one by Mr. Roosevelt, our This, coupled with the present rage for historic romances, has caused literary observers to regard it as only a question of time when a romance of the Cromwellian period would be forthcoming. The

AMELIA E. BANK.

difficulty of the theme, doubtless, has deterred more than one cautious penfor whoever would handle the baffling and self-contradictory character of Cromwell must depend largely on the creative processes going on in his own subconscious mind. The skeleton facts of history, bloody tho they

be, furnish poor nourishment to inspiration. Mrs. Amelia E. Barr has turned out a strong piece of work. About

the same time Edna Lvall takes up the same subject in her "In Spite of All." Both writers have chosen a similar ground-plan, the picturing of the times through the complications that arise between two families, lifelong friends, the one Paritan, the

other Cavalier.

Mrs. Barr alone brings Cromwell to the front and into intimate relations with the reader. She thus achieves the more dramatic results, and in her hands Cromwell proves no puppet. Upon the facts of his life, as well as his own words, she lays a firm grip and constructs a man that lives and breathes and acts. We see him issue friendly orders, bally, rage and pray by turns, aspire and plot, interview spies and act upon their information; we even see him indite a letter to Cardinal Mazarin, and in its cunning, fearless force, and diplomacy we feel like bearing witness that it was the real Cromwell who did it. After the toil and moil, the alternate treatying and brow-beating of the day is over, we catch glimpses of the mere man alone with his faithful wife, to whom he half murmurs, half weeps out his sore troubles and distrust of those around him. Then there are other moments when we see him walk the floor like a fond mother, bearing in his arms the spent form of his dying and favorite daughter, Mary. At such times we find it hard to reconcile with the man, the ruthless warrior who knew no mercy at Drogheda and Wexford and Ross!

Perhaps, Indeed, the lack of real insight into the strange, dark, re-ligions fanaticism of Cromwell is the weakest point in Mrs. Barr's

picture.

One display the property of the times are capital. We feel the half jetours, half contempt, of the women of the day for the haldes of the
Cromwell family after their rise to power. Mrs. Barr assumes entire
mpartiality, but the assumption in futile. We feel her sympathies as
title of nature appears to work against her, for her royalist heroine,
Naultala De Wycke, is far richer of soul than her Puritan midden, Jane
prig in petitionats. There is a double low-story. A number of historie
agures crowd the stage, and they are on the whole creditably handled.

#### A QUEEN AND THE "LITTLE PEOPLE."

A REAL QUEEN'S FAIRY TALES. By Carmen Sylva (Elizabeth, Queen of Rumsnia). Cloth, 8 x 516 in., 229 pp. Davis & Co., Chicago.

RITICISM is disarmed by these exquisite fairy tales by a real, live queen. There are eleven of them, and then there is a "truly true" story, where the serene and lovely consort of the King of Rumania tells why she selected Carmen Sylva as her nom de plume, This you know is autobiographical, but just as in the delicate woof of fancy and invention of the fairy tales there breathes a substantial feeling of the author's personality through the naive but genuine insinuation of principle, high ideals, and noble virtues; so in the artlessly personal account of her childish life there is the fairy atmosphere of the ethereal, beautiful, melodious pays des fees.

At the end she asks the children to tell her which of these tales they like the best. The grown-up children will be apt to tell her that they like this account of herself the best. Such a fascinating story it is of the little princess in the Castle on the Rhine surrounded by its glorious forest. There was no electricity in those days, few railways, and letters were brought by a mountain postman. When the wind would rise and make the oaks and beeches writhe and groan, the woodland child would, as she says, "tie my little hood over my brown hair, and, with my two big St. Bernard dogs by my side, I would race through the forest, avoiding all the beaten tracks, and listen to its voices : for the forest told me stories all the time. The forest sang the songs to me which I wrote down afterward at home, but which I never showed to any one. It was our secret-the woods and mine.

The little dryad elf, now that she sits upon a throne and has learned the awful lesson that came to her mother's heart in the loss of her one

child, Marie, has told for other children what the whispering woods and winds and flowers and birds, garrulously murmured to her small soul then, as they have murmured since. Not until she was thirty-five did she suffer anything to be printed, and then sought to veil her identity under some pseudonym. In German she was the Waldgesang, the Song of the Woods; and as she belonged to a Latin people, as Rumania's Queen, she turned it into Latin, and hence Carmen Sylva. She took a slight liberty with the grammar because Carmen Sylvæ did not sound like a real name.

Her account of the linden tree, which was her prime favorite, is a little idyll. She tells us, her gentle Majesty, that she was like the linden tree of her story. "As a child I al-

CARMEN SYLVA ways thought I was not as good as the others, and not so well loved,

because I was less lovable." Carmen Sylva is lovable. These fairy tales prove it. She is a poet,

Carmen Sylva is lovable. These fairy takes prove it. She is a post, a painter, a muscular and such a mother. She is a mother still, in the yearning of her heart for children. But she is the Queen, too, and a sery occupations and has done aforenous work before her eight-hocked breakfast with King Charles. The rest of the day is for her people, with the first breath of summer she flies from Bucharest to Castle Pelesch, the oryal children high up in the Carpathians, where the sur-relation of the control of the co

The woodcuts accompanying the exquisite stories are worthy of them. They are by Harold Nelson and A. Garth Jones. Miss Edith Hopekirk's translation is excellent and sympathetic, one feels assnred.

#### A STUDY OF PRIDE.

THE HOUSE WITH THE GREEN SHUTTERS. By George Douglas. Cloth shi a rhi in., 100 pp. Price, \$1.00. McClure, Phillips & Co.

"HAT "The House with the Green Shutters" should not have achieved a "great sale" success in this country is easily understood. It has none of the tawdry elements that make books pop-That it has not been more talked about is strange. Until lately

this book, that made so much of a stir among English critics, had received hardly more than a casual mention in any publication save the review column of the daily press

In all tragedy there is kinship, for tracedy deals with the fundamental things of human nature, and had the tragedy of "The House with the Green Shutters" been the work of a Russian, as it very well might have been, we may be pretty sure that more would have been said about it. Books may be brutal, revolting, unsavory, and if they are translations, we cry aloud "liow true!" and "How strong!" But we demand of the books that are written in our own tongue that decency be preserved, that tragedy be tempered with mercy, and, above all, that the "love interest" be present.

In the last two requisites Mr. Douglas has failed. "The House with the Green Shutters" is uncompromisingly grim, and there is no glimmer of the love interest. The dominant passion of the book is pride, the pride of a man in his own achievement, of a man who succeeds by the force of a will so strong that it becomes dynamic force. The interest of the book is fairly

divided between the father, John Gourlay, and the son, John Gourlay -the father, brute force without much intelligence; the json, morbid imagination without intellect. The father, a bully; the son, a coward. John Gourlay by sheer brute force has made himself master of all transporting business before the arrival of the railway in the small Scotch town where the story is laid. He is one of the great men of the town, and he has built himself a house of which he is so proud that the village gossips have it that he will haunt the house after his death. Friends he has none; he is too insolent and too brutal. His wife, whom

he bullies, is an irretrievable slattern. When the story opens he is at

the height of his prosperity. He is not clever enough to compete with modern business methods, and a man named Wilson little by little gets

from him his business. Meantime his son grows up, by turns a slinking coward and a braggart, morbidly alive to all external impressions, weak and nervous. Gourlay insists on sending him to the academy in a neighboring town, and afterward to the university, merely because his rival, Wilson, sends his son. Here young Gourlay learns to drink, and just as his father is at the end of his financial resources, is expelled. In just as his father is at the end of his financial resources, is expelled. In a quarrel between father and son, young Gourlay, who is drunk, kilb his father. His mother hides his crime, but his brain gives way under the strain, and he pissons himself. His mother, who is dying of cancer, and his sister, who is dying of consumption, also kill themselves. It would becent that Mr. Douglas could hardly escape melodrama with

It would seem that Mr. Douglas could hardly escape melodrama with such a plot; to the never oversteps the line for a moment. The story is ghastly and terrible; but its characters, even to the least, are real people, and the development of the plot, even to the final tragedy, seems as inevitable as fate. And as a psychological study young John Gourlay stands alone. Neither isk a book of merely one or two char-As a picture of the life of a little village the book is excellent.

#### BRITISH SEA-DOGS OF OLD.

TYPES OF NAVAL OFFICERS Drawn from the History of the British With some account of the conditions of naval warfare at the beginning of the eighteenth century, and of its subsequent develop-ment during the saft period. By A. T. Mahan, D.C. L. Ll., D., Captain Daised States Navy. Cloth. 5, 835, in 700 pp. With say partirable United States Navy Cloth, 55 x 854 in., 200 pp. With six portrasts Price, \$4.50, net. Little, Brown & Co.

"HE distinguished author of the important series of works tracing the development of sea power and its influence upon history. supplements in the present volume several of the authoritative treatises which precede it-especially his "Life of Nelson "-with narrative and anecdotal memoirs of six great British admirals, "whose personal characteristics and professional careers make them conspicuous examples of naval seaman "-of types, differing one from another, but all continually recurrent in naval history. The types selected are Lord Hawke, Lord Rodney, Earl Howe, Earl St. Vincent, Lord De Saunarez. and Lord Exmouth. Most of these have close points of contact with America, in some instances of marked historical interest. All, without exception (the author reminds us), were actors in the prolonged conflict that began in 1730, concerning the right of the ships of Great Britain and her colonies to frequent the seas bordering the American dominions of Spain- a conflict which, by gradual expansion, drew in the conthrent of Europe, from Russia to France, spread thence to the French possessions in India and North America, involved Spanish Havana in the Western Hemisphere, and Manila in the Eastern, and finally entailed the expulsion of France from our continent, the contest covering fortythree years.

The two younger men of this group, Sanmarez and Pellew, saw in the American Revolution the beginning of an active service which

lasted to the end of the Napoleonic wars, "the most continuous and gi-

Captain Mahan's pages the graver matters of history and criticism are pleasantly diversified, here and there, with characteristic anecdotes, personal and professional,

ALEKED T MARIAN

We read of the fine inconsistency of this same young mutmeer, in afterward compelling apology and restitution from Genoese officers who had taken from a British boat two Turkish slaves who had escaped from one of their galleys-altho he (a runaway houself) " was opposed to the abolition of the slave trade and the education of the lower orders,"-because subordination was "the true idol of his soul.

He wrote to a meritorious young officer who had stood high in his favor: "Sir-You having thought fit to take to yourself a wife, are to book for no further attentions from your humble servant. I. lervis." Yet he was himself married when he wrote.

He made it a rule to inspect the hospitals in person, and compelled a daily visit by a capitant, and by the surgeons of the ships from which the sick men were sent, thus keeping them at literally touch with their

officers. But, not to neglect discipline, he required the visiting captain to take along with him a "boxin's mate" with his heat"—"in case they should find that the patients do not conduct themselves properly and ordurly

orderly."
When the Duke of York, grandson of the reigning monarch and a
midshipman, held a reception on board Howe's ship, at which the capworder that he alone kept on his bat. But an able-bodied scamma
explained: "Why, where should he larn manners, seeing as how he
was never at so before?"

#### A SCHOLARLY WORK.

THE EXPOSITOR'S GREEK TESTAMENT Edited by W. Robertson Nicoll, M.A., J.L.D. Volume H. I. The Acts of the Apostles: by the Rev. R. J. Knowling, D.D., professor of New-Testament exegests. Kings-tollege, London, H. 8a, Suul's Epistle to the Romans; by the Rev. James Denney, D.D., professor of systematic and pastoral theology, Free Church College, Glasgow. HI. St. Paul's First Epistic to the III. St. Paul's First Epistle to the Corinthians; by the Rev. G. G. Findley, B.A., professor of biblical litcrature, exercis, and classics. Headingley College. Cloth, exclain. ou up. Dodd, Mead & Co.

T is somewhat curious that the present generation has not seen hitherto any adequate edition of the Greek Testament similar tothat edited by Dean Alford more than forty years ago. Of course, there have been difficulties in the way. Since Alford's time the whole

problem of textual criticism has become more definite, more detailed, and in a measure more complicated by the works of Tischendorf, Westcott and Hort, and more recently of Blass. It is rather disturbing to find the various shifts that have been made during the last thirty years as to the foundation eodex on which the text is to be founded. Tischendorf preferred the Sinaitic codex Ite discovered. Westcott and Hort reverted to the Vatican as their mainstay, while Blass is now contending for the various claims of the very curious editions and condensations made in the Codex Besse to constitute the nearest approach to the original text of the Gospels, Acts, and Epistles.

W. ROBERTSON NEOD !-

Besides the confusion as to the Courtesy of the Bookman (New York). texts there has been an advance in knowledge of Hellenistic drama and in the Roman constitutional history of the period associated mainly with the name of Professor Ramsay and with the Cultur-Geschichte of the time, summed up in the great work of Schürer. When to all this one adds that theology has been almost remade in Germany, under the influence of I'fleiderer and Ritschl. it is scarcely to be wondered at that ancient theologians have shrunk from producing an edition of the Greek Testament which would sum up all these lines of advance. All sides of New-Testament exegesis are represented in this handsome volume, which must become and remain authoritative for the expert student of the Testament for some time to

The present instalment contains the "Acts" treated by Professor Knowling of Kings College, London; "Romans," by Professor Denney : and "First Corinthians" by Professor Findley. It is quite natural that Dr. Nicoll should have selected British writers for his work, but the example of the International Critical Commentary ought to be followed, and American authors and editors applied to, so that the Expositor's Greek Testament may be used with equal confidence on both sides of the Atlantic. Still, theology like all other sciences is international, and if a piece of exegetical work is good it will be used on this side of the Atlantic no matter what its original provemence.

Coming to the story sections treated in this bulky yet handsome volume, Professor Knowling's treatment of the Acts is characterized by that system of compromise which is supposed to imply the safest, if it is not the highest, form of scholarship. On the whole, he is a disciple of Professor Ramsay as to the authorship and trustworthiness of a narrative which is attributed to St. Lake with some confidence. It is here that the last echoes of Tübingen are dying away in theological circles in Great Britain, and the fact that the Bible states a thing is nowadays not necessarily taken to prove that it is untrue. As regards the text, Professor Knowling is more daring, and on an average his comments on three bues of text fill a page of the book.

Professor Denney's Romans is equally detailed, but he has not attempted to reconstitute a new text, being in the main content with Westcott and Hort. The introduction is not by any means so thorough as that of the Acts. Altogether, his treatment, while adequate, is scarcely up to the level of the remaining two sections of the book, for Dr. Finding is as industrious and ingentous in his treatment of I. Corinas that of the Acts.

thians as Professor Knowling is with the Acts.

When completed there can be little doubt that it will remain for a long time the standard edition and commentary of the Greek New Testament

given before every sailor on every ship in Hampton Roads had heard of it. The effect was most remarkable on the oider sailors, many of whom had themselves experienced the punishment of the awent-box. Some of them wept from joy

"But the good results of this act of President Lincoln were not confined to the American navy. Great Britain, France, Germany, and other European countries keard that the sweat-last had been abolished in America as inhuman. One and all of these nations in turn fell into line, and to-day the aweat-box is not to be found on any vessel flying the flag of a civilized nation throughout the world."

Charut of Horseshorrt:

It's truly grand to have the Prince

Come to our Operee ; It's worth a lot to have the Prince Sit down where we can see; It's very fine to have the Prince

See all that he can see : But how the dickens and tombill Can we his Highness see,

If we've got no place to sit, And how can he ever see us If we are not where he can see us? Say

Say? What kind of a mix is it enyway?

Trembine-Oom ta-ra-ra-damfino Chorus:

In gleams and glints. Behold the Prince, Hia Royal Highness comes;

A gala night Palls on his sight Among the high lumtums. Give him a box.

Indignant Stockholders: Whose? Whose? Whose? Whose? Por mine I refuse.

What is all this row and rumpus, Like a racket down below? We have got to give this Teuton

Some kind of a toot, you know? Trombone-Oom ta-ra-ra-ra-ts. New York Sun.

# New Medicines.

Stuart's Dyspepsia Tablets are a discovery of great value to the medical profession and the public. They are an unfailing specific in all cases of dyspepsia and disordered digestion.

Almost everybody's digestion is disordered more or less, and the cor nest thing they do for it is to take some one of the many so-called blood purifiers. which in many cases are merely strong cathartics, Such things are not needed. If the organs are in a clogged condition, they need only a little help and they will right themselves. Cathartics icritate the sensitive finings of the stomach and bowels and often do more harm than good.

Purging is not what is needed. The thing to do is to put the food in a condition to be readily digested and assimilated. Stuart's Dyspepsia Tableta do this perfectly. They partly digest what is caten and give the stomach just the help it needs. They stimulate the secretion and excretion of the digestive fluids and relieve the congested condition of the glands and membranes. They put the whole digestive system in condition to do its work. When that is done you need take an more tablets, unless you out what does not agree with you. Then take one or two tablets-give them needed belp and you will have no trouble.

Its a common sense medicine and a common sense reatment and it will cure every time. Not only cure the disease but cure the rause. Goes about it in a

perfectly sensible and scientific way. We have testimonials amough to fill a book, but we dan't publish many of them. However

Mrs. E. M. Faith of Bird's Creek, Wis., says: "I have taken all the Tablets I got of you and they have done their work well in my case, for I feel like a different person altogether. I don't doubt if I had not gnt them I should have been at rest by this time.

"H. E. Willard, Onsiow, In., says: "Mr. White of Canton, was telling me of your Dyspepsia Tablets curing him of Dyspepsia from which he had suffered for eight years. As I am a sufferer myself I wish you to send me a puckage by return mail."

Phil Brooks, Detroit, Mich., says: "Your dyspepsia cure has worked wanders to my case I suffered for y, are from dyspepsia but am now entirely cured and enjoy life as I never have before. I gladly recomand thern

It will cost 50c, to find out just how much Stuart's Dyspepsia Tablets will help you. Try them-that's the less way to decide

All druggists sell them. A little book on stomach diseases will be mailed free by addressing F. A. Stuart Co., Marshall, Mich.

# Last Opportunity to Join The Washington Educational League

It gives us pleasure to state that our "Washington Educational League" offer of the two-volume full Russia, 20th Century Subscription Edition of the Standard Dictionary has been successful and we have received a large number of acceptances. As before stated this offer will close on Washington's Birthday, February 22. There will be doubtless many LITERARY DIGEST readers who will desire to accept the attractive terms, and we issue this final reminder in order that none of them may be disappointed, by postponing too long the sending of the coupon.

DELIVERED TO LITERARY DIGEST READERS FOR ONLY

THE REMAINDER IN EASY INSTALMENTS DOWN ONLY ABOUT 7c. a day

The Dictionary of preeminent value for every Business or Professional Man because it contains over 80,000 more words than any other dictionary in existence, its definitions are the work of more specialists than have been employed on any other dictionary, and because it is rich in new and exclusive features of immense value and usefulness.

The Funk & Wagnalls

#### STANDAR ICTIONARY

20th Century Subscription Edition

HE Dictionary which the late Queen of England ordered for the Royal Library at Windsor; in honor of which the President of France presented the publishers with a Sevres Vase; which received a decoration of honor from the Sultan of Turkey; which has been procured by nearly all the great rulers of Europe; which is the favorite authority in all the departments of the United States and the Canadian governments; which has been indorsed by all the important universities, and which has met with praise among men of every vocation and profession throughout the English-speaking world. Nearly half a million copies have been sold.

The New York Herald says: "It is admirable from every point of view. It is the most satisfactory and most complete dictionary yet printed."

# SIMPLE FACTS showing in a nut-shell a few of the special features that make this Dictionary indispensable in every office and home: : : : 1

250 EXPERT SPECIALISTS The work throughout of the world's leading specialists in all departments of knowledge. More experts than any other dictionary.

EASY TO CONSULT Common meanings given first, rarer ones and etymology last, making quick reference easy. The ideal dictionary for busy men.

SYNONYMS AND ANTONYMS Gives 125,000 Synonyms and Antonyms. No other dictionary gives Antonyms. A practical aid to correct English.

EXCLUSIVE FEATURES Of convenience, such as compounding, word grouping, capitalizing, syllabication features, help in the use of prepositions, etc. Prol. A. G. Wilkinson, U. S. Patent Office; "It is the most perfect dictionary ever made in any language."

# A STEADY WORKER

Coffee Works Slow But Sure.

Many people use coffee day after day without an idea of the serious work it does with nerves, stomach. howels, and sometimes with the eyes, heart and kidneys. Its work is done gradually, that is, the poison affects the nerve centres a little to-day and a little to morrow and so on, and finally the nerve cells are slowly broken down and then Nature begins the call

It is a safe proposition that if a man or woman has headaches, stomach trouble, or any such ailments come on at intervals, something is wrong with the food or drink, and this question should be investigated carefully, for health is the best capital anyone can possess and willfully breaking it down is a piece of childish

It is easy to leave off coffee if one will take Postur Food Coffee, properly made, for Postum has a delicious coffee flavor and a deep seal brown color which changes to a golden brown when cream is added, and it satisfies the coffee drinker without any of the bad effects of coffee; on the contrary, the result of using l'ostum is the rebuilding of the broken-down nerve centres by the food elements contained in it.

Postum is a pure food beverage made by scientific food makers and can be depended upon absolutely for its purity and the good results that follow its use.

To bring out the flavor and food value Postum must he boiled at least 15 minutes after the boiling begins.

# 1500 Dozen Ladies' Hand-Embroidered Handkerchiefs At Half Price.

(All perfect goods) They are made of fine, sheer Irish linen, in 34 beautiful patterns, including both scalloped

edge and hand-hemstitched goods. Each handkerchief shows attractive handembroidered corner designs, combined with open-work. All priced at

#### TOPICS OF THE DAY.

#### INVESTIGATING THE BIG BALLBOAD MERGER

'HE announcement made by Attorney-General Knox that the President has directed him to bring suit under the Sherman anti-trust law for the dissolution of the Northern Securities Company (the merger of the Great Northern and Northern Pacific railroads) has made no small stir. Governor Van Sant, of Minnesota, says he is "delighted" over the decision. and Attorney-General Douglas, of the same State, declares that he is "clated"; but in Wall Street a different feeling prevails. "Security markets in New York, London, Paris, and Berlin," says the New York Herald, "were demoralized by the announcement," and the New York Tribune declares that "not since the assassination of President McKinley has the stock market had such a sudden and severe shock." "It is like a thunderbolt out of a clear sky," said one prominent capitalist. "Certainly the sudden dash of the Executive into the controversy while the Supreme Court-a coordinate branch of the Government-has it under advisement," remarks the New York Mail and Express. "is not likely to be regarded by reasonable people as the most appropriate manner in which action by the President should be initiated." And the New York Nun expresses a similar opinion. It is keenly remarked by the Baltimore Herald, however, that the consternation in Wall Street "would seem to prove that many brokers and holders of similar securities were extremely doubtful as to the right and wrong of the case," and it adds that "this, then, should be taken as the most positive of all proofs that the President was fully authorized under the circumstances to direct the Attorney-General to have the whole matter decided by the highest tribunal created by the Constitution."

The case before the Supreme Court, referred to above, is a motion of the attorney-general of Minnesota asking leave to file a bill of complaint against the Northern Securities Company on the ground that its charter is a violation of the constitution of Minnesota. The decision of the Court was being awaited with great interest, but the suit of Attorney-General Knox now supersedes it in importance. Some think the President might have waited for the Court's decision on this case before starting another one. The Mail and Express says his action is "beyond comprehension." The New York Commercial Advertiser, however, points out that the two cases "are framed on entirely separate lines," and a decision against the Minnesota litigants would not "put the Attorney-General and the President in the awkward predicament they would be in if the subject-matter in the two cases intersected each other."

Instead of disregarding the feelings of Wall Street, the President is said by the Washington correspondent of the Philadelphia Ledger to have had the utmost consideration for them. He says:

"The public announcement was made with the advice of the President to prevent any great disturbance in values on the

stock exchauges, which was feared if it came in some other way. It was explained that the Supreme Court of the United States is expected to deliver a decision in the application of the attorney general of the State of Minnesota at an early day. This decision may be handed down on Monday.

"The Court may grant the application, or, which is more likely, it may deny the application and deelare lack of jurisdiction.

"Such a decision ordinarily would have the effect of

OUVERNOR VAN SANT, OF MINNESOTA, ... Who Began the Opposition to the Merger.

But this will not happen now in view of the fact that the intention of the Administration to break up this combination, if it can, whether the Minnesota appeal is denied or not, will put the public on its guard and prevent a big rise in the stock, followed by what otherwise night have been a panicky decline should the intention of the Government have been withleduntil the Government's suit was actually brough.

"The President looks for full justice to be done in this matter. He takes the position that he is just as much bound to act if the public interests are threatened and the laws violated by the Northern Securities Company as he would be if a graver rlot were in progress and disorderly persons were destroying the property of Mesrs. Morgan, Hill. and Harriman, in violation of United States laws, and State authorities, incapable of enforcing public order, called on him for United States troops to put the riot

down. "The President is making no threats and indulging in no bun combe. There has been no conflict between the President and Attorney-General Knon and Secretary Root over this question. The President and the Attorney-General are in absolute hisrance of the Attorney-General are in absolute hisrance of the Attorney-General are in absolute hisrance in the Attorney-General are in the Attorney-General and that he has no personal feeling in the matter one way or another. He believes he will win the case he has undertaken for the Government, It will be a matter of professional pride for him to win it, expecially in view of the fact that he will have prited against him three of the greatest lawyers in the country—one of them John W. Griggs, his predecessor in office, and two of them, John G, Ishnson and K, Ishnson and K

W. D. Guthrie, who were mentioned for the position which he now holds."

Says The Wall Street Journal:

"The case may have some political aspect. Charges were made in Congress the other day to the effect that the Administration did not dare to take measures against the trusts. It is hardly to be supposed that the President's action was in response to a taunt, but he may have thought there would be no harm in showing independence on this point.

"Marketwise, the most important effect will be the elsek that will be given to allied enterprises. The interests that have senrities combinations in mind will be compelled to wait a decision in this case, and this will probably prevent soone activities in the market which would have otherwise been seen. Whatever the outcome, the immediate effect will be delaw.

"The action of the President brings the whole matter to a test on the vital points, und, moreover, does so in a fashion that admits of no misconstruction of motives. Heretofore, when private individuals have instituted proweelings in matters where large financial interests have been concerned, they have laid themselves open to charges of stock-jobiling and blackmatting, and these charges have been invariably made by a section of the press, no matter upon what grounds action was brought or relief sought. The incre opposition to plans concurred in by large in. No doubt in namy eases it has been corrunt.

"In the present case, however, all such objections and criticisms fall to the ground, and, in view of the general interest in this question of combinations, it is very desirable that a typical case shall be tried out on its merits as mon as possible. This has been rendered possible by President Roosevett's action."

# REPORT OF THE COMMITTEE OF FIFTEEN. \[\begin{align\*}\lambda \text{HAT} is considered by many the best book that has come. \end{align\*}

VV to light in this country on the control of the social ovit in cities, appears in the form of a report by the "Committee of Fifteen," which has been dealing with this problem in New York City. The major

STATE SENATOR JOHN RAINES, Author of the "Raines Law."

there be found so comprehensive or so clear a statement of the problems involved."

The abolition of the social vice the

part of the book

is devoted to a

weighing of the re-

sults of municipal

regulation, or "re-

glementation." in

European cities,

prepared by Mr.

Alvin S. Johnson,

instructor in eco-

nomics in Bryn

Mawr College; and

the Committee

says of his work

that "in no other

mblication can

Committee does not appear to consider possible. "Experience has shown," it declares, "the furtility of measures that aim to abolish the certl." Governmental or numicipal regulation is considered at great length, the Committee reaching the occulission that the system has proved a conspicious fadirie, "After a bundred years of experience, and with practically unlimited power to deal with protettions as it will, the most perfect of police administrations, that of Paris," it is found, "is munifically unable to cone with it," and "New York presents a more diffic

cult problem with respect to reglementation than Paris or Berlin." There are also strong moral reasons against attempted regulation. The New York Evening Post says:

"Primarily this work will bring joy to the hearts of those men and women, the world over, who, like Mrs. Josephine E. Butler, have given their lives to opposing government regulation—the system by which

the state or the municipality becomes a partner in the traffic, and endeavors to make vice safe and easy. The futility of this endeavor from every point of view is ab. solutely demonstrated by the Committee's monograph. The alleged sanitary advantages are shown to have little or no foundation in fact and to be of no importance as compared with the moral disadvantages. The Committee affirms that moral grounds alone would have led them to declare government regula-

tion intolerable.

WHILIAM H. BALBWIN, JR., \*Chairman of the "Committee of Fifteen."

This alleged panacea for what the Committee rightly characterises as 'an infinitely complex phenomenon, intangible and indefinable,' full of 'practical and moral difficulties,' it denomeses as too panacea at all,' and the facts and statistics bear it out beyond question. The arguments here collected will be an inspiration and an aid to anti-regulationists for decades to come, and should forever silence the superficial thinker who sees in government control an ensuy way out, merely because it has been attempted abroad. The moral sentiment in American cities has long been irrevo-cably and irremovably set against regulation. But if it we not, this beacon of the Committee would of Itself prevent the steering of so false a course.

If abolition and state control are both impossible, what does the Committee recommend, then? Moral regulation. It recommends the reformation of the "Raines law hotels," and, as The Evening Post observes, the Committee's expost of the "almost inconcervably nefarious part the Raines-law hotel has played in the recent great spread of vice in this city will astonish even those who believed themselves familiar with the subject." There does not seem to be any evil feature of this and its allied forms of vice that these "hotels" have not made worse. Since the committee's report was published, Senator Ruines has introduced into the New York State legislature some amendments to his law which he thinks will kill the "fake" hotels that have caused much of the evil. The Committee also makes other recommendations which seem intended to "lead not into temptation" the young and those born to unfortunate surroundings and influences, and to "deliver from evil" those who so desire. After discussing these recommendations at some length, the Committee summarizes them in the following paragraph:

"The better housing of the poor, purer forms of anuscement, the raising of the condition of labor, specially of female labor, better moral education, nimors more and more withiram from the clutches of vice by means of reformatories, the spread of contagion checked by more nodequate hospital accommodations, the evil itself unceasingly condemned by public opinion as a sin against morality, and punished as a crine with stringent penalties whenever it takes the form of a public unisone—these are the methods of dealing with it upon which the members of the

Committee have united, and from which they hope for the abatement of some of the worst of its consequences at present, and for the slow and gradual restriction of its scope in the future."

#### A CHARGE AGAINST PRESIDENT MCKINLEY.

CONTROVERSY has been started in a charge made by the New York correspondent of the London Times that President McKinley, on the eye of the war, suppressed friendly overtures by Spain, and thus caused war when he might have had peace. This charge is credited by the London Saturday Review and the New York Evening Post. The former says: "We never thought the Americans went into that war with clean hands, but we had not conceived that they were soiled as The Times's correspondent suggests or rather affirms." According to those responsible for this charge, Secretary Day, on March 27, 1808, instructed Minister Woodford to demand an armistice between the Spaniards and Cubans, and the "immediate revocation of reconcentrado order." Spain at once complied with these demands, revoking the reconcentrado order and providing for the relief of homeless Cubans, and on April 5 Minister Woodford cabled the full text of a proclamation, which the Queen offered to issue before noon of the next day, offering an armistice to last until October 6. Independence for Cuba was not asked. On April 11, the charge runs, the President sent in his message, turning over the matter to Congress, but without saving that Spain had met every demand, and not mentioning the reconcentrado matter at all. One portion of his message, referring not to the note of April 5, but to another one received April 10, was as follows:

'Yesterday, and since the preparation of the foregoing message, official information was received by new that the latest decree of the Queen Regent of Spain directs General Blanco, in order to prepare and facilitate peace, to proclaim a auspension of hostilities, the duration and details of which have not yet been communicated to me. This fact, with every other pertinent contions to the solement of the process of the properties of the in the solement deliberations upon which you are about to enter. It this measure attains a successful result, then our aspirations as a Christian, peace-loving people will be realized. If it fails, it will only be another justification for our contemplated action."

The New York Evening Post charges that the despatch of April 5 was "suppressed," and "was, in fact, jealously guarded in the State Department for more than three years," It goes on to say:

- The St. Paul Pioneer Press.

"Some people get angry when told that President McKinley, at that crisis, 'abdicated.' But he himself admitted it. In his auswer, through Mr. Day, to General Woodford's urgent appeal. he said, 'The President can not assume to influence the action of the American Congress.' But who said that? Why, the man who had in his own hands the entire negotiation. It was his sworn duty, his solemn obligation, to conduct the affair alone, and to report to Congress, if he could, a completed solution of the grave luternational problem. Yet, instead of seizing cagerly upon the great concession by Spain, and using it to build up an honorable peace, he turned politely away with the remark that he could not think of undertaking to influence Congress! There was the unmistakable surrender of the powers and duties of a great office. What we assert is that a determined Executive, at once accepting and publishing General Woodford's despatch, hailing it, as he well might, as a great triumph for American diplomacy, and throwing his superseded message into the wastebasket, where it belonged, could have rallied such a peace party throughout the country that a Congress mad for war would have been brought to a muttering submission. There was the great opportunity to prevent the war. It was an 'inevitable' only in the sense that the President of the day was one who would inevitably yield to the pressure of hot-headed Congressmen. 'In war,' said Napoleon, 'men are nothing, and a man is everything.' Unluckily, that man was wanting in those critical days of April, 1898,"

On the other side, the New York Commercial Advertiser declares that the charge is "absurd," and is only part of an attempt "to asperse the memory of the late President." Says the New York Time.

"Congress perfectly understood the 'full significance' of every offer made by spain. The debate shows it. The offers to suspend hostilities, grant autonomy, and refer the destruction of the Mante to arbitration were deliberately and with full knowledge rejected by Congress as futilities since Congress knew and the American people knew that nothing but the independence of Cuba could put a stop to the war; and the President spoke the control of the Congress of

"The Evening Fost has charged that President McKinley withheld from Congress, the war-making power, information which might have enabled it to avoid war and reach a peaceful settlement with Spain. This charge, if proved, would cover the name of McKinley with infamy. The charge is not only width unreasonable, since it is known to everybody that President McKinley desired peace and diligently sought to averthe calamity or war, but we have above non-invised the charge and offers in proof merely its own preposterous interpretation of the despatch of April 5, which was in itself without value as an aid to peace and which became wholly naimportant when the note of April owas given to the country and to Congress."

THE LION: "The Congressman must want a corkscrew."

- The Detroit Journal.

#### TRYING TO STOP THE SCHLEY DISPUTE.

A SURVEY of the newspaper expressions on the Irresident's verdict in the Schley case shows a hearty desire out the part of most of the newspapers to be rid of the matter. The comment in many cases is jaded or perfunctory, often consisting merely of a digest of the President's versilet, with a single sentence of approval or disapproval at the end; and it is noticeable that the newspapers do not follow up the vertilet with editorial comment day after day, on different phases of the decision, as in previous developments in the controversy, but, after one comment, turn to other affairs. Both the admirals concerned are now on the retired list, and the Washington correspondents say that the leaders in Congress have agreed not to take up the dispute there. Secretary Long, it is said, considers the controversy over, and will welcome it as an opportunity to retire from the Cabinet.

In brief, the President condemns "the failure to enforce an efficient night blockade at Saatiago while Admiral Schley was in command"; expresses "reasonable doubt" as to the truth of the charge that Schley "did not move his squadron with sufficient expedition from port to port"; and says that the admiral "most gravely erred" in his "retrograde movement" when he abandoned the blockade, and in his disobedience of orders and misstatement of facts in relation thereto. These acts prior to the Santiago fight were, however, the President thinks, condoned by retention in command, and promotion. The damage indicted and borace by the different vessels of the American fact is then reviewed, and, according to the data given, the Invado both gave and received no less injury than the Brasdlyn. "The most striking act" of the fight was Wainwright's eacouater with the top-qod craft.

As to the vexed question of command, the President says, a "Technically Sampsoa commanded the fieet, and Schleys, a usual, the western division. The actual fact, the important fact, is that after the battle was joined not a helm was shifted, not a gun was fired, not a pound of steam was put on in the engine-room aboard any ship actively engaged, in obedience to theorder either Sampson or Schley, save on their own two vessels. It was a captains' fight." Sampson, the President declares, "was hardly more that technically in the fight," but deserves credit for "the excellence of the blockade" and "the preparedness of the ships," Coming to the "loop," the President says.

"Admiral Schley is rightly eatitled-as is Captain Cook-to the credit of what the Brooklyn did in the fight. On the whole she did well: but I agree with the unanimous finding of the three admirals who composed the court of inquiry as to the 'loon.' It seriously marred the Brooklyn's otherwise excellent record, being in fact the one grave mistake made by any American ship that day. Had the Brooklyn turned to the westward, that is, in the same direction that the Spanish ships were going, instead of In the contrary direction, she would undoubtedly have been in more 'dangerous proximity' to them. But it would have been more dangerous for them as well as for her! This kind of danger must not be too nicely weighed by those whose trade it is to dare greatly for the hoaor of the flag. Moreover, the danger was certainly not as great as that which, is the self-same moment. menaced Wainwright's fragile craft as he drove forward against the foe. It was not, in my judgment, as great as the daugef to which the Texas was exposed by the turn as actually made. It certainly caused both the Brook/rn and the Texas materially to lose position compared to the fleeing Spanish vessels. But after the loop had once been taken Admiral Schley handled the Brooklyn manfally and well. She and the Oregon were thenceforth the headmost of the American vessels-tho the lowa certainly. and seemingly the Texas also, did as much in hammering to a standstill the Viscaya, Oquendo, and Teresa; while the Indiana did all her eastward position and crippled machinery permitted. In the chase of the Colon the Brooklyn and Oregon share the credit between them."

After a good word for Captain Clark of the Oregon, the Presi-

dent estimates the credit due by saying: "It is evident that Wainwright was entitled to receive more than any of the other commanders; and that it was just to Admiral Sampson that the should receive a greater advance in numbers than Admiral Saway—there was nothing done in the battle that warranted any nuusual reward for either. In short, as regards Admirals Sanujuson and Schley. I find that President McKliney dis substantial justice, and that there would be no warrant for reversing his action." He closes by indorsing the recommendation of the court of inquiry that "no further action be had in the matter."

Some of the Schley papers comment on the verdict pretty biterly. The Baltimore American declares that it "shows the action of a mind racked with prejudice," and the Raleigh News and Observer finds that "justice is denied by the chief executive of this mighty republic"—"it crieth aloud in the street, but on galn no admission to the White House." The New York Journal calls the decision "disingenuous, evasive, and cruel, "brands the President as a "politician and trimmer," and says he reached this verdict "in order to fall in with the bureancratic influences around him and to meet the wisses of Schley's enemies."

The New York Evening Post, which has not taken much part in the controversy heretofore, says;

"In the discassion of the Brooklyn's 'loop,' we fear that Colonel Roosevelt's own impulsive valor has led him to overlook the real motive and justification of that sheering movement. It was in evidence before the court of inquiry that both Captain Cook and Admiral Schley had coolly and deliberately determined to prevent the Brooklyn from getting disabled early in the battle. 'Much will depead upon this ship to-day,' was the burden of their thoughts as they saw the supposedly swift Spanish cruisers coming out, with the New York away, the Massachusetts coaling at Guantanamo, the lowa foul-bottomed and siow, the Indiana with crippled machinery, and realized that the Brooklyn could alone be counted on to hang upon the flaak of the fleeing Spanlards if they once got clear. We have always believed. therefore, that the commander of the Brook/vn showed true comprehension of the situation, as everybody supposed it to be, when he resolved to keep his speedy cruiser ont of a mêlee at close quarters, in which she might be smashed and allow the enemy to outfoot the other American vessels. That it was a mistake in judgment to turn to the East, thus endangering the Texas, rather than to the West, may freely be conceded, but the movement away from the Spanish ships we think to have been strategically sound. . . . . .

"To dare greatly for the flag," may be to dare to keep your head is an emergency, and to husband your striking power for the critical moment. If the Brooklyn had dashed forward and been ranned or torpedoed early in the fight, it would have been magnificent, but it would soot have been war."

On the other side, the New York Sun says

"Yes, it was a captains' fight, as on other levels of action it was a gun-enfusins' fight, and a gunners' fight. But Sampson was commander when the battle began, and his command he never lost; and when we come to apportion the commander's honors, by a universal rule of military practise the truth is that, with the exception of the Hracebyn's loop, not a helm was shifted, not a gun was fired, not a pound of steam was put on in the engine-room alorard any ship actively engaged, except under tago are due as clearly and emphatically as tho the New York had fired at the Spanish ships every shot in her locker.

"The Schley bubble is exploded, and the Schley mania can not long survive it. But incurable is the misery it has left in its train."

The Providence Journal remarks:

"Had Commodors Schley sought 'the bubble reputation at the canaon's mouth' as persistently and relentlessly as Rear-Admiral Schley (retired) has sought the same evanescent bauble at his own mouth and at the mouths of lis delinded admirers, the name of Wisheld Scott Schley might have passed into American history as that of one of the greatest of our long list of naval worthies. But now, after months of chicanery and posing in search of a vindication from the criticisms of his brothers in arms, after political wire-pulling, setulous puffing on the part of coddled newspaper reporters and ignorant applause from the 'man in the street' who only knows that 'he was there,' he finally retires from the contest for fame with a rebuff, with the condemnation of the court of last resort (in the service), the commander-in-chief of the navy. And it is to be sincerely hoped that this final rebuff, the opinion of the Prevalent upon Schley's the commander-in-chief of the navy. And it is to be sincerely hoped that this final and that the country will have heard the last of this absurd final and that the country will have heard the last of this absurd chase of Admiral Schley after honor which he never earned and after vindication from grave charges of official misconduct, to which he never was entitled.

#### CAUSE OF THE RIOTS IN BARCELONA.

WHILE most of the American papers sympathize with the people of Bareelona in their armed uprising against Spanish rule, some think it were wiser for the Catalonian to bear the ills he has than to fly to others that he knows not of. The Pittsburg Gazette, for instance, thinks the rioters show a lack of mental balance. It was 's:

"There is nothing new or strange in the senseless orgies which characteries the Spanish workman when on strike. Naturally impalsive and unreflective at best, in the hour of individual or national adversity be is quite as nugovernable and reacticirant as an muraly child. Of course at first sign of disturbance the troops are called out, while the mob, individual or though are called out, while the mob, individual or strikes its feedbe blows, which are retailated with meroities promptities. It shows to what length these misguided men may go when it is feared they are preparing to attack the factories in which they earn their hread. Spain is not a country which reciprate quickly from industrial depression, so that if the ricters should carry out their threats the outlook would be very serious indeed."

Other papers, however, give us quite a different picture. Thus the Cleveland Leader:

"The fact that Barcelona figures more often than any other city of Spain in news of riots and disorder might lead Americans ignorant of Spanish affairs to suppose that it was a very benighted or especially unpromising place. But exactly the reverse is true.

"Barcelona is the most thrifty, progressive, and advanced of all the great cities of Spain. It is the chief town of Catalonia, the one important part of the Spanish kingdom where trade and industry develop after the fashion of the leading countries of the critized world. In Barcelona there is an atmosphere of enterprise and progress far different from the sleepy, indolent appearance of many ancient cities of Spain.

"That is what makes the Catalan metropolis so restive. Ifs people have modern ideas of short hours of labor, good wages, political freedom, and the importance of trade and industry.

They object to the taxation heaped upon their business interests to raise money to be spent in Madrid. Hence their attitude is often semi-revolutionary, and Jabor troubles are apt to be violent.

"It is true that Barcelona has more than its share of the Anarchists and Socialists in Spain, but that is because they work most and find their best opportunities for a gitation in

JOHN BULL TAKES THE LEAP AT LAST,

- The Detroit News.

places which feel the ferment and unrest of the times and exhibit those wide contrasts in fortune which are most marked and numerous in modera centers of business, wealth, and industry. If Barcelona were less progressive and rich there would be less heard of social disturbers there.

"In a country like Spain the most backward and supine cities are most quiet and passive. They have not enough of the spirit of the age to appreciate the shortcomings of their Government and its subjects."

#### EUROPEANIZING THE AMERICAN ARMY.

OPPOSITION to Secretary Root's bill now before Congress, for reorganizing the army comes from the Philadelphia Record (Ind. Dem.), which remarks that "anywhere else the notion that a lawyer or butcher or baker or candlestick-maker would be quite as good a judge of military matters as any man whose life had been devoted to their study would be whistled down the wind; but here it is part of the unwritten law of the republic," It adds:

"If the nation were required to fight for its existence it would be well enough to get ready and take our place among the war Powers. But however desirable for some reasons, the creation of a general staff for the federal army—an official mechanism that shall be practically independent of any casual and accident als secretary of War—is of profound concern to the people who pay the cost of the military establishment. There is really on danger whatever to the republic from any foreign adversary. Yet it pleases the dabsters in government at Washington to assume that republican institutions may be best promoted by imperial methods; and hence the effort in the War Office to make the general staff supreme in military affairs.

The new scheme is "almost revolutionary," says the New York Sum, and is "totally at variance with the laws and customs hitherto obtaining in our army." Yet it is approved by The Sum, and by almost all the papers that comment on it. The main feature of the plan is a centralized group of officers, known as a "general staff," who shall have charge of the control and subsistence of the army, and be responsible for its efficiency and equipment. These sluties are now divided among a number of bureans which are more or less subject to political influence, and which do not always

work in harmony, Says the New York Mail and Express:

"Under this plan, properly administered, there would be no such confusion as was exhibited at Tampa in 1898, in

RUSSIA: "What are you boys doing up there?"

JAPAN: "Just painting signs."

- The Philadelphia North American.

which the components of the individual rations which were to be put on the transports for the men going to Cuba had to be hunted up on, perhaps, laff a dozen different trains of freightcars scattered over all the sidings between Lakeland and Port Tampa.

"Sceretary Roof's plan is not only in accordance with the plainest dictates of common sense and husiness prudence, but in harmony with the experience of the European armies. As to fighting and field campaigning, we are probably now, and always have been, quite the equals, at least, of the European armies. In this respect they have probably more to learn from us than we have to learn from them. In the field of organization of big operations and the subsistence and management of great armies, however, they are ahead of us, because they have had the thing to do, and for a long time we have not."

#### The New York Press remarks similarly :

"The officer at the lead of this organization will have the next wair in his pigeonbides when it breaks out, or he will have been recreant to his duty. If the first campaign is a failure in design the warfar of the country will have a place to strike. If it be a success, the praise of the country will for once know where to bestow thech. We shall know our Le Beut (lie who declared the French army 'ready to the last gatter button' in 1870), and shall get no proclamations to the solidies and interviews in the newspapers from our highest combitant officer. We shall get the most serious professional work of which he is capable."

Secretary Root's bill also provides that army officers shall be promoted for merit instead of for seniority, as at present; and provides that militia organizations in time of war shall be liable to be called out to serve for nine months in any war that may break out during enlistment, instead of being free to go or stay at home at will

#### CORRUPTION IN WASHINGTON'S DAY.

M.R. NORMAN HAPGOOD, in his recently published biography of Washington, tells us that the general moral conditions which Washington faced "were decidedly not superior to those in which we live to-day." Mr. Hapgood quotes in proof of this some of Washington's own words, as follows:

"If I was to be called upon to draw a picture of the times and of Men from what I have seen, and heard, and in part know, I should in one word say that idleness, dissipation, & extravagance seems to have laid fast hold of must of them. That speculation, peculation,-and an insatiable thirst for riches seems to have got the better of every other consideration and almost of every order of men .- That party disputes and personal quarrels are the great business of the day, whilst the momentons concerns of an empire-a great and accumulated debt-ruined financesdepreciated money-and want of credit (which in their consequences is the want of everything) are but secondary considerations and postponed from day to day-from week to week as if our affairs wear the most promising aspect-after drawing this picture, which from my Soul I believe to be a true one, I need not repeat to you that I am alarmed and wish to see my Countrymen roused?"

#### Washington is quoted as saying of Congress:

"It is a fact too notorious to be concealled that C—— is rent by party—that much business of a triding nature & personal concernment withdraw their attention from matters of great national moment. . . When it is also known that idleness & dissipation take place of close attention and application, a man who wishes well to the liberties of his Country and desires to see its rights established can not avoid crying out where are our men of abilities? Why do they not come forth to save their country? let this voice, my dear Sir, call upon you—Jefferson & others—do not from a mistaken opinion that we are about to set down under our own fig:tree, let our hitherto noble struggle end in ignom'y—believe me when I tell you there is danger of it."

This brings out the following paragraph from Mr. Hapgood:

"His low opinion of Congress was shared by many men of the

first reputation. John Jay, then President of Congress, wrote to Washington, April, 1779, that the marine committee was guide in its decisions by a commercial agent lie Europe and his connections. "There is," he said, 'as much intrigue in this State houses as in the Vatican, but as little secrecy as in a boarding-school,' General Green wrote to the Commander-in Chief, in April, 130, the product of the product of the product of the same time, 'It is said, days and weeks together are spent upon the most trifling disputes in the world; and those generally of a personal nature."

#### THE TILLMAN-MCLAURIN AFFAIR.

THE fistic encounter on the floor of the Senare last Saturday between Senators Tillman and McLaurin is pretty generally considered a disgraceful affair. The Senate has declared the two members in contempt, and may take more severe measures. The affair started with a charge made by Senator Tillman, during the Philippine debate, that Senator McLaurin in toning for the treaty ceding us the islands had been influenced by the promise of the feeleral patronage in South Carolina. When Senator Tillman finished, Senator McLaurin sprang to his feet and declared that his colleague's charge was "a wilful, malicious, and deliberate lie." What followed is thus narrated in a Washington despatch:

"Mr. McLaurin got no further with his statement.

"Mr. Tillman, who was occupying his regular seat on the main aisle, sprang with tiger-like ferocity at his colleague.

"Mr. Teller, who was sitting at his desk between the two South Carolina Senators, was swept aside without ceremony; indeed, the infuriated Tillman elimbed over him in his effort to reach McLaurin.

"Without the slightest hesitation, Mr. McLaurin sprang to meet the attack half-way. Mr. Tillman aimed a wild blow at his colleague with his right fist. It landed on Mr. McLaurin's forehead, just above the left eye, althe its force was partially spent on McLaurin's arm, which he had raised in an effort to parry the blow.

"instantly McLaurin's right arm shot out, the blow landing on Tillman's face, apparently on the nose. Again Tillman struck out frantically, this time with his left hand. The blow did not land on McLaurin. Then followed a wild scrimmage, both Senators clutching at each other madly.

"Senators Warren and Scott, both of whom are powerful men, rushed toward the combatants to separate them. The assistant sergeant-at-arms, Mr. Layton, sprang over desks in his effort to reach the belligerent Senators. Just as he seized McLaurin, Tillman amued is left-hauded blow at his colleague, which struck Mr. Layton in the face. Fortunately the blow was glancing and did no special harm.

"Mr. Layton tore them apart. Both Senators still were striing wildly at each other, some of the blows handing upon Mr. Layton. An instant later the angry Senators were pinioned in the arms of Senators Scott and Warren. They were dragged further apart, altho they still made jueffectual efforts to get at each other. Finally they were forced into their seats.

"Mr. McLaurin, altho very pale, seemed to be the calmer of the two. Mr. Tillman was swithe as a sheet. As he sat down in his seat he drew his handkerchief from his pocket and wiped blood from his face that seemingly was flowing slightly from his nose. Until that time it had not been supposed that blood bad been drawn in the encounter.

"During the fight Senators all over the chamber were on their feet. Not a word was spoken, however. The Senate rarely in its history had received such a shock."

The New York Times (Ind.) demands that Mr. Tillman be expelled from the Senate, and the New York World (Ind. Dem.) thinks both men should be disciplined. Says the Philadeliphia Press (Rep.):

"This contemptible exhibition of the length to which the senior Senator from South Carolina carries his personalities is doubly mortifying to the country at the present moment. It would be humiliating without relief, occurring as it does at a time when the eyes of Europe are directed toward us, were it not true that the Austrian Rechestal during and since the stormy session of 159, has seen even worse outbreaks, in which not only two but many members took part, while our Italian frends in Italy and France have also had some lively times in parliaments assembled, and even the staid precints of Westminster have known a shindy within a few years that was more of a milite than vestreday's row at Washington.

"Two or many wrongs, however, never make a right, and the country as one man will demand of men like Tillman and his recent td only wordy Kentucky associate in rowdysm. Wheeler, that they mend their ways. Above all, the better sentment of the South should protest against these verhal and physical outbreaks, which to often supposedly stand for its polices and better the standard of the standard processing the standard nen. It is time the day of billingegue and mas a political arguments came to an end."

#### THE WORLD'S MONEY CENTER SHIFTING.

HE financial center of the world still remains fixed at London despite enthusiastic American assertion to the After making this declaration. The Rankers' Magazine (New York) in an editorial tells us that the money center is gradually shifting to New York. It says the principal thing that had to do with the growth of the credit of British securities all over the world was "the act making the pound sterling in gold the basic unit of all business transactions." The British islands were in such a position that they were comparatively free from the immediate effects of war. London was a safe place to store valuables. During the last one hundred and fifty years, the governments of nearly every part of the civilized world were in a condition of change. The British islands were the first to emerge from the confusion and obtain a settled government. Vast territories and millions of people depended on these islands "for their orderly transaction of affairs." Freedom of trade became a necessity, and "London, the great city of the British empire, became the settling-place of the exchanges of the world." The same magazine continues :

"At the present time, however, are there not signs that the superiority gained by the early start in the race and the advantages of an insular position is beginning to wane? The governments of other great nations are settling themselves into something like an equal stability to that of Great Britain. Perhaps also the importance of government, as anything more than a maintainer of the police, is on the wane. The ansaes of men are becoming more thoughtuil, as evidination advances, and are resourced to the property under most any form of government; or rights of property under most any form of government; are rather, that the struggle for the opportunity to use political power may go on with little real interference with those who devote themselves to the pursuit of wealth.

"If the preeminence of London as the financial center of the world is gradually growing less marked, at what other point will the future world's exchange be established? For it is probably necessary that there should always be some market which will be paramount over others. The credit of nations in the management of their financial affairs perhaps affords as reliable a criterion as any other when other conditions approach equality. Certainly the credit of a government in monetary affairs indicates the case with which the necessary expenses of government are good government, the greates the opportunity for them to secure continued prosperity. Of all the nations of the world the credit of the United States, as indicated by the premiums which its bonds command, and the rate of interest realized by investors, is the greatest.

"In the economical use of money and credit other commercial nations far surpass our own. But even with the imperfect means now available, New York, the great commercial center of the United States, is rapidly gaining as a market where capital may be obtained for cosmopolitan enterprise. Enough foreign securities are listed on its exchanges to prove that it will not be long before it will be a recognized market equal to any."

Miss Stone's Captors.—Now that Miss Stone has been set free by the revolutionists or brigands who captured her and Mrs. Tsilka on September 3, the newspapers are beginning to demand that vigorous steps be taken for punishing the captors and insuring the safety of American missionaries in that region. The New York Irithme, for example, declares that the case is not ver fully closed, and says.

"The ransom is paid and the captive is released. Whether or not the brigands are to go unwhipped of justice is for the responsible governments to determine. Certainly somelasdy is responsible governments to determine. Certainly somelasdy is responsible for those brigands. The organization to which they belong and which has previously had a criminal and murderous career, and the government which tolerates and encourages that organization and shitleds it from the due consequences of its acts, can not escape accountability. Brigandage in Europe in the twentieth century is a hideous ananchronism, and the state which tolerates it stands arraigned at the moral bar of the world. It can not persist in such toleration and forever escape arraignment at another bar than the inoral one—the bar of law backed up by rightous force."

Spencer Eddy, Secretary of our Legation at Constantinople, who arrived in New York last Saturday, says that the \$97,500 paid to the captors will undoubtedly be used in the Macedonian revolutionary cause. "It is entirely a political matter," he says, "and all the people in Macedonia are in sympathy with the kidnapping, for they believe it is a step toward freeing Macedonia from Turkish rule."

#### LETTERS AND ART.

# A RUSSIAN ENOCH ARDEN-WITH A DIFFERENCE.

OF the original plays produced at St. Petersburg during the present season, the most "literary," interesting, and successful is that written by I. N. Potapenko, a novelist who is little known abroad, but who is ranked with Korolenko, Tschekkioff, and other talented Russian writers, and who is radical in his affiliations and sympathies. This new play has excited much discussion and controversy, the conservative journals attacking it chiefly for its ideas or informing "moral."

The work is called "The Wanderer," and its hero is a Russian Enoch Ardon. But whereas Tennyson's character quietly disappears from the scene of his former life when he finds his wife remarried and happy. Potapenko's hero, who returns under somewhat similar circumstances, remains to play an important part in the place which knows him not and finds him a disturbing intruder. The work is thoroughly national, and revenls the influence of Tolstoy, Ibsen, and other modern social philosophers. The in several acts, the story may be briefly summarized as follows:

A capable, energetic, and rather unconventional engineer, Dombrovich, had, many years ago, lived and worked in a certain place. He had led a rather disreputable life; had neglected and betrayed his wife, lowing and fautiful to him, and had committed many excesses. In connection with one illicit intrigue lo had incurred the entity of a rival, another engineer named Stansisticheft, and had, in a moment of anger and reklessness, shot and wounded the latter. For this assault with intent to kill, bo had been tried, convicted, and condemned to a long term of lard labor in the Siberian minos. His wide, wounded in her teuder-est feelings and outraged by his conduct, had refused to accompany him to Siberia.

Some years later she married northor man, believing her liniband to have died. To her child, a girl, she had said nothing about the first husband, and the young girl has believed that her father had died when she was an infant. When the play opens, the old troubles had been forgotten, the old sores had healed. One fine day this conviet (pardoned or torleased ut the ordinary course of oversts) returns to his native city. He reaches it on the day his daughter is preparing for her wedding exerming, when any the state of the properties of the wedding exerming, when singularly inopportune arrival, and is absent from the festive and solemn seen, trying to get if of the roturned ex-coviet by inciting the police against him. He succeeds in this, for Dombrovich is imprisoned as a vagrant and dangerous person.

But the facis become known, the family is thrown into dismay, and the daughter postpones her marriage, blaming her mother for concealing the truth from her and also for the injustice to the unfortunate first husband. All fear annoyance and the flight of their handings.

They are, however, soon agreeably disappointed and greatly surprised. The Shierian ex-courter had undergone a complete change of nature. His eyes had been opened, and, in Tolstoy's phrase, his spiritual self had been "resurrected." Love, compassion, and self-abregation have become his railing emotions. He had realized the hollowness of self-indulgence and egoism, and is determined to devote himself to serving his fellow men. He has forgives everybody, and bears no one all will.

The unjustly imprisoned, he makes no complaint. He earns the affection of his fellow prisoners and of the offenish. He is soon released, and he remains in the place as an angel of merey and charity. After a while, however, he determines to seek another field for his benevolence, and announces his intention to depart. All imprison his to surply, but he refesses. His former which price has a surply of the price of the p

a friend of humanity, free to answer any summons. So he departs amid general regret and sorrow, having conquered all hearts and spread the evangel of brotherhood and humanity.

But can the suffering of a Siberian convict have such classtening and enrobling effect on such a nature as Dombrovich's? ask certain critics. Is the conception true to life, or is it the offspring of a theory? Did not Potapenko invent his hero in obedence to a foregone conclusion, instead of taking him from real life? The dramatic critic of the Neventi insists that the play is realistic in the best sense of the term, as well as sound and wholesome in its philosophy.

The critic of the Natoye Veenya, while prassing the play as a work of literature, observation, and art, finds no new principle, no gospel of social significance in it. The author, he says, wrote without sincerity and inspiration, and the sentiments expressed do not ring true.—Translation made for This Literacy Digits.

#### VERESTCHAGIN'S PHILIPPINE PICTURES.

I NTEREST always attaches to an artist who leaves the beaten paths and insists upon expressing his ideals without regard to the conventions or the prejudices of his profession. Such a one is Vassili Verestchagin, the Russian painter. As Mr.

WARREST VERVETCHACEN

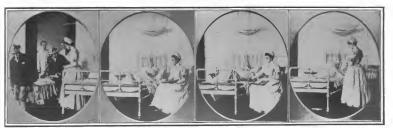

Charles De Kay
points out in Two
Outlook (February
1). Verest chagin
"belongs to no
academy or school,
and he has relied on
his own unaided
business sense to
bring his works before the public."
The same writer
Continues as follows:

"The works of this painter do not greatly appeal to his fellow craftsmen, because they have neither that exceptional composition, nor that precious brushwork, nor that virile drawing, nor those powerful color

scenes which fascinate the brothers of the palette. His life has been too broken up by travel and war and by the tours he has undertaken about the world to preach the gospel of pence, to grant him that leisure for concentration which is necessary to the winning of the suffrages of other artists. The he studied in Paris under Gérôme, he never attained the somewhat cold finish of his master; but he learned enough to compose and execute to the satisfaction of the masses a number of now famous paintings, each of which makes some political or sociological or humane appeal. Having finished a sufficient number to form an imposing collection, he began those wanderings about the world with his own caravan of Oriental and Occidental scenes which he still finds profitable. Just now he is in Chicago showing the old pictures of Russia with events of the Moscow campaign, the old pictures of British and Russian carnage in India and Central Asia, and various new pictures from our own war in the Philippines. . . .

"A realist, Verestchagin is essentially a man of his time, seeking in his own century the documents to prove the folly of mankind in murdering his fellows for the sake of Innd-grabs and the extension of commerce, or for the mere satisfaction of ambition."

In the Chicago exhibition, attention has been focused upon the

THE LETTER IS INTERRUPTED.

THE LETTER LIES UNFINISHED

Philippine series, which is painted with the accuracy, hardness, and brilliancy characteristic of the Russian painter. There are eleven of these pictures, representing, for the most part, battle scenes and hospital interiors. "The Spy" is a tableau before an American officer" stent, showing a Philippine youth captured and bound. "The Deserter" is a similar picture, but the scene is within the dark shadows of a room. The materials for the pictures were gathered in six duys, under circumstances which Harper's IF (excitles as follows:

"It was one morning last February that Vassili Versetchagin landed at Munia, called upon Giencral MacArthur at the pulace to pay his respects, and asked for information and a guide to aid him in his proposed studies of the insurrection. General MacArthur knew, of course, who Versetchagin was, and that he had been artist-correspondent in two wars, as well as a world-traveler of wide experience. He also knew that this uncompromising realist was inspired by a purpose to depict without reserve the horrors of war, in order to help stimulate public opinion against allowing armed men to make deliberate efforts to kill one another. General MacArthur, however, did not hesitate to afford disposal, who took him over the battle-fields heart the city, where the Tagalogs intrenched themselves after their first open defance of United States authority.

"Verestchiagin asked questions, listened attentively to what was told him, but above all observed the country, the soldiers, and the natives. He mude rapid sketches and took diagrams of important fights: he studied uniforms and weapons; he was interested, curreous, reticent, for these six days, and then bade farewell to his guide, to General MacArthur, and to the Philippine Islands."

Special interest is shown in Verestchagin's pictures by the Chicago radical papers. Unity thinks that "the present exhibition contains all the elements, necessary to make it a notable event in the art history of the United States," and that it ought to mark" a great epoch in the ethical life and moral consciousness of thousands of American citizens." It goes on to say:

"There is but one Verestchagin. He is one of the greatest and between artists of the world. His genius has rendered obsolete all the attitle scenes ever printed by his predecessors, and his scenes with the scenes of the property of the pr

we have been doing, the devastation we have wrought, and the indignity we have offered to God and man."

The Worker's Call (Chicago) declares that Verestchagin's "pictures of protest" are a sermon on canvas, teaching that "war

is murder and that the patriotism that leads men to take up the weapons of war is a hideous lie." The Public (Chicago) says:

"Whether or not Verestchagin's paintings, now on exhibition in Chicago, are works of nrt according to conventional art standards, is of secondary concern to spectators capable of appreciating the tremendous truths they reveal. To look upon the Napoleonic and Philippine war pictures is to get a glimpse of hell, and that is an experience

"YOU ARE HIT, SERGEANT?" "YES, SIR."

which is sometimes wholesome for the conscience. Take, for instance, the hospital episode, told in a series of fave [four] pictures, which appear by the elimination of the four pictures, which appear by the desired pictures are stored to the picture in the picture in the picture is the picture in the picture is to find the picture is to the some factor of the most picture is to stand in the presence of abnormal and grawsome death, and to feel the horror of war as an unspenkable reality.

Verestchagin occupied the pulpit of All Souls' Church, Chicago, on Sunday, January 19, and his address on "War: Its Present and Future" (reported in Unity, January 23), was in large part devoted to the "social problem out of which war grows" and to the important part which he believes women will play in the ushering in of an era of universal pence.

Last week Verestchagin was presented to President Roosevelt by the Russian Ambassador. The artist announces his intention of reproducing on canvas the engagement at San Juan Hill, in which the President took so prominent a part, and he wished to hour something of the conflict at first hand. Later, he will go to Cuba, study the battle-ground, and confer with American and Spanish officers, in order that his picture may be a thoroughly accurate one.

#### THE CENTENARY OF VICTOR HUGO.

O N February 25 and for five succeeding days France will do honor to the memory of Victor Hugo, in celebration of the hundredth anniversary of his birth. In Paris, most elaborate preparations are being made, largely under the direction of M. Paul Meuritec, the octogenarian friend and literary executor of the great French author. The house in the Place des Voeges in which Hugo lived for sixteen years will be officially presented to the nation by M. Meurice, and a monument will be unveiled in the Square des Voeges. On February 26 nn imposing cere-

VICTOR HUGO. From an Etching by Maurin.

the Panthéon, attended by President Loubet, the Freuch ministers, and many of the leading literary men of Europe. Bronze medals have been struck at the French mint as popular mementos of the occasion, and there will be a revival of Hugo's lyric drama, "The Burgraves," at the Comédie Française. "It is hardly too

much to say that, within a few years, the name and work of Victor Hugo have

in the French race, much as Goethe has done among the Germans," remarks the Paris correspondent of the New York Exenting Post.

"After Napoleon, it is he—a poet with the Time Spirit breating through his nostrils—that remains the dominant figure of the new France left by the Revolution, which swept away the old."

Prof. George McLean Harper, of Princeton University, writing in The Atlantic Monthly (February) on "The Fame of Victor Hugo," "asys."

"An account of Hugo's literary reputation with the reading public would be a story of continued successes and accumulating graise, at least up to the time of his death. The public has not even made, in regard to his works, the primary discrimination which the critics one and all make tacitly and as a matter of course; for the public still thinks of Hugo as not merely a great poet, but a great dramatist and (face Matthew Arnold) a great romance-writer. It is not often that an artist of any kind or degree has so thoroughly utilized all his resources in the service of the public. None of Hugo's qualities were wasted. None of them, except perhaps the finest parts of his excellence as a versifier, were over the heads of the public. The steady-going world has appreciated, also, those elements of his success which bear a close analogy to business virtues, -the shrewdness, calculation, and foresight, the sense of opportuneness, the careful consideration of demand and supply,-and all this in a poet, in a romanticist, in a contemporary of Musset and Béranger!

The popular judgment on Victor Hugo's literary output, however, does not coincide with the opinions of the French eritics, as Professor Harper is careful to point out. It was Saiut-Beuve, one of the greatest of French critics, who said of Hugo: "Always, in praising or blaming lim, I have wisted lim to be a little different from what he was or could be; always I have drawn him more or less toward me, according to my tastes and individual preferences; always I have set up, instead of the puissant reality before which I found myself, a softened or embelished ideal, which I detached from the reality to sait mysself." And M. Brunetière, while admitting that Victor Hugo's "fectuality of invention, and especially his poetic imagination, are more than incomparable, and are veritably imaque in our literary history," declares that "it is not by his ideas, which are few, of little import, of little originality, and solidom his own, that Hugo has influenced our age, but by his rhetoric." Professor Harper thinks that these verdelicts will stand; and he concludes:

"More and more, as education brings the masses up to a level where current literature becomes one of their interests, popularity and fame will have to be carefully distinguished. They rest on quite different bases. There is no longer any ground for the assumption that what the reading public enjoys will be approved by persons who know most or have the most refined taste. In Victor Hugo's case, there is at present every indication that what literary history will say a hundred years hence will be something like this: 'lle was immensely popular in his day and long afterward. Altho he was a character and an intelligence of secondary order, he was popularly accepted as a leader of opinion and feeling in the nineteenth century. But posterity has hearkened not so much to the popular voice as to the great French critics of his time; and they found him wanting in many qualities which the larger public thought he possessed. In compensation, the critics appreciated, and posterity appreciates. more than the general public of his day ever did, Hugo's wonderful mastery of the French language, Hugo's energy and versatility, llugo's exuberant imagination."

In The Outlook (New York, February 1) Mr. Kenyon West writes interestingly on Victor Hugo's feeling toward the United States. He says:

"For Americans the centeurty of Victor Hugo should have especial unrers because many of his political bleas and ideals were in accord with those of America; and for her institutions, characteristics, and achievements he often expressed profound admiration. 'I love America,' he once wrote to General Claseret, 'I love America as a Patherland, the great republic of Washington, and John Brown is a glory to civilization. America has the dou, ble happiness of being free like Bugland and logical like France. We shall appland her patriotically in all her steps forward; we are fellow citizens of every great nation.'

"In 1851 Mrs. Chapman, the cousin of Wendell Phillips, wrote to Victor Hugo for help in the cause of the Abolitionists, and this was a portion of his eloquent reply: 'Dear Madam: You are good enough to believe that a word from me in this sacred cause of emancipation may have some influence on the great American people whom I love so deeply, and whose destinies are, in my opinion, linked to the mission of France. . . . I agree with you that it is impossible that the United States of America should not within a certain time before long give up slavery. Slavery in such a country! Was there ever such a moustrous contradiction? It is barbarism installed in the very heart of a society the whole of which is the affirmation of civilization. Liberty in chains, blaspheny proceeding from the altar, the negro's fetters riveted to the pedestal of Washington's statue. It is unheard of I go further: it is impossible. It is a phenomenon which will disappear of itself. The light of the ninetcenth century is sufficient to dissolve it . . . Let all generous hearts take courage, . The United States must either give up slavery or give up liberty. They will not give up liberty! They must either give up slavery or the Gospel. They will not give up the Gospel!

"It a 1850 be wrote to George Sand thanking her for speaking of his 'Legende des Sicicles' in terms of which Homer would be proud; then he gave expression to a burst of passionate sorrow. I am overwhelmed with grief: they have killed John Brown. The murder took place on the 2d of December. The promised respite was an infamous device for Iulling popular indignation. And it is a republic which has done this!... Here is a free nation putting to decit he liberator! Alsa! in y least is indeed very that the proposed of the control of the control

The latest of Hugo's posthumous volumes, "La Dernière Gerbe" ("The Last Sheaf") appeared a few days ago. This, with a final volume of μoems, constitutes the capstone of the pyramid of his works.

#### PADEREWSKI'S GYPSY OPERA.

"HE production of Paderewski's new opera, "Maura," at the Metropolitan Opera House, New York, is regarded as the most important event of the present musical season. "Manru" is the first grent opera ever produced in this country under the supervision of its composer, a fact which in itself, as is pointed out by The Evening Post, makes its performance "an event of historic importance." New York is the fifth city to hear "Manrn." Dresden, Lemberg, Colorne, and Zurich having preceded it. The opera was first produced, with great success, at the Dresden Royal Opera House on May 20 last, under the haton of Ernest von Schuch. The production in New York was under the direction of Walter Damrosch, with the immediate supervision of the composer in the later rehearsals. M. von Bandrowski, the Polish tenor, engaged especially for the title rôle, made his debut in America in this part, and Madame Sembrich scored a decided success as Ulana, a Polish peasant girl. Of the reception given to the opera The Times says:

"The production of 'Manra' was attended by a large and brillant audience, and the demonstrations of deligit were numerous and predonged. What percentage of the enthusiasm was due to fondness for the man and what to the intrinsic ment of his work can not be guessed. The attendance at later performances will show that. But for the present it must be recorded that Mr. Paderrewkii's 'premiere' was one of high distinction. It is seldon that an American audience is so enthussatic as last upth's was at the end of the second act, when the composer received fifteen calls."

Of the structure and the merits of the opera the same paper declares:

"As a work of art' Manru' commands respectful consideration, and for some of its features frank and hearty admiration. Its promise is great; its achievement not little. Its weaknesses are largely due to its libretto, which is unskillul in construction and

unpoetic in diction. Readers of this paper have not now to be told that the theory is here held that the libretto is vital to the specess of an opera. More especially is this so when the composer has abandoned the older Italian methods and undertaken to make an organic union between music and text. This is what Mr. Paderewski has done. He certainly selected his own tome and contided its working out to a librettist. That Dr. Nossig has not succeeded in elaborating the materials to the greatest advautage may be seen at a glance. "Two elements appealed to

"Two elements appealed to Mr. Paderewski in the choice of a subject for his opera. These were gypsy music and the gypsy music and the gypsy music and the gypsy music may be elevered that the two might be made to work together to supply the fundamental emotional plan and the outward expression of a brie feraum. Thereanth is that the story of 'Manru' becomes to a certain extent symbolical. Manru, the gypsy, is a type, and his struggle which mostitutes the real tragedy of

the work, is typical, elementary, and of universal application."

Like Waguer's Nibelung dramas, "Manru" is a romance of nature—an open-air opera. Like Bizer's "Carmen," it is a eyrsy opera. But, milke both, it is instinct with the Polish and

Austro-Hungarian spirit. Its plot is based upon Kraszewski's novcl, "The Cabin Behind the Wood," and the librettist, Dr. Alfred Nossig, is a Polish sculptor and musician. Says The Evening Post:

"Paderewski's 'Manru' attests that Poland, for the first time, has produced an opera composer of real genins. The most sur-

prising thing about it is that there is so little suggestion in it of Choorn, the musician with whose idens Paderewski. as pianist, has become so thoroughly saturated. When one plays the piano (vocal) score . . . Chopin is perhaps suggested in a few places, but when the orchestra plays the resemblance vanishes. Nor is Liszt directly drawn upon the he is another idol of Paderewski, the greatest of all his interpreters. The only musician with whom the com-DOSET of "Mauru" Carright, 1901, by Aims Dupour went to school is

27right, 1901, by Aime Dupont.

ALL XANDER VON BANDROWSKI AS "MANRU."

Wagner's works "Siggfried" had the deepest influence on blint, the "Tristan" and "Die Walküre" are also suggested. "Siggfried" is very mucht in the aft in the first scenes of the second act, and also in the superb introduction to the third act. Vet it can not be said that there is more of Wagner in this first opera of Paderewski than there is of Marchner and Weber in the first operas of Wagner, or of Haydn and Mozart in the first symphonics of Beethoven. There is a 2ctigeist in music as in everything class, and no young composer can escape it."

The Tribune says:

"' Manru' is not an opera to be disposed of with a hurried ultimatum on either book or music. From a score point of view it not only invites, it almost elamors for discussion. The book is awkward in construction, and at times amazingly silly in lauguage; yet its fundamental idea is kept before the mind persistently and alluringly by the devices of the composer. A gypsy who forsakes wife and child because he can not resist the seductions of a maid of his own race would ordinarily be a contemptible character; yet, despite the want of literary and dramatic skill of the librettist, Mauru is presented as a tragic type, who goes to merited destruction, indeed, but doing so nevertheless leaves an impression that he is less the victim of individual passion than of a fatality which is racial. . . . Centuries, more than we can think of, have fashioned the roaming disposition in the black-blooded people and made it an irresistible impulse. Thus the poetical essence of Manra's character is accounted for, and the librettist has given it expression which is not juept:

With longings wild my soul is fill'd: Spring's voices shout within me Each fibre in my frame is thrill'd With feetings that would win me In bush and brake Of nature's joy the woods partake, And hear me beinless, spent, along, Where freedom lives, far from the throng! Thus pours the mountain torrent wild, That stubborn rocks would check : Thus rolls the molten lava stream Dispersing havor dire, anpreme, Enfolding, whelming all in wreck! Thus flies the pollen on the breeze. To meet its floral love; The song, ourgushing from the sout, Thus seeks the starry vanit above. Is it a curse ! There is no other life for me 'Tis written in the book of fate;

"Thy race must ev'ry pledge abate, And wander, rove eternally!" Bot why! And where! I know it not— I needs must fare....

"Mr. Paderswaki has written like an eelectic. He has paid his tribate to the tendency which Wagner made dominant, and indeed, has been somewhat too frank in his acknowledgment of his indebetdness to that master in falling into his manner and utilizing his devices whenever (as in the second act) there is a parallelism in situation; but he has nevertheless maintained an individual lyricism which proclaims him still the ingennous musician which the art never needed so much as it needs him now. And as a national colorist he has put new things upon the operatic palette."

#### STEPHEN PHILLIPS'S NEW LITERARY DRAMA.

N O play produced in London during recent years has been greeted with greater interest than that accorded to Stephen Phillips's "Ulysses," which was performed for the first time on February 1 at Her Majesty's Theater, with Beerbohm Tree in the tile role. As a spectacle alone the production is regarded as most noteworthy, and the gorgeousness of its seemary and costumes seems hardly to have been surpassed in the history of the English stage. The London Duily Expers considers "Ulysses" the "most strikingly imagnative production the present generation has witnessed," while The Duily Chronic strike speaks of it as a "grandly designed and well-executed play."

Mr. Phillips's new and ambitious drama is slivided into a prolog and three acts. and opens with a representation of the Pariassus of the Greek deities. It is felt in some quarters there is a dangerous approach to the burlesque in this "prologi in heaven," in which Zeus and the rest of the gods sit on Mount Olympus in solemn conclave, enveloped by purple mist; and irreverent critics have not been wanting to draw comparisous between "Ulysses" and the Drury Lane pantomime. "All the same," remarks the London correspondent of the New York Times, "the prolog is neither dull nor ridiculous, and the inevitable suggestion of the pantomime 'opening' does not matter." The Spectator has the following to say of the spirit in which Mr. Phillips has approached his subject:

"The author of 'Ulysses' has seized all the salient and essential points of the story, and has, with a wise indifference to the details of the Homeric legend, so long as he maintained the Homeric spirit, given us an acting play on the oldest, the most famous, and also the most moving, story that ever dealt with a wanderer's return. The yearning of the seafarer for his home and all that home means, for the sight of wife and child and friends, and of the kind land that gave him birth-that is the compelling, dominating motive of the play. And like a true playwright Mr. Phillips never forgets the mother-impulse of his scenes. Every line of the play is properly instinct with this motive and its accomplishment. It is a passion which suffuses the whole play from the first word to the last. To get home-that is the desire of Ulysses. To help him to that home is the care of Athene and the gods who are with her. To prevent him at every turn is the endeavor of Poscidon. To destroy his home by taking from it that which makes it home, the love and presence of Penelope, is what the suitors strive for unceasingly if unconsciously. To keep his home inviolate for him is the aim pursued by Penelope with a passion as steady and almost as resourceful as that of Ulysses himself. It is the will of his son Telemachus and even of the faithful swineherd, who in his humble tasks keeps always before him the preservation of his lord's house and home. Even in hell itself the contest does not cease. Agamemnon would, if he could, blast the whole idea of home with the hot breath of his own story. But the mother's voice, the home voice, allays the dreadful fever that the tale of Agamemnon's home coming has planted in the veins of Ulysses. His mother's voice tells him that his home is still home, but bids him hasten to relieve its terrible beleaguerment. And so Ulysses struggles on in his great endeavor till at last the victory is won."

"It is a real play," adds the same paper, "and it is real poetry. That is a conjunction not often attained in those days, and yet one that is absolutely necessary if the poetic drama is to live, and live worlhily." Max Beerbohm, writing in The Naturaday Review, localress that "Mr. Phillips seems to have left undone nothing that he could do, to make his play worthy of its theme"; while The Outlook (London) thinks that "the production of 'Ulysses' really marks an epoch, of which the worst that any one could say even on the first performance was 'beautiful but slow," and of which the 'slowness' may be banished, but not the beauty." Mr. Arthur Symons, the English poet, is more severely critical. He writes for The Academy;

"Mr. Tree's production of Mr. Stephen Phillips's 'Ulyssee', and Her Majesty's 'Theater, is full of interest for all to whom the poetic drama is of interest. The play was magnificently staged, capably acted, the verse was spoken with care, and, if it was drawled a little beyond neasure, that is a fault far more particular to the customary prose gabble. Mr. Phillips, as we know, is a writer of careful and often felicitous verse; he has a temperate charm, a graceful sense of epithet, a genuine poetic feeling; and he has a firm hold on his material: he can make his portry defined and the major to the might seem; is the true literary portry defined and the might seem; is the true literary moves; there are plausible characters, who speak in clear and elegant verse. What more do we want?

eleganic versity. White more to we want:

"We want something more, and, if we are to have great poetic drama, we must have this something more. Poetry so one hing, stagecraft is mother: and there are different kinds of poetry as there are different kinds of stagecraft. The action of 'Uysses' is the stage of the stag

The poetic drama, says Mr. Symons, "must be conceived as drama, and must hold us, as a play of Ibsen's holds ns. by the sheer interest of its representation of life." He continues:

"It must live, and it must live in poetry, as in its natural armosphere. The verse must speak as straight as prose, but with a more beautiful voice. It must avoid rhetoric as scrupulously as Ibsen avoids rhetoric. It must not 'make poetry,' however good in its way. Here, for instance, is one of the most effective speeches in 'Ulyssee,' for effective it certainly was, just as the Lalian arma was effective in the opera which it interrupted:

Then have the truth; I speak as a man speaks; Pour out my heart like treasure at your feet, This odorous, amorous isle of violets That leans all leaves into the glassy deep With brooding music over noontide moss. And low darge of the lily swinging bee, Then stars like opening eyes on closing flowers, Palls on my heart. Alt God! that I might see Gaunt Ithaca stand up out of the surge. You lashed and streaming rocks, and sobbing crags, The screaming gull and the wild-flying cloud :-To see far off the smoke of my own hearth, To smell far out the giebe of my own farms, To spring alive upon her precipices, And huri the singing apear into the air; To scoop the mountain torrent in my hand, And plance ato the midnight of her pines: To look unto the eyes of her who bore me, And clasp his knees who 'gat me in his joy, Prove if my son be like my dream of him

"Some of that is good descriptive verse, but it is all declamation, none of it is speech. Now, between declamation and dramatic poetry there is a great guil. The actor loves declamation, because it gives him: an opportunity to recite, and every actor loves to recite poetry. It provides him with a pulpit. He does not like to realize, any more than his author likes to realize, that every line of poetry which is not speech as bad dramatic poetry."

#### SCIENCE AND INVENTION.

# ARE THE LAWS OF MECHANICS EXACTLY

I S mechanics an exact deductive science, to be taught like geometry? Or is it based wholly on experiment, and to be so taught? The latter method obtains in England and the former on the continent of Europe generally. M. Poincaré, the eminent French mathematician, in a paper read originally before the International Congress of Philosophy held at the Paris Exposition, maintains that the English are regist. This paper, which has just appeared in the printed proceedings of the congress, is reviewed in the Kevise des Questions, Nicentifiques' (Louvain, Beigium). M. Poincaré's position appears to be that the laws of mechanics are wholly deduced from experience, of which they are an ideal expression. We can not be convinced of their rigorous exactness, tho we are right to assume it for practical purposes.

For instance, to quote the review:

"A body that is subjected to no force can have only a uniform motion in a traight line. Such is the principle of inertia, . . . which is not an a prior truth; for if we say that the velocity of such a body can not change because there is no reason for its change, could we not also maintain that the position of a body can not change without the action of some extenor cause? The principle of inertia is not therefore a self-evident truth; is it an experimental fact?"

The answer to this question must strictly be in the negative; all that we can say is that the more carefully we try the experiment and the more we remove obstacles, the nearer we come to demonstration. Again, take this principle: "The center of gravity of an isolated system can have only a uniform motion in a straight line." Can we verily this by observation? Evidently not, for no system of bodies is entirely isolated. Even the solar system is acted on by celestial bodies outside of it. We can, bowever, show that for a nearly isolated system the law is nearly true. M. Poincaré states his helief that it is not only innexible to obtain a rigorous proof of such a law as this, but it is absurd to ask it. As there is no such thing in nature as an isolated system, the question has no sense. The author failly concludes that the principles of mechanics present themselves under two aspects:

"On the one hand, they are traths based on experience and verified approximately so far as isolated systems are concerned. On the other hand, they are postulates applicable to the universe as a whole, and regarded as rigorously true. If these postulates possess a generality and certainty that do not attach to the experimental truths from which they are derived, it is because they reduce in the last analysis to a simple convention that we have the right to make because we are certain in advance that no experiment will ever contradict it."

On this statement the reviewer, M. Georges Lechalas, com-

"We do not think that this distinction is very philosophic. From the moment when we recognize that the principles of mechanics are established experimentally as approximately applicable to nearly isolated systems, their absolute formula, which is only the limit toward which the experimental results tend, depends on these and may be modified by the discovery on the pends on these and may be modified by the discovery on the moment. To escape from this conclusion we must undermine, at the foundation, the value of all our verification."

This whole question is by no means new, and there will probably be always two opinions on it. Probably M. Poincaré's position will be regarded by teachers as an attempt to sit on the fence—to acknowledge that the basis of mechanics is experimental and at the same time to justify the point of view that regards its laws as absolute, like those of pure mathematics. The

practical solution of the problem adopted by most teachers is to teach young pupils the laws as exact and discuss with older ones their possible departure from accuracy and the basis on which they rest.—Translation made for THE LITERARY DIGEST.

#### MEN WITH TAILS.

OCCASIONAL stories of tailed men appear in the daily papers and are dismissed by the average reader as obviously mythical. If we may believe a writer in The Intrition Medical Journal, however, there are many perfectly anthentic instances of men with tails, altho such appendages are, of course, abnormal. He thinks it probable that all human tails have been the results of developmental errors, and that they furnish no evidence of a relationship between man and the apea. They occur just at the terminal point of the vertebral column; and at such points nature is apt to "hesitate about the manner of ler modilings." She may add an extra two or finger to the foot or hand, and one vertebra too many or too few is hardly regarded as abnormal. The writer goes on to say:

"Remembering these gradations and abnormalities, it is not difficult to go a little farther and understand how an occasional human tail may come about. But such a departure is, nevertheless, very nncommon, and excites much comment when it occurs."

Quite the latest tail, the writer goes on to say, was described in The Dritish Medical furnal, August 24, 190t. The tail consisted of nothing but areolar tissue and fat, with vessels and nerves and a few muscle fibers, but there was no trace of any-thing like the vertebral column. It was mobile, and when it was removed at the age of six months was of the length of 7 centimeters [three inches].

In L'Antropologie (tome vii, No. 3) there is a very detailed account of an encounter with a tailed man. M. Paul d'Enjoy, traveling in the Indo-Chinese region in 1850, captured a member of the Moi race who had "a caudal appendage." He is sauit to have climbed a tree after the fashion of a monkey, to have conversed with M. d'Enjoy and his companions, and to have "awagered in his savage pride." Nature, in commenting apon this description, observed that it must be treated with respect, but hoped that it would not be long before these tailed men were carefully described by a trained scientific observer. It is now more than ten years since this so-called tailed race was described, and apparently no corroboration of the universality of a caudal appendage amongst these men has been fortbooming.

Bartels, who collected accounts of all known cases of tails in man, shows that references to them extend as far back as Pliny, the cites a community of tailed men in Turkestan, who were held in contempt and condemned to constant intermarriage. The tail was in this case considered as a curse, in that it hindered the possessor from sitting properly on breselack.

Some "tails" are appendages of skin containing subcutaneous fat, others are tumors. Schäffer, who has recently and thoroughly investigated the subject, believes that most, if not all, "true tails" arise from anniotic adhesions. These are usually "soft tails." A few contain a prolongation of the coccygeal vertebrae.

There is no description of a human 'skeleton, the writer in Nature goes no to say, whether we are dealing with prehistoric or with modern man, with more than five exceygeal vertebrace. One finds an occasional added rit, or metatareal or metatorical bone; but, in spite of all the talk and comment about the human tail, the exceygeal vertebrac appear to vary only by deduction and not by addition. There may be five vertebrac, more usually four or threes.

The spinal skeletons of such creatures as have existed previously to prehistoric mammal record, and which have gone on

through the ages, and are still to be found, retain their special skeletal characters of species. Use, dismes, and altered surroundings will not of themselves account for the pensistence of those characters of the human or general verrebral column which have existed ever since the skeleton has been examined. An occasional true tail reversion would be a reasonable expectation if the human family has really branched off from an anthropoid or apa ancestry; but the converse observation is the correct one, for a tail is no tail without a vertebral or notechoral support.

It appears almost as if all so-called human tails that have been scientifically examined might be placed in the same category of anomalies or almormalities wherein we should put the old tags of skin and arother tissue that may develop from any other part of the body. Every surgeon in the course of his life must have seen such a developmental error; some of them almost partake of the nature of misplaced or added organs, and may be classed with the superminerary ears, breasts, nipples, etc. Dr. Harrison's tailed infant had hairs upon the surface of its candal appendage, and superminerary fingers often have mails, but neither fact helps us to work out our descent.

For the present, in this twentieth century, it seems wiser to regard the older stories about tailed men as being mythical, and to regard the trained observations and examinations of the more recent anomalies as pointing to nothing more tail-like than is indicated by similar anomalies which occur with greater frequency in various other parts of the body. They may be simple developmental errors with a special halo of romance about them on account of their position.

#### THE CAUSE OF BALDNESS.

A WRITER is a comic paper receutly suggested that as microbes had been shown to be the cause of almost every known disease, it was in order for some one to discover the bacillus of baldness. He did not know that this very thing had been done and that his joke was soler earnest. The microbial and contagious character of most chronic cases of baldness has now been well established. The discuse has been thoroughly discussed by Dr. Sabourated in a recent book published in Paris, and some of his conclusions are given in La Nature by

MICRORACILLUS OF BALDNISS.

Dr. A. Cartaz. One of his most striking conclusions is that buildness, as a chronic malady, is a discase not of old age but of youth; in bald old men we simply see the results of a discase that has been slowly doing its work for many years. Says Dr. Cartaz.

"Baldness is a

contagious disease caused by a microbe. A point that the author has not touched upon, and which seems of great importance, is the question of what subject is fitted to receive the bacillus, to farmsh on his head a good soil for its growth, while his neighbor keeps his hair until his last hour. Buildness selohan attacks women, or, at least, it is exceptional among them, and is produced in the majority of cases by other causes than those of the common malady. . . . . . . . . .

"Must we invoke, as in the case of many other diseases, a special resistance, a peculiar state that renders the subject reactory? Probably. We have not all, to an equal degree, a receptivity even for centagions disease, and there is a considerable number of subjects who are exposed to contagion without being attacked. It is probably the same with baldness. But never-

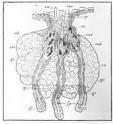

theless, it is curious that only men should become bold. Is it their long hair that preserves the women? Then we should return to the habits of our long-haired ancestors. . . . Balditees is a disease whose general and local causes are numerous, but which is closely allied to a very common skin disease called solverthen.

"The skin contains not only the sudoriferous glands which se-

crete sweat, but also
the sebaceous
glands, which produce the oily matter
that lubricates the
skin. Exaggeration
of the function of
these glands gives
rise to the disease
called seborrhea."

This disease, Dr. Cartaz goes on to say, is due to a specific microbe that lives and multiplies in the sebaceous glands and causes baldness by its action on the roots of the huir. To quote again:

balilness is an affec-

ALTERATION OF HAIR FOLLICLES IN CHRONIC BALDNESS.

again:

"So far from being a disease of old age,

"Se far from being a disease of old age, and the selections of the following selections."

"The selection of the following selections of the following selections of the following selections."

tion of youth. Babluess begins in the young and increases, whether rapidly or slowly, up to the fittieth year. Bald old men have been bald young men; their babluess has no been cured—that is all. Seborthea, which shows itself in many subjects by disagrecable cruptions on the face and forehead, known as 'acne,' determines, when it nttacks the scalp, first a limited, then a more extended, and finally a batal baldness.

"Baldness, then, is a contagious disense of microbian origin. Must we therefore reject all the other causes that have been signed for the loss of the hair? Assurelly not, and the best proof is that the dwellers in the country number much few latd men than the inhabitants of cities. Why? It is because their sanitation, all things considered, is better than ours; their is meteorated and men the mental of the frugal living give strength to the norganism and a more normal and regular constitution. Diabotations, is less frequent in the country than in the city. ... Bad sanitation, intellectual overwork, lack of plays a center of selection of the destructive bacillus of selection to that of the destructive bacillus of selectives.

"If balduess due to seborrhea is a microbian disease, it must then be curable. Alas! we can hold out no hope to the victims that await its cure. Seborrhea is a chronic infection, and we can not expect to destroy radically all the microbian colonies that have established themselves in the sebaceous glands. Altho we can achieve no radical results, however, we can stop the progress of the invasion and limit the field of disaster. A thousand and one antiseptic preparations have been tried, but we always must and should proceed with caution. Some scalps are easily subject to inflammation on contact with certain substances, and we shall run the risk of producing an irritation more grave than the disease itself. We must act with prudence and . . . seek the advice of experts. Perhaps some day when the nature of the disease has been well determined, we may, if the hair follicles have not been destroyed, find a means of restoring their vitality and to cause a growth of hair on a buld head. For the present, however, the we may ameliorate and check the disease, we can not repair the damage that it has done."- Translation made for THE LITERARY DIGEST.

The Passing of Iron,—"It is worth noting," says a writer in Cassier's Magazine, "that the higher the grade of civilization, the more iron and steel are used per capita. It may be a matter of interest to know which has the supremacy, tron or steel.

If we take the United States, we find that in time of depression Bessemer steel is sold at a less cost than mu, including bars, rods, sheets, plates, skelp, etc. That steel sunts all the requirements of iron, except for rare cases, is evident, seeing that within the last five years, in spite of all the prejudices against using steel, ... the two largest manufacturers of iron bars up to that time commenced rolling nothing but steel, and to-day the quantity of seed bars sold by them is double the quantity of iron bars, iron skelp, iron sheets, and iron tin plates formerly turned out by them. Iron is a thing of the past, and every panie or depression in the iron, and steel trade helps to push it further into the background."

#### STALACTITES IN A CELLAR.

That stalacties ean form in a comparatively short time under favorable conditions is shown by a recent discovery in Paris, where an old cellar was found to have filled with them in thirty-six years. This phenomenon is described in La Nature (Paris, Ianuary 25) by M. Stanilas Meuner, who pre-

STALACTITES FORMED UNDER THE MOSTPARNASSE STATION, PARIS, BETWEEN 1869-18-0.

faces his article with a general account of how stalactites are formed in nature. Says M. Meunier:

"Everybody knows what stalactites are, and even if we have not seen them in nature or in museums we have at least admired them in photographs. It is well known that they are columns of stone that descend from the ceiling of certain caverns and by their grouping give to these subterranean galleries the appearance of Gothie cathedrals.

"The way in which these picture-sque columns are produced is well known. They are always mer with in strata of lineations, and there is no doubt that these rocks furnish the substance of which the stalactites are made. The active agent in their production is the carbonic acid dissolved in the infiltrated rain water; this acid cats the limestone through which it trickles and forms bicarbonate of line, which is soluble in water. The solution thus produced is carried through the ground till it reaches a cavity where it may be partly or wholly evaporated. Generally this condition is realized at the roof of a cavern or grotto; the drop of liquid hanging from the rock gives off its carbonic acid, the carbonate of line resumes its former state, and as this is insoluble it crystallizes in a little ring which forms the germ, as it were, of a stalactite. The successive drops enlarge the deposit, which thus grows wider and longer, while preserving as its uxis the channel by which the water arrived.

"Formed thus, the calcareous substance is necessarily free from foreign nature, with the exception of coloring matters, epecially carbonate of iron, which times it with yellow or red, and analogous compounds of greenish hue. So it is often very beautiful and under the name of onyx is much sought for ornamental narroses.

"Ordinarily, the concretion of a stalactite does not take place without some of the liquid failing on the ground and fornige there also a growth that enlarges from below upward to meet the stalactite. This is a stalagnite, and finally the two next and fuse together, making a sort of column that seems to be holding up to troof from which it descended. The stalactite material also that the place of the stalactite material also great ingrest for the stalactite material also great the stalactite material also that happen to be thereon; there results a 'breceia' that has great ingrest for us, as it preserves specimens of the hones of

extinct animals and even the entire skeletons of fossil men, together with their arms and tools, and works of art of which our first ancestors were the

"Now all the essential characteristics of ordinary stalactics are reproduced in the specimens that I am about to describe, and there would be nothing remarkable about them if they had not been produced in altogether exceptional conditions. In fact they were not taken from a cave, but from a sort of trailway station, where they were formed in a remarkably short time."

This disused cellar, we are told by M. Mennier, had been partly filled with earth and wailed up from 1863 till 1899, and when it was opened in the latter year more than 500 complete stalactites were found, together with as many others that had been broken by the workmen. Says M. Meunier:

"To understand how these remarkable objects came there, in this short interval of thirty-six years, we must note that the cellar had not been completely filled; a comsiderable space was left above the mass of earth and under the cuiting, which showed very evident of the completely filled; a comsiderable space was more considerable space with the cuiting, which showed very evidence that could be completely supported by the complete of the completely supported by the complete of the complete of the completely supported by the completely support of the completely supported by the comple

the liquid was augmented by its special composition.
"The space that thus became a stalactic cavern was directly
under the court-yard built in 1863. The rain-water converged
thither, and mixed as it was with animal exerct acted strongly
on the mineral substances and brought about a very rapid formation of stalactive.

"The stalacities are characterized by great friability, luminated activities, and slight density. When dissolved in hydrochlorie acid the gas set free has a very decided organic odor. Also, a fragment heated red-hot on platinum foll blackens and thus betavas the presence of other substances than earbonate of lime.

"These facts are the more interesting to note, in that they are so closely related to natural phenomena."—Translation made for The LITERARY DIGEST.

The Cape-to-Cairo Telegraph,—Some interesting details are made public regarding the construction of the British telegraph line from Cape Town to Cairo, planned by Mr.

Rhodes, and giving an alternative land route to England over the Egyptian system. Says The Electrical World and Engineer:

"The line has now been completed as far as Ujiji, on the Eastern shore of Lake Tanganyika, so that messages may now be sent from Cape Town about 2,500 miles north. The wire has been strung on insulated iron poles sent out from England. Of course, the wild nature of the country has made the work difficult, for it has been necessary to transport all material by human or animal portage for hundreds of miles. Five parties are engaged in the work, the total force averaging 10 white men and about 1,200 blacks. The advance party, consisting of 2 whites and 200 natives, has charge of surveying the route and clearing a path f r it about 15 feet in width. The second party follows two or three days after and widens the path to 60 feet, more or less, according to the nature of the country. It is easy to see why so wide a path is necessary. There will be no lineman every few miles to keep the service in repair, and it will be far more costly than in civilized lands to mend a broken wire or repair other damages. Every preliminary caution, therefore, must be taken. Then comes the third party, which digs the poles; it is closely followed by the fourth detachment, which plants the posts; and, finally, come the wire stringers, who complete the work. None of the iron posts weighs less than 160 pounds, and most of them are 14 feet high. For some time the work has been carried on in German territory, as the line passes completely through the western part of German East Africa. It was necessary, of course, to secure the consent of Germany to build the line through its territory, and the Trans-African Telegraph Company, as it is called, agreed as a part of the bargain to build a separate line across German East Africa from north to south, to be the property of the German Government and to be used wholly for the telegraph traffic of the German colony. The Government will connect its ports on the coast with the Ujiji station of the line. This great enterprise will now be pushed northward into British East Africa and down the Nile as far as Fashoda, which is connected by wire with Khartum and Alexandria."

#### THE FATE OF NIAGARA.

M ORE and more of the water of Niagara Falls is being drawn off for industrial purposes. The immense installation on the Canadian side is now adding its demands to that of the hoge American plant, and the electrical papers are beginning to suggest that in the light of our present knowledge, Cleveland, Detroit, Columbus, Cincinanti, and even Chicago and New York are within striking distance of the Niagara central station. Says The Electrical World and Engineer (February 8):

"How far transmission of huge amounts of power to these points would pay is a matter which can not yet be determined, but the next few years will show clearly enough how the work can be done when it becomes desirable to attempt it. The effect of the Niagara power on Buffalo and neighboring cities is already manifest, and perhaps the whole immense output of the plant can be ultimately utilised, not so much by transmitting itries about it. Power transmission them neans only local distribution to a manufacturing metropolis spread out over a thomsand square miles of territory."

When the question of the ultimate fate of the Falla was first raised, it was brushed aside by the technical papers with the remark that the abstraction of all the water likely to be required for power would hardly make an impression on the huge mass of water at Niagara. Now they have grown boilder and say that even if the signs of the time point to the total annihilation of the Falla as a thing of beauty, their place will be taken by that which is of much greater practical value to mankind. Besides this, The Electrical World tells us, the Falls were spoiled on gao by their sordid surroundings, and we may be pardoned for doing away with them altogether. Says the editor:

"The voice of prophecy has been already raised to foretell the

day when the fall itself will be only a trickling sheet, and when great national holidays may be celebrated by turning the water for a few brief hours from the canals back to its natural channel. The men who have created the splendid power developments there are called iconoclasts and vandals who rend nature limb from limb for dirty pelf. But, truth to tell, Niagara was from every esthetic point of view wrecked long before the pick opened the work of the Niagara Power Company. Ill-kept factories. garish barns of hotels, patent medicine advertisements, shanties of evil aspect and worse repute, had made the greatest cataract in the world an eyesore and reproach years ago. Even the strong hand of the State was stretched ont too late to save, and man's petty avarice had undone already nature's best work. To turn the stream thus defiled into a blessing for the world's work ers is a worthy deed, a thing to be applauded. Had wise men taken the Niagara region three-quarters of a century ago and guarded it so that none of man's handiwork should visibly infringe on the eternal majesty of the scene, then would the mighty fall have been saved to art. Failing in this, it has been redeemed from vandals to the great service of industry. It will be many a year, perhaps many a century, before Niagara ceases to be a natural wonder of the world, and long ere that it will be the greatest monument of man's victory over natural forces. Why should any one wish a better fate for it, since it had been already cast aside? In fact, if one looks far into the future, the work of utilizing the cataract may be its salvation. Even within the memory of man it has suffered greatly from erosion, and sooner or later it was bound to work its way westward, bringing disaster unless saved by interposition of human aid in controlling its fateful march. One day a future generation may wake to the realization that the Niagara tunnels saved the Great Lakes."

Effect of Color on Mosquitoes,—The Anopheles mosquito, according to recent experiments referred to in The Dietettic and Hygienic Gazette, is attracted by some colors and repelled by others:

"The experiments were conducted in a large gause tent, one and of which was formed by large windows into which the sunlight poured on bright days. Large stone basins were placed on the flow for the Anapheles to breed in. At the beginning it was the flower of the Anapheles to breed in. At the beginning it was clothes, the mosquitous settled on the dark cloth; but that they ever did this when the person entering was clad in white flannels. A number of boxes lined with cloth of various colors were placed in rows on the floor, and it was noticed that the mosquitous and, in less numbers, would eater boxes lined with cloth of the placed in rows on the floor, and it was noticed that the mosquitous in the following order: dark feel, brown, scarlet, black, slate gray, olive green, violet, leaf green, blue, pearl gray, pale found in the box lined with yellow. As practical applications of these experiments, it is to be noted that the khaki unform should offer advantages in addition to being invisible to the human offers advantages in addition to being invisible to the human very well be lessened by the choice of suitable colors applied to the walls. A trap might be made, lined with dark blue, in which the insects would congregate, so that they could be readily de-the same to be also the mosquite favorite.

"THE little black or red ant of the temperate sone," says The National Druggist (February), "is generally regarded as a nuisance, but not as an insect that can offer any danger to life or limb. An incident that hap-pened the other day at Schlang, Bohemia, however, shows that under certain circumstances the little creature may become a serious menace, to the life of children at least. A peasant woman going ant to labor in the fields, after nursing her infant, laid the baby on the ground in the shade and went After a little time the child began to cry violently, but the mother, thinking that it simply wished to be taken up, paid an attention to it. The cries increased in violence at first, but after a while the child seemed in get quiet, and soon the crying ceased entirely. finished her task and returned to the baby, to find it covered with millions of ants, which had eaten out the eves and filled the cavities of month, nose, and ears. They had eaten through the walls of the stomach, had filled the esophagus, the laryna, and, in fact, occupied every cavity or passageway in the body. The baby was dead, of course. We remember hearing of a similar incident that occurred in Alabama about the time of the Civil War, where a child of a year and a half or two years strayed from the camp of its mother, a widow of the poor white class, moving her effects back to her old home, and was lost. After a search for it, which lasted for several days, the remains of the child were found on an ant-heap or nest. Little was left, however, but the bony skeleton. Such incidents are, fortunately, exceedingly rare, but the fact that they may occur abould not be lost sight of, and should be better known commonly than they appear to be."

#### THE RELIGIOUS WORLD.

# DR. PARKHURST ON CONDITIONAL IMMORTALITY.

THE Rev. Dr. Charles H. Parkhurst, of New York, has recently aroused much interset in religious circles by preaching a series of sermons on conditional immortality, in which he takes the position that man is "immortable," rather than immortal. His attitude is explained in the following words:

"It appears to be imagined that if one can get past physical death without his sonl ceasing to exist, the everlasting duration of his sonl's existence is thereby insured. That is taking a good deal for granted.

"The very expression, a 'live soul,' is rather immediately suggestive of a dead soul, and there is a great deal in the Bible, even, about dead souls, souls that have been alive, but have died. 'The soul that sinneth it shall die.' 'Sin, when it is finished, bringeth forth death'—not the death of the body, but the soul's death. 'The wages of sin is death.' I assume that those expressions mean what they say.

"There is nothing in Scripture or in things that encourages us to feel that a soul can be kept from dying any more than a bodly, unless it is taken care of. There is no warrant from Bible or from nature for supposing that a soul carries within itself a policy of insurance against its own eventual obliteration. We may be immortal, but if we prove to be such, it will be because we have succeeded in being such.

"So if—and there is nothing to disprove it—it is the intention of nature that a soul should reach that spiritual longevity expressed by the word 'eternal,' the soul will have to pay for the superb presogative by fulfilling the conditions, and taking sold care of its spiritual health. Once you begin to respect the intimations of nature and to regard the suggestions of God's word, you discover that while the mere doctrine of immortality may be settled by philosophical or theological argumentation, the question whether you personally will be immortal is going to be settled by voi."

This point of view is not a new one. It is elaborated in a recent book by the Rev. Dr. S. D' McConnell, the well-knew Brooklyn minister; and as long ago as 1878 the Rev. Dr. W. R. Huntington, the present rector of Grace Church, New York, published a book on "Conditional Immortality." The Rev. Frederick S. Boody, writing on the subject in the Boston Wachdeman (Bapt.), thinks that the doctrine "is not to be dismissed with a word." He continues:

"The advocates of conditional immortality call upon us to produce reasons for our belief that irrespective of his relation to God, his personal character, his usefulness or unusefulness in the universe, a man is capable of living forever. The words of a recent writer seem fair: 'If science does not discover, or phillosophy prove, or revelation teach man's natural immortality, then the words of Scripture must be interpreted in their natural and ordinary meaning, and we must seen "Teatment that "the wages of sin is death, but the free gift of God is eternal life in Christ Jesus our Lord."

"Who shall say that science has discovered the natural immortality of the race? If it be 'a colosai instance of baseless assumption' that the life of the soul ends with the life of the body, the opposite hypothesis is equally in the realm of the unknown. There is no scientific evidence for either view; for all philosophic cal reasonings concerning the probabilities of humanity patient death are manifestly in a region that transcends human experience."

A vigorous expression of opinion from the opposite side of the argument is that voiced by *The Star of Zion* (Charlotte, N. C.), the official organ of the African Methodist Episcopal Zion Church. It says:

"A pious shudder runs over the Christian Church as it reads this erroneous, diabolical, and damaging theory that the soul is not immortal, and it will await with anxiety to see whether the noted divine, regardiess of his profundity of learning, will be tried for heresy or not. The only way that he could escape trial and be unfrocked in the Methodist Church would be by proof of his insauity and irresponsibility.

"The immortality of the soul is a doctrine bolieved not only by all orthodox Christians and every one size who has good common sense, but is indisputably established by facts drawn from the Scriptures, the light of nature and reason and other sources. If one will study closely the origin, nature, powers, and faculties of the soul, he will find that it is not subject to death either from anything within itself or without it. The human body, being mortal, is subject to death; but the soul, the immaterial part of man, bearing drivine resemblance, especially in immortality, beturn its existence, and is beyond the reach of famine, lunger, sword, bullet, poison, or anything in this world capable of producing death."

#### WORK OF THE PRESBYTERIAN CREED RE-VISION COMMITTEE.

THE Presbyterian Creed Revision Committee, which was in session during the early part of December in Washington and has lately been meeting in Philadelphia, has come to a decision on several important dectrinal points. Before adjourning to meet again in Washington on April 9 an official statement was made as to the work accomplished, it being understood that the changes recommended are subject to the approval of the Presbyterian General Assembly, which will be held in New York next May. The aunouncement made on the two most important points, the doctrines of predestination and "infant damnation." is as follows:

"The committee has decided upon a form of a declaratory statement on the third chapter of the Confession of Faith, declaring that the doctrine of predestination is held in harmony with God's love for all mankind, and that no man is condemned except on the ground of his sit.

"It also adopted a declaratory statement as to the phrase elect infants, 'declaring that the Presbyterian Church does not teach that any dying in infancy are lost, but that all dying in infancy are included in the election of grace. The members chief that American Presbyterians ever taught the doctrine of infant dammation."

Later, the committee announced that it had decided to recommend the elimination from the Confession of Faith of the statements that works done by "unregenerate" men are "sindla"; that it is "a sin to refuse an oath touching anything that is good and just being imposed by Jawfal authority "; and that the Pope is a "man of sin." It also added to the Confession two chapters on the Holy Spirit and on the Gospel, and adopted five articles of the new statement of the Reformed Faith that is being prepared. All that now remains to be done is the completion of this brief statement, which is intended for popular us.

In reviewing the work accomplished by the committee, The Congregationalist and Christian World (Boston) says:

"The public is not now profoundly interested in the result of its deliberation. Revision is already accomplished by natural processes of study and the progress of Christian knowledge, tho the task of making a formal statement of the result may not be easy. The discussion of the matter, which was at first deprecated of denounced by many, has gone on with increasing freedom until passion has died away and calm reasoning is guiding the denomination to a new sense of unity. The revision committee was instructed 'in no way to impair the integrity of the system of doctrine set forth in our Confession and taught in the Holy Scriptures.' But the necessity for revision lay in the fact that the integrity of the system was impaired and contained things not taught in the Holy Scriptures. The commission was instructed to add statements' concerning the love of God for all instructed to add statements' concerning the love of God for all sinteracted to add statements' concerning the love of God for all

men, missions, and the Holy Spirst. These additions will destroy further the degree of integrity there is in the Confession, unless certain important omissions are made. But the reassuring fact in this chapter now approaching completion in the history of creed-making is that a living clurch will surely slough of her outworn and outgrowing garments, however sacredly they cannot be supported by the control of the control of the therefrom. The Westminner Confession design and whatever new creed is proposed will have abiding recognition only so far as it does represent that belief."

The Chicago Interior (Presb.), thinks that the most important part of the committee's work, that of completing the brief statement of the reformed faith expressed as far as pessible in "untechnical terms," yet remains to be done, and goes on to say:

"It is evident that on this point the committee could very easily offer the church a rather empty form of words. The phrase 'untechnical terms' might be used as the excuse for drawing up a general and vague document to express what it understands to be held by the rank and file of church-members as distinguished from office-bearers. But that a series of commounlaces put into liturgical language no matter how beautiful is not what the Assembly meant the committee to draw up, is evident from the words we have already quoted from the Assembly's instructions. . The proposed statement should be such that it can stand side by side with the Confession of Faith and the Catechisms. and the not used, as the instructions of the Assembly to the committee go on to specify, 'as a substitute for, or an alternative of, the Confession, 'it should set forth what are deemed to be the cardinal and distinctive features of the reformed faith. The selection of the phrase 'Reformed faith' instead of 'Calvinistic system' or 'system of doctrine taught in the Westminster Confession," we take as a happy one. If the idea involved in it is carried out, it would give the Presbyterian Church in the United States the opportunity to rise out of provincialism and stand out as the representative and leader in a movement to unite the thought of the Reformed churches of the world.

The American Irractite (Cincinnati) thinks that the declarations of the revision committee on predestination and "elect infants" show a tendency toward dispensing with a "belief in the superhuman origin and divine mission of Jesus as an essential to salvation," and with "the necessity of baptism"—"truly a wonderful step forward for the Presbyterian Church to make," it exclaims. The Are Maria (Note Dame, Rom. Cath.) observes:

"A brief statement of latter day teaching and an explanatory appendix are the tasks confronting the revision committee. That, it strikes us, will do very well for the present; but before the twenty-first century opens another revision committee will arise and perform an operation for appendicitis; and statement and appendix together will be cut off. It is the history of the sectua-the changefulness of error."

The New York Mail and Express says:

"A matter of moment to the whole world of thought is the action taken this week by the revision committee of the Presbyterian Church upon the Westminster Confession. For a hundred years criticism has stormed upon the Presbyteriaus because of the doctrines of 'infant damnation,' 'good works,' and predestination. They faced attack in true Covenanter fashion, dourly and silently, firm in their faith and making no complaint because that faith was misunderstood and misjudged. 'That is a fine thing to do. But they do a finer thing to-day. For they open their hearts to the Christian world and, in substance, say: Brothers, you have done us a wrong. It is your fault, in that your judgment was superficial and hasty; it is our fault, in that we were not, before now, frank with you. We have nothing to recant; nothing to retract; nothing for which to make excuses. But, if you listen, you will learn that our ereed is not the harsh. old, iron, cruel thing you think it." That is the spirit of their present speaking. And that spirit is ever a happy augury for Christianity."

# THE PERSON OF JESUS AS VIEWED BY THREE EMINENT BIBLICAL SCHOLARS.

HEN the second volume of the Hastings "Dictionary of the Bible" was published two years ago in England, widespread attention was drawn to the article on lesus by Dr. Sanday as not only the gem of the volume, but an ornament to the entire work. Since then even more attention has been evcited by a corresponding article from the pen of the late Dr. Bruce in the "Encyclopedia Biblica," edited by Professor Cheyne and Dr. Sutherland Black. And, still later, in the ninth volume of the new third edition of the kindred work of reference in Germany. Hauck's "Realencyklonädie für protestantische Theologie und Kirche" (1901), the article on the same subject, by Professor Zöckler, has challenged special attention because of the fact that it appears not in its alphabetical place in the preceding volume, but is used as the opening article of the present volume. "These are indications," declares the Rev. Dr. James Stalker. of Glasgow, Scotland, "of the paramount interest which this subject has at present for the public mind; the writers to whom it has been entrusted in these three works are men of conspicuous knowledge and ability, and it may be profitable to compare the modes in which they have acquitted themselves of their task," Proceeding to a consideration of the articles, in the order named, Dr. Stalker confesses to a feeling of great disappointment in regard to Dr. Bruce's exposition. It is too "cold," too rationalistic too "apologetic," Dr. Stalker writes in The Biblical World (Chicago, January) :

"Dr. Bruce's performance has created something like consternation among his own friends on account of the negative tone by which it is pervaded; and this has been felt to be the more painful because, through the lamented author's death before its publication, it has come to the public with the air of a last will and testament. Certain Unitarians have been claiming it for their own and using it for their peculiar purposes, forgetting that, if it were really as they suppose-if one who up to the day of his death had eaten the bread of a Trinitarian church had left behind him a legacy of Unitarianism-the scientific interest of the incident would disappear in the intportance of the article as a document in estimating the author's character. They might have been restrained by the very first words, in which I esus is spoken of as not only the author, but the object, of the Christian faith, and there are plenty of other judications throughout the article which prove to a discerning eye that the distinguished author had no intention of turning his back in this last product of his

pen on the testimony of his whole preceding life. 'It can not, however, be denied that the representation of Jesus is humanitarian, while the references to his higher claims are most meager. . . . No doubt the ethical teaching of our Lord is that which lies most conspicuously on the surface of the Gospels : but one misses in Dr. Bruce's pages almost any reference to those subtler elements of the teaching of Jesus in which the Christian Church has always believed the most solemn and moving part of his message to be. There is hardly a word on the relation of Jesus to God or the significance of his death. The great text in Matt. xi. 25 is referred to, but not with anything like the impressiveness of writers like Wendt or Keim. Dr. Bruce says that what the primitive Christians asked about Jesus was, first, what he taught; secondly, what he did; and thirdly, what he suffered. But what the hearts of men from the first asked was, who he was, and with what object he had appeared in this world; and without a doubt it was to the belief that in him the eternal love had incarnated himself for the purpose of taking away the sin of the world that the Christian church owed its origin and its permanence."

Professor Sanday's atticle is described as "descriving all the praise which had been so liberally bestowed upon it." In fact, "it would be difficult to find a parallel among the articles of any encyclopedia to the thoroughness and fineness of its work." Dr. Stalker continues:

"Professor Sanday has not only read widely and reflected long, but has made up his own mind, and it is seldom that he declines

to express a decided opinion. His judgments will confirm the convictions of those whose minds are confused with the din of controversy, while they will command the respect of all who have reflected on these topics themselves. He assumes from the first the attitude of a Christian believer, and nothing is more remarkable in the whole performance than the delicate fervor of faith that is combined with fidelity to facts and fairness toward the opinions of others. He holds that Jesus was from his baptism perfectly conscious of his messianie vocation, and resolved to found the kingdom of God upou earth; but he had first to transform the conceptions of the kingdom entertained by his contemporaries; and this delayed his full manifestation of himself, while it accounts for the comparative rarity of testimonics from his own lips in the Gospels. But his work, toward the close, centered more and more in his own person, and he spoke about himself with growing freedom. . . . Professor Sanday writes with unfailing reverence and with pride in his authorities, being evidently glad when he is able to vindicate their absolute trustworthiness and surrendering their testimous even on little things only with hesitation and dislike. Here lies the deep gulf between a believing and disbelieving treatment of the record, as Delitzsch pointed out in the theological literature of his own country; and it looks as if it may soon be the line of demarkation in the religious literature of this country also,"

If the strong point of Dr. Bruce's article is the exposition of the ethical teaching of Jeans, and that of Dr. Sanday's the description of the actual state of the discussion, the strong point in Dr. Zückler's article is its "registration of relevant Ricrature." Apart from its exhaustive history and analysis of the literature relating to the life of Christ, Dr. Zückler's article is decidedly the most orthodox of the three. On this point Dr. Stalker says.

This is not the only indication furnished by the new edition of the greatest theological encyclopedia in the world that there are large sections of the learned world in Germany on which extreme views in criticism have made little impression, and that, in the conflicts lying before us in this country and America, we may be able to fetch our weapons of defense from the country which we have been wont to think of as the source of all that is arbitrary and extreme. While giving very fully the history of the criticism of the 'sources,' Zückler himself does not acknowledge any varying scale of values as belonging to the four Gospels or to any portions of them. At the most, he only acknowledges a certain subjective element in John's reports of our Lord's discourses, and of course he recognizes that one of the evangelists is more important for one purpose and another for another; but, while even Dr. Sanday speaks freely of the mistakes of the evangelists, I do not remember that Dr. Zöckler acknowledges a single real discrepancy, unless it be in the date of the Last Supper, where he prefers the account of John. He goes so far us to say that nothing but prejudice stands in the way of believing that Matthew may have produced our first Gospel as it stands by translating his own logia into Greek and furnishing them with historical settings. His belief in the traditional view of Jesus adopted by Christianity is no hesitating one, but confident and full-blooded, and he writes as one who knows himself able to give an account to all comers of the faith that is in him."

Prayer and Wireless Telegraphy,—Canon Wilberforce, of Westminster Abbey, enunciates a novel but suggestive theory of prayer, when he asks if it is not reasonable to suppose that prayer may be a kind of apiritual wireless telegraphy. He says (in St. Jehn's Parish Magazine, London, January)

"Interessory prayer is that divine essence of soul union, that heavenly ministry, which laughs distance to score and ereates a meeting place in God for sandered hearts and lives. I can not analyze it and reduce it to a proposition; but neither can I analyze the invisible fragrant vibrations which proceed from a bunch of violets, and which will perfume a whole room. I can of analyze the passage through the air of the dots and dashes of the Marconi system of wireless religraphy. But I know that interession is a current of the breath of God, starting from your own soul, and acting as a dynamic force upon the object for which you pray. It sets free secret spirit influences (perhaps

the Father's mighty angels, that excel in strength, who can sav?) but which influences would not be set free without the intercession. I can well understand Mary, Queen of Scots, saying that she fenred the prayers of John Knox more than an army of 10,000 men. Why should not intercession be part of God's regularized workings as much as wireless telegraphy? Why should it not be a natural law, and none the less spiritual because natural? Such forces do exist-call them thought-transference, psychie sympathy, spiritual sympathy, spiritual affinity, what you will. These forces of influence between man and man, acting independently of distance, are rapidly claiming recognition from the physical investigator. Why should not intercession be one of these secret affinities, appertaining to the highest part of man, and acting, by divine natural law, directly mon the object prayed for, originating from the divine nature in you, and passing, full of the infinite resources of God, directly to the one for whom you pray?"

#### THE CREED OF A MYSTIC.

R ALPH WALDO TRINE, the nuther of "In Tune with the Infinite" and of other ethical books that have been widely read in the United States and in many foreign countries, contributes to

"Hind (New York, February) "A Sort of Creed," in which he expresses his philosophy of life. It is as follows:

"To live to our highest in all things that pertain to us:

"To lend a hand as best we can to all others for this same end;

"To aid in righting the wrongs that cross our path by pointing the wrong-doer to a better way, and thus aid him in becoming a power for good;

"To remain in nature nlways sweet and simple and humble, and therefore strong; "To open our-

selves fully and to keep ourselves pure and clean as fit channels for the divine power to work through us;

"To turn toward and keep our faces always to the light;
"To do our own thinking, listening quietly to the opinions of

others, and to be sufficiently men and women to act always upon our own convictions;

"To do our duty as we see it, regardless of the opinions of others, seeming gain or loss, temporary blame or praise:

"To play the part of neither knave nor fool by attempting to judge another, but to give that same time to living more worthily ourselves;

"To get up immediately when we stumble, face again to the light, and travel on without wasting even a moment in regret;

"To love all things and to stand in awe or fear of nothing save our own wrong-doing; "To recognize the good lying at the heart of all people, of all

things, waiting for expression, all in its own good way and time;
"To love the fields and the wild flowers, the stars, the far-open
sea, the soft warm earth, and to live much with them alone, but
to love stringgling and weary men and women and every pulsing
living creature better;

"To strive always to do unto others as we would have them do unto us, In hrief-

"To be honest, to be fearless, to be just, to be kind. This will make our part in life's great and as yet not fully understood play truly glorious, and we need then stand in fear of uothing—life nor death; for death is life.

"Or, rather, it is the quick transition to life in another form; the putting off of the old coat and the putting on of a new; a passing not from light to darkness but from light to light, according as we have lived here; a taking up of life in another form just where we leave it off here; a part in life not to be shunned or dreaded or feared, but to be welcomed with a glad and ready smile when it comes in the earn good way and time."

#### EXTENT OF THE BELIEF IN SPIRITUALISM.

I T is somewhat surprising to learn that Spiritualism has a million adherents in the United States and Canada. Such, however, is the estimate of Mr. Frederick W. Weller, A.M., who states further that fully a quarter of this number are members of Spiritualistic organizations. Writing in *The Metropolitan Magazine* (New York, Jaunary), he says:

"There are 650 local societies of Spiritualists in the United States and in the neighboring Dominion. They represent every phase of human desire for communion with the released souls of loved and honored ones, from that which seeks satisfaction in physical manifestations of the departed spirit's presence to that which, rising to a religio-philosophic plane, finds its life in psychic intercourse or soul-communion; accepting all the truly spiritual teachings of the churches, but adding thereto the new revelation, or, to put it more correctly, the new perception of those relations between all spirits, which, these believers hold. are revealed in the Bible. Of the 650 societies in existence, nearly 300 are circles of believers and investigators, drawn together and held by the personality of mediums whose physical manifestations inspire faith or create wonder. The other societies are representative of the philosophic and religious aspects of spiritualism, many of them being legally incorporated bodies, and not a few of them holding their articles of incorporation in the character of religious organizations, and even as churches, They have their regularly ordained and installed pastors or min-Isters, and maintain Sunday services of worship, which in most respects are precisely similar to those marking the day in churches of a non-ritualistic character. Sunday-schools, or lyceums, for the religious instruction of the young, are a frequent feature in the life of these organizations.

One of the most effective agencies in the propagation of Spiriutalistic ideas is the camp-meeting. At the present time, we are told, there are no less than fifty-five Spiritualistic camp-meeting associations, some of them owning extensive and well-located property. The most noteworthy of these camps is that known as Lily Dalo, near the village of Fredonia, N. V. Mr. Weller continues:

"The workers in the cause of Spiritualism are many and theirgifts are various. About 350 lecturers, pastors, and platform
medlums are engaged in presenting the Spiritualistic thought to
medlum are engaged in presenting the Spiritualistic thought to
chies, or medium, I and addition to these there are not task than
t, 500 psychies engaged in presenting publicity the various phases
of spirit manifestation, while it is estimated that there are some
tooon mediums who exercise their gifts in private. Home
séances and private circles are strong factors in extending and
strengthening the hold which this cut has taken upon the minds
of the people. In many places the largest and most desirable
halls are regularly hired for meeting-places, while there are
about eighty-five churches, temples, auditoriams, and other
buildings in the United States dedicated to Spiritualism.

"Only a portion of the Spiritualists make a religion of their beilef, using it as a means of soal-development, and led by it toward an altruistic relationship with all souls, those embodied in mortals and those which have passed beyond the veil of mortaity. For it must be stated right here that there exists a phase of the Spiritualistic thought which contemplates the possibility of mortals assisting the immortals in their development, as well as the possibility of receiving aid in the spiritual progress which may be made by those still in the flesh."

The Spiritualists do not agree in any formulated creed, but they hold to the soul's immortality, and communication between spirits who have departed from the flesh and mortals still in the body. The immanence of God in the universe is recognized in one form or another. The Spiritualities regard the Bible as the product of inspiration, divine in so far as the divine is continually manifesting itself in that light which comes from the higher life into this through the communion of souls. Jesus, looked upon by Spiritualists as the great psychic of his time, is accepted as a living example and model of sonship to the Deity, and as a teacher whose words of widom are saving, in that they lead to the most perfect development of that sonship in us. Mr. Weller scess on to sav.

"The National Spiritualists' Association stands for the idea that modern Spiritualism is the recognition of universal principles operative in nature; and that spirit return and communication afford the avenue through which immortality is demonstrated. The association adopted a declaration of principles at the annual convention held in Chicago in October, 1800. It declared six propositions. First, we believe in infinite intelligence. Second, we believe that the phenomena of nature, physical and spiritual, are the expression of infinite intelligence. Third, we affirm that a correct understanding of such expression, and living in accordance therewith, constitutes the true religion. Fourth, we affirm that the existence and personal identity of the individual continue after the change of death. Fifth, we affirm that communication with the so-called dead is a fact scientifically proven by the phenomena of Spiritualism. Sixth, we believe that the highest morality is contained in the Golden Rule : 'Whatsoever ye would that others should do unto you, do ye also unto them

"Spiritualism teaches that the event called death is not disastrous, nor a penalty for siu, but an event as natural as birth and presenting unlimited possibilities.

"Ou the practical questions of life that association takes what is commonly regarded as advanced ground in some repects, as in declaring that intoxicating liquors, opiates, tobacco, and unnecessary stimulants should be avoided; in opposing war as unnecessary, and urging the settlement of international disputes by arbitration; and in favoring the abolition of the death penalty for the reason that capital punishment is a relic of barbarian, whilly intical to modern ideas concerning orine causes

Whatever may be the actual truth or error of Spiritualism, concludes the writer, "it is a belief that is full of comfort to those who accept it inonestly and implicitly. It is a religion which, if properly understood, is an inspiration to better living; and in that respect it is entitled to the fairest consideration of even those who find themselves unable to accept what its advocates claim to be truther.

#### RELIGIOUS NOTES.

THE Christian Science movement has made such progress in Germany that it was recently the analytic of delate in the Reichstag. Emperor William has also manifested miterest in the movement, the only with a view to liam has also manifested miterest in the movement, the only with a view to fine the properties of the properties of the properties of the movement of the properties of the movement of t

#### FOREIGN TOPICS.

# THE SALE OF THE DANISH WEST INDIES.

DANISH newspapers do not approve the sale of the Danish West Indies to the United States, and for that reason ignore the subject as a rule. The Journal Politiken (Copenhagen) calls attention to the formation of a Danish steamship line to the islands. The press of the Continent elsewhere gives the subject much attention. The Independence Belge (Brussels) save:

"If the treaty signed in Washington does not provide for a vote of the people, it must be that the United States is opposed. It is not easy to understand the motive of such opposition. The approval of the Antilleans is ecretain, and it is to the interest of the Washington Government to conclidate its new lieges. As for Demmark, she has everything to gain by getting rid of the

Antillean possessions, which are only an expense to her and from which her commerce derives only insignificant advantages, the three isles together have a population of only 32,000 souls. Bagliah is spoken almost exclusively, and commercial relations to the expertation of sugar to the United States, England. and France."

The whole proceedings are of a most humiliating character for Denmark in the opinion of the *Temps* (Paris), which thus amplifies:

"The King is represented as warmly opposed to a transaction that compromises his dignity and brings painful recollections. He will be supported in his attitude by two influences that are not always in accord—the Prince Royal Preferrick and the Prince Waldemar. In the Folkething, or popular assembly, opinion is much divided. The majority of the reform party is said to be favorable to the cession of the Antilles in order to escape thereby any risk of colonial politics, to eliminate a source of international differences, and to help the budget in two ways, by reducing expenses and getting the purchase-money. On the other hand, the Landsthing, or upper house, is practically unanimous in onessition to the transaction."

It will not be difficult to realize the gratification of the United States, according to the *fournal des Dibats* (Paris), at thus rounding out the Porto Rican acquisition. It adds:

"The matter is complicated by the negro question in the United States. In the Danish colony blacks and whites are on a footing of perfect equality, not only politically but socially and otherwise. Hence the black population of these isless will shrink from becoming American. The same sentiment keeps Cuhan people of color, black or brown, hostile to the United States. The North Americans thus gather some of the finite of their exaggerated contempt for the black race."—Translations made for The Literaxy Disease.

#### THE DIVORCE CONTROVERSY IN ITALY.

THE introduction into the Italian parliament of a bill dealing with divorce has precipitated a heated controversy, one of the features of which has been an allocation from the Pope. The Vationa strongly condomns the measure on general principles, its organ, the Ostervatere Romano (Rooms, assiper.

It is impossible to tell to what length the usurping interference of laicality will go with reference to the most grave question of divorce. . . , Certainly, if we are to heed the dictates of the senses and to live according to them, not only is the permanence of the marriage bond tyrannical, but so also are all the natural, divine, or human laws extant. Why do materialists speak of laws? They have no right to do so, for materialism can admit no restrictions whatever upon the will that would be free from restraint. They are bound to use every means to bring about license of manners, at least, However, materialists and their like are not so hypocritical because they make no distiuctions between spiritual and material things. More deceitful are those who wish to seem impartial, among them being doctrinaires of the moderate school. These persons assert that in the matter of divorce they make a distinction in favor of the sacrament of matrimony, allowing full liberty to those who receive it in accordance with the rites of the church to maintain the indissoluble nature of the bond. Divorce, they say, has to do with civil marriage as instituted by the state. The state, which has instituted it, can regulate it and declare it terminable. The civil law. they say, does no violence to the conscience of those who are faithful to the divine law, and does not concern itself about it, allowing full liberty to Catholics. What! The civil law not concern itself, in a Catholic country, with the conscience of the greater portion of those among whom it is administered! And is not this the greatest of imaginable enormities?"

These views are emphasized in the Italian clerical press generally, including the Cronaca Komana and the Lega Lombarda.

The Civiltà Cattolica (Rome) remarks:

"All good Catholice will derive great comfort from the solicitude with which protests are multiplied and addressed to the Government and parliament against the iniquitions design of the divorce bill. If these protests were collected, they would form a volume, and would be eloquent proof of the noble sentiments and public profession of faith of a great number of Italian Catholics of all classes and conditions."

The other point of view is seen in the queries of the Tribuna (Rome):

"Why does the church organization continue its innocuous propaganda against divorce with such fary? Why do the bishops in their electric, the priests in their sermons, Catholic writers in their books, and papers proclaim and maintain still that the divorce bill is an offense to religion and to morals and, if passed, will result in the destruction of the family and the rain of society?... See how many Catholic countries admix and regularly practice divorce willow thereby forfeiling the church's confidence, more than the confidence of the control casy to see why, after so many pacifying experiences, after so many invisible demonstrations, the electrical party continues to repeat throughout Italy the usual refuted arguments, to resume the usual polemics of the bast, to frighten the usual Chrissume the usual polemics of the bast, to frighten the usual Chrisous protest from the
